

RECENTLY PATENTED INVENTIONS. Pertaining to Apparel.

TROUSERS-EXPANDER.—J. SARGH, New York, N. Y. The expander holds the trousers expanded at the inner sides of the wearer's limbs to hide the bow-legged formation, the expander being actuated in a very simple manner from the crotch of the trousers when the wearer is in an erect position, and the expander collapsing when the latter is in sitting position.

BANDAGE-SUPPORT.—C. M. COOKE, New York, N. Y. This bandage is in the form of bands or ribbons wound around the leg of a person afflicted with varicose veins and other ailments. The inventor provides a support for holding the bandage of the type mentioned securely in place, to prevent the bandage from slipping on the leg, and thus allow the bandage to properly fulfill its legitimate functions to the fullest advantage.

Electrical Devices.

MEANS FOR CLOSING AN OPEN TELEGRAPH-CIRCUIT AT A DISTANT KEY.—C. B. JEWELL, La Junta, Colo. The main feature here consists in the provision at a terminal office of an extra switch and circuit, and an extra battery of such higher voltage than the ordinary working batteries that when the battery of higher voltage is switched on to the live wire it will force its current through the resistance around any open key and, by working the relay of that key, apprise the forgetful operator at that station that he has left his key open and thus instruct him to close it.

APPARATUS FOR RECEIVING SUBMARINE SIGNALS.—C. H. MUNDY, Metuchen, N. J. The invention belongs to a class that possesses all the advantages of the others, the same consisting of a sound transmitter exposed directly to the sea and accessible from within the ship, and is distinguished from other inventions of this class in that the transmitter proper may be removed and replaced while the ship is afloat without taking water within the ship.

Of Interest to Farmers.

HARVESTING-MACHINE.—W. LIVTSCHAK, St. Petersburg, Russia. It is rendered possible by this inventor to heap or pile the cut crop in a space on the frame between the main wheel and the finger bar to discharge same in definite heaps upon the ground so that free space is left for the path of the draft animals, and the subsequent binding up into sheaves by hand is facilitated.

Of General Interest.

APPARATUS FOR BUILDING CONCRETE AND OTHER LIKE STRUCTURES.—W. C. POLK, Fort Branch, Ind. Means provide for supporting the forms independently of the concrete, whereby the green concrete will not be strained or broken by the weight of the forms or by removing the forms after the concrete has set; also for releasing and re-setting the forms for repeated elevations as the building of the walls proceeds, whereby the same forms are continually used, and saving time and labor; and to support the forms that they will be held plumb and level and require no more attention in this respect after the support has once been properly set.

WINDOW.—A. C. GODDARD, New York, N. Y. The window has a swinging or a transom sash arranged to insure a tight joint, to render the window dust and moisture proof when closed. The window frames and sashes can be constructed of sheet metal in a very simple and exceedingly durable manner.

METHOD OF MANUFACTURE OF ROSIN SOAP AND THE LIKE.—A. W. CARMICHAEL, Savannah, Ga. In the present patent the invention is an improved method for dehydrating a saponified solution of rosin commonly called "wet pulpy size," in the production of hard rosin soap, which is more especially used by paper mills in the so-called sizing or waterproof process.

Hardware.

TRIM-FASTENING.—A. C. GODDARD, New York, N. Y. The invention pertains to metal doors, windows, base boards, and like structures, and its object is to provide a trim or molding fastening, more especially designed for securely and quickly fastening trimmings or moldings in place without the use of screws, rivets, or similar fastening devices, and without showing exterior projections, holes, marks, or the like.

GRAVITY-LOCK FOR WINDOWS.—A. C. GODDARD, New York, N. Y. The object of this improvement is to provide a lock arranged to automatically lock in case of fire when the sash is closed by fusing of the chain link connection, to securely hold the window locked and to allow convenient and quick unlocking of the window sash and opening the same.

PLUG FOR REPAIRING HOSE.—A. L. MONAGHAN, Houston, Texas. The object here is to produce a plug which is especially adapted for use in repairing a puncture or perforation in a hose. More particularly the object is to give the plug a form that will facilitate its introduction into the puncture, and which will operate to insure that the plug will remain in position.

Household Utilities.

CLOTHES-HANGER.—J. G. MADLAND, Port Angeles, Wash. A purpose in this case is to provide a clothes reel or rack having revoluble action and which can be dropped down to be loaded or unloaded, and which can be readily carried up and secured in an upright position for drying purposes.

CURTAIN-FIXTURE.—J. E. BOSLER, Olean, N. Y. The invention provides a fixture which provides means for supporting curtain poles and shade rollers. Further, it provides a device for use in holding and supporting curtain poles and shade rollers, and adapted to be adjusted to permit its use in connection with poles and shade rollers of different sizes.

Machines and Mechanical Devices.

REEDING-MACHINE.—O. SCHULER and R. GLASER, Paterson, N. J. The machine is particularly useful in warping or harnessing looms for weaving textile fabrics. An object of the invention is to provide a machine by means of which the warp threads used in textile looms can be easily and expeditiously inserted in the slits of reeds used in connection with these looms.

Designs.

DESIGN FOR A PEN-BOX, DESK-TRAY, AND PAPER-WEIGHT.—C. R. SMEAD, Hastings, Minn. The ornamental design for a pen box, desk tray, and paper weight, comprises an oblong, square cornered, and flat topped article with its lower half having a slightly receding base marked or fluted with a continuous row of ornamental indentations.

NOTE.—Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.

PATENTS

INVENTORS are invited to communicate with MUNN & CO., 361 Broadway, New York, or 625 F Street, Washington, D. C., in regard to securing valid patent protection for their inventions. Trade-Marks and Copyrights registered. Design Patents and Foreign Patents secured. We undertake all Patent, Trade-Mark and Copyright Practice, both before the Patent Office and the Courts, and we have special facilities for handling Infringement and other suits in Federal and State jurisdictions. A Free Opinion as to the probable patentability of an invention will be readily given to any inventor furnishing us with a model or sketch and a brief description of the device in question. All communications are strictly confidential. Our Hand-Book on Patents will be sent free on request. Every patent secured through us receives special notice in the Scientific American. Ours is the Oldest Agency for securing patents: it was established over sixty years ago. MUNN & CO., 361 Broadway, New York Branch Office, 625 F St., Washington, D. C.
