Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work.	Legal Notices 60 YEARS' EXPERIENCE PATENTS TRADE MARKS DESIGNS	Car, dumping, C. A. Linustrom. 94 Car fender, C. B. Aibree. 94 Car fender, J. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and	Legal Notices 60 YEARS' EXPERIENCE TRADE MARKS DESIGNS COPYRIGHTS &C. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the ordinary needs and contributing to the conveniences of modern life. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the orveniences of modern life. In the present volume an attempt has been made to deal with this aspect of the subject, and the points of view adopted are different from those of the ordinary textbook. The book is fascinating, and it can be read with profit by almost anyone.	Legal Notices 60 YEARS' EXPERIENCE TRADE MARKS DESIGNS COPYRIGHTS &C. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the ordinary needs and contributing to the conveniences of modern life. In the present volume an attempt has been made to deal with this aspect of the subject, and the points of view adopted are different from those of the ordinary textbook. The book is fascinating, and it can be read with profit by almost anyone. Tables and Diagrams of the Thermal Properties of Saturated and Superheated Steam. By Lionel S. Marks, M.M.E., and Harvey N. Davis, Ph.D. New York: Longmans, Green & Co., 1909. 8vo.; 166 pp. Price, \$1 net.	Legal Notices BO YEARS' EXPERIENCE TRADE MARKS DESIGNS COPYRIGHTS &C. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic projection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the ordinary needs and contributing to the conveniences of modern life. In the present volume an attempt has been made to deal with this aspect of the subject, and the points of view adopted are different from those of the ordinary textbook. The book is fascinating, and it can be read with profit by almost anyone. Tables and Diagrams of the Thermal Properties of Saturated steam which have appeared up to the present time have all been based upon the classic investigations of Regnalt, carried out more than sixty years ago. More recent investigations are the necessary basis for any determination	Legal Notices SO YEARS' EXPERIENCE TRADE MARKS DESIGNS &C. INVENTORS are invited to communicate with Munn & Co 361 Broadway, New York, or 625 F Street, Washington, D. C., in regard to securing valid patent protection for their inventions. Trade-Marks and Copyrights registered. Design Patents and Foreign Patents secured. A Free Opinion as to the probable patentability of an invention will be readily given to any inventor furnishing us with a model or sketch and a brief description of the device in question. All communications are strictly confidential. Our Hand-Book on Patents will be sent free on request. Ours is the Oldest agency for securing patents; it was established oversixty years ago. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the ordinary needs and contributing to the conveniences of modern life. In the present volume an attempt has been made to deal with this aspect of the subject, and the points of view adopted are different from those of the ordinary textbook. The book is fascinating, and it can be read with profit by almost anyone. Tables and Diagrams of the Thermal Properties of Saturated steam which have appeared up to the present time have all been based upon the classic investigations of Regnalt, carried out more than sixty years ago. More recent investigations are the necessary basis for any determination of the experimental results to the values deduced from the thermodynamic theory so	Legal Notices BO YEARS' EXPERIENCE THADE MARKS DESIGNS COPYRIGHTS &C. INVENTORS are invited to communicate with Munn & Co., 361 Broadway, New York, or 625 F Street, Washington, D. C., in regard to securing valid patent protection for their inventions. Trade-Marks and Copyrights registered. Design Patents and Foreign Patents secured. A Free Opinion as to the probable patentability of an invention will be readily given to any inventor furnishing us with a model or sketch and a brief description of the device in question. All communications are strictly confidential. Our Hand-Book on Patents will be sent free on request. Ours is the Oldest agency for securing patents; it was established over sixty years ago. Carlos L. McMaster, M.E. Lansing, Mich.: Published by Wilson & McMaster, 1909. 8vo.; 186 pp. This book is a collection of notes intended to furnish the basis for a course in elementary mechanical drawing, so arranged, it is thought, that the teacher may have the widest latitude in his choice of sequence of subjects. Since the first edition, two years ago, the book has been rearranged with this particular point in view. It has been thoroughly revised, and also enlarged by the addition of more explanatory matter and illustrations in autographic prejection and a chapter on diametric and colique drawing, and a number of chapters on working drawings and sketches. It is an excellent work. The Romance of Modern Chemistry. By James C. Phillips, D.Sc., Ph.D. Philadelphia: J. B. Lippincott & Co., 1909. 12mo.; 348 pp. Price, \$1.50. This book contains a description in nontechnical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold applications in modern life. Probably most people, when they think of chemistry, suppose that its fascination and its practical bearing can be appreciated only by those who have access to some sequestered laboratory, the doors of which are closed to the uninitiated. This is a mistaken view, for in countless ways unknown to the general reader chemical science is supplying the ordinary needs and contributing to the conveniences of modern life. In the present volume an attempt has been made to deal with this aspect of the subject, and the points of view adopted are different from those of the ordinary textbook. The book is fascinating, and it can be read with profit by almost anyone. Tables and Diagrams of the Thermal Properties of Saturated steam which have appeared up to the present time have all been based upon the classic investigations of Regnalt, carried out more than sixty years ago.
