#### THE VALIDITY OF PATENTS

The inexperienced purchaser of a patent does not generally appreciate the importance of having its claims examined, and their validity and scope defined by some person experienced in such mat ters, before parting with his money. It is not unusual for the assignee, just as he is commencing the manufacture of articles under his recently

purchased patent, to find thatitis an infringemen<sup>1</sup> upon some previously issued patent, and that he has not only made a worthless investment, but that he is likely to get mulcted in damages if he proceeds with his manufacture. Cases are continually coming to our knowledge wherein parties have made purchases in good faith, and paid considerable sums of money on the assurances of the patentee and a mere glance at the patent, presuming that all that the drawing of the invention showed was protected by the claims, when, in fact, the point covered was almost infinitesimal. Another manner in which purchasers are sometimes deceived is that the claims, although broad enough and worded properly to cover the invention, contain a single element protected by some prior patent, which covers the very part in the new machine which is necessary to insure its efficiency. The Howe sewing machine patent illustrates this. It protected but little that any of the manufacturers cared to use, except the one small part essential to all sewing machines; and all manufacturers had to pay Howe a royalty, and he derived from that apparently trivial item an immense income.

We therefore recommend any person who is about to purchase a patent, or about to commence the manufacture of any article under a license, to have the patent carefully examined by a competent party, and to have a research made in the Patent Office to see what the condition of the art was when the patent was issued He should also see that the claims are so worded as to cover all the inventor was entitled to when his patent was issued; and it is still more essential that he be informed whether it is an infringement, as above suggested, or not. Parties desiring to have such searches made can have them done through the Scientific American Patent Agency by giving the date of the patent and stating the nature of the information desired. For further MUNN & CO., information, address 37 PARK ROW, New York

#### Advertisements.

Inside Page, each insertion - - - 75 cents a line Back Page, each insertion --- \$1.00 a line. Engravings may head advertisements at the same rate per line, by measurement, as the letter press. Advertisements must be received at publication office as early as Friday morning to appear in next issue.

## Lehigh Emery Wheels. Rumsey & Co., Sencea Falls, say: "Perfectly satisfied they are the best we have ever used." LEHIGH VALLEY EMERY WHEEL CO., Weissport, Pa.

CENTENNIAL

I MPROVEDAIR PUMP

S16 will buy the best double-acting handpump (vacuum or condensing). Other style
for high and low pressures. Combines the advantages of lever and fly-wheel. H. WEINDEL. 460 Dillwyn St.. Philadelphia, Pa.

WANTED—Manufacturers to manufacturer our Double-Toothed Reversed Angle Diamond Files, to upply the demand. References, samples, and instructions given, on application, to parties wishing shop rates. Address J. & J. S. HAPTONSTALL, Adel, Iowa
