

wood, a steam engine or an electrical machine? One horse power will be sufficient. A steam engine is more economical than an electric engine.

Which is the best oilstone, Arkansas or Turkey? A. It is a disputed point as to which is the best. Of Arkansas stones, the most transparent are usually the best.

(35) H. H. P. says: I am manufacturing solid cast steel cultivator shovels, and want the best recipe or preparation to harden them in so as to not warp and crack them, and to harden at as low a heat as possible? A. In tempering, all depends upon the nature of the steel. You will probably find brine at about 100° Fah. answer your purpose. The brine may be made of 1/2 lb. salt per gallon of water. Dip slowly edgewise and deep, and then hold the shovels still in the water.

(36) A. T. says: I have a small steam pump and have cracked one of the steam ports, which is of cast iron. Can I stop that crack so that it will not leak? A. Fill the crack with fine cast iron filings well wetted with water and sufficient sal ammoniac (powdered) to just cause the mixture to heat. If the crack is large, caulk the mixture in; if not, a thin sheet plate may be screwed on in addition to using the mixture.

(37) C. R. H. says: 1. I have a casting of brittle type metal to which I wish to give a light brown color. Is there any acid or pickle in which I could dip it? A. Try a strong solution of sulphide of soda or potassa in hot water. 2. Can you give me a good recipe for copperplating type metal? A. Clean the type perfectly, attach it by means of a copper wire to the negative or zinc pole of a strong battery, and immerse the type in a strong solution of sulphate of copper in water. Place a small sheet of clean copper in the sulphate of copper bath with the type (they must not touch), and connect this by means of a copper wire with the other pole of the battery. Under the above conditions, the type will speedily become covered with a film of metallic copper. A retractor is necessary in cleaning the type to remove every trace of oil and rust, otherwise the deposition will be unequal or will drop off.

(38) P. L. D. asks: 1. Which size of locomotive cylinder is best for passenger traffic, everything else being equal, a cylinder 17 inches in diameter and of 22 inches stroke, or 16 inches in diameter and of 24 inches stroke? A. The 16 x 24 is generally considered preferable. 2. Which is the best for both freight and passenger traffic, everything else being equal, 16 inches diameter of cylinder, 24 inches stroke, and 5 feet diameter of driver, or 17 inches diameter of cylinder, 24 inches stroke, and 5 1/2 feet diameter of driver? A. The 16 x 24 inch cylinders with 5 feet driving wheels.

(39) J. R. McN. says: I have read your article headed "Bell Metal." How are the metals melted and mixed? A. Use a blacklead crucible and a small crucible furnace with a good draught. Fuse the copper first, then add the nickel in small grains, and proceed as directed in the recipe. Stir the fused alloy from time to time with a stick of green wood.

(40) H. A. W. asks: 1. How fast is an iron turning lathe required to run when turning 1 inch wrought iron? A. At about 130 revolutions per minute? 2. How fast should a wood turning lathe run when turning 2 inch hard wood? A. It may run at speeds varying from 200 to 4,000 revolutions per minute, but about 1,000 is usual on an ordinary lathe.

(41) J. G. says: We have been making a few board rules for our own use. What is the best stuff to blacken the figures with? A. Use black japan varnish. It is usually applied with a stencil and brush.

(42) J. B. C. asks: What is the best method of testing the value of precious stones? A. Precious stones are usually recognized by color, shape, hardness, specific gravity, etc.

(43) S. & R. ask: Which would be the simplest and most durable way to raise a column of water, 1 foot in diameter, to the height of about 40 feet, and how much power would it take? A. We think a pump would be the cheapest and simplest device. The power will depend upon the amount of water lifted. The pressure per square inch will be about 175 lbs., exclusive of friction.

(44) E. H. says: I am about to build a boat on the following plan: She is to be a double ender propeller, with 40 feet keel, of 13 feet beam and 5 feet hold, with a shaft running through the whole length and a wheel on each end, to be used as a ferryboat. Her draught is not to exceed 4 feet. Do you think a boat on that plan and those dimensions will succeed? Will she steer well, and will the engines work all right, the shaft running the whole length of the boat? A. We do not see any impracticable features in the plan, although we are not sure that it is the best that could be devised.

(45) M. B. says: 1. We have a well 10 feet deep and 106 feet from the house; we want to draw the water from this well by a cast iron cistern pump and a 1 1/2 inch lead pipe; this lead pipe has to make a bend upward under the house of 10 feet to connect with pump. Can we draw water such a distance by said pump? A. With a good pump the plan is practicable. 2. Would a lead pipe of the above size collapse? A. Make the bends with as large radii as possible, and be careful to straighten the pipe before laying it. It will, of course, be desirable to use heavy pipe.

(46) E. R. says: We are building a steam yacht 40 feet long and of 8 feet beam, for which we have a double engine with cylinders of 5 inches bore and 6 inches stroke. We would like to know the size and form of boiler best adapted for the engine. A. You can use a vertical boiler, 40 inches in diameter, and 6 feet high.

(47) J. S. says: Since the Ashtabula bridge disaster, there is a great deal said about iron becoming crystallized from repeated vibration, caused by jars, strains, etc. In that sense, is the term "crystallized" used correctly? Is not iron in all conditions crystallized? As I understand it, the strength of iron depends on the perfect cohesion of the crystals which compose it. By jar, vibration, strain, and constant use, the cohesion of the crystals becomes impaired, and the strength weakened; and in that condition I think it wrong to call it crystallized. A. The term is correct as describing the appearance of the iron. Good iron when broken looks

fibrous, or somewhat as if it were made up of very fine wires.

(48) J. L. N. says: We have an engine with cylinder 28 inches in diameter and of 6 feet stroke, running 28 revolutions per minute, geared (with cog gearing) into a countershaft running 56 revolutions per minute. We increase the speed of our engine to 46 revolutions per minute, allowing the countershaft to remain at the same speed (56 revolutions), shall we consume more or less fuel? A. Without knowing more particulars, we cannot answer this question positively; but the chances are greatly in favor of a less consumption of fuel, if the change is made.

(49) W. D. C. says: I have a waterfall of 75 feet of a constant stream of water that will fill the space of 1 1/2 inches square. Is there any kind of arrangement by which I can get power from said waterfall, and how much? A. Probably a water wheel will be the most convenient machine for utilizing the power of the water. You will find the advertisements of reputable manufacturers in our columns.

(50) D. H. says: On p. 241, vol. 32, you give 6 angles for slats of a windmill, and there are but 5 sails or slats on each arm of the mill. Please explain. A. You cannot have examined the article very carefully, as the figure shows 6 slats or arms, and the proper angle for each is given below.

(51) W. F. W. asks: What is the correct definition of the word compound, as applied to steam engines? Does it include simply that class in which the exhaust steam from one cylinder is utilized in a second, or would two high pressure engines, connected with a common shaft, and whose cranks were keyed at right angles with each other, also come under this head? A. Your first definition is the one commonly applied to compound or two-cylinder engines. The other describes what are usually called double engines.

(52) R. E. McC. says: Some mechanics and I have disputed about a dead center in a revolving shaft. I claim that there is no such a point in existence; but we cannot agree on it, so I appeal to you for an answer. A. If you speak of the ordinary piston and crank connection, it is well known that there are several points called dead centers, for the reason that at these points a pressure applied to the piston produces no effect on the revolution of the shaft.

(53) C. E. H. says: In small yacht engines, running as high as 300 revolutions per minute, can the feed pumps be advantageously worked from the cross-head as in slower moving engines, or is it necessary to work them slower by means of intermediate gearing? A. The pump can be worked at this speed, but it generally requires larger connections.

MINERALS, ETC.—Specimens have been received from the following correspondents, and examined, with the result stated:

J. E. S.—It is sandstone, containing crystals of millerite, a sulphide of nickel.—T. D. H.—It is a poor variety of fireclay, containing much sand and iron. It is probably worth about \$3.00 per ton in New York.—J. R. B.—It is an impure clay, silicate of alumina.—D. A.—It contains mica and sesquioxide of iron.—F. E. S.—The soft argillaceous material contains clay, carbonate of lime, and magnesia, colored with sesquioxide of iron and chromium, and mixed with sand. The other is Niagara limestone, and may be employed for building purposes or as a source of lime.—F. A. S.—It is a piece of red jasper containing a small quantity of gold. It would require a quantitative analysis to determine the percentage of metal in the ore.—W. R. L.—It is graphite of good quality; graphite and plumbago are different names for the same substance.—J.—Your specimen contains manganese and iron.—C. J.—It is sesquioxide of iron with clay.

A. B. asks: How is the cut which runs around the tops and backs of violins made, and how is the wooden thread inserted in the same? How is the deep staining varnish put on, so that the grain of the wood may be seen?—H. A. asks: Please give a recipe for making paste for whitening leather military belts?—C. F. S. asks: How can I keep goats from peeling the trunks of apple trees?—W. S. G. asks: How can I press hay into small blocks, to burn in a stove?

COMMUNICATIONS RECEIVED.

The Editor of the SCIENTIFIC AMERICAN acknowledges, with much pleasure, the receipt of original papers and contributions upon the following subjects: On Electrical Experiments. By J. D. W. On the Steam Engine of the Future. By J. C. S. On Materialism and Spiritualism. By J. T. Also inquiries and answers from the following: I.—C. H., Jr.—M. C.—C. Y. G.—C. C. D.—W. C. F.—R. B.—J. T. S.—C. H. W.—R. K.

HINTS TO CORRESPONDENTS.

Correspondents whose inquiries fail to appear should repeat them. If not then published, they may conclude that, for good reasons, the Editor declines them. The address of the writer should always be given.

Inquiries relating to patents, or to the patentability of inventions, assignments, etc., will not be published here. All such questions, when initials only are given, are thrown into the waste basket, as it would fill half of our paper to print them all; but we generally take pleasure in answering briefly by mail, if the writer's address is given.

Hundreds of inquiries analogous to the following are sent: "Who sells plumbago, for stove polish? Who sells a steam engine, small enough to run a single sewing machine? Who rolls weldless steel tyres? Who makes earth-boring tools? Who makes paper barrels? Who sells small water wheels for running sewing machines, and who sells electric motors for a similar purpose? Who exhibited dental suction disks at the Centennial? Who sells small engines, suitable for pleasure boats? Who sells electric batteries, for plating?" All such personal inquiries are printed, as will be observed, in the column of "Business and Personal," which is specially set apart for that purpose, subject to the charge mentioned at the head of that column. Almost any desired information can in this way be expeditiously obtained.

OFFICIAL. INDEX OF INVENTIONS FOR WHICH Letters Patent of the United States were Granted in the Week Ending February 27, 1877, AND EACH BEARING THAT DATE. [Those marked (r) are reissued patents.]

A complete copy of any patent in the annexed list, including both the specifications and drawings, will be furnished from this office for one dollar. In ordering, please state the number and date of the patent desired, and remit to Munn & Co., 37 Park Row, New York city.

Table listing various inventions and their patent numbers, including items like Air compressor, Alkalies recovering, Ash sifter, Axle boxes, Baggage check guard, Bale tie, Base ball, Bed bottom spring, Bed bottom, spring, Gruwell & Newhouse, Bed bottom, spring, S. P. Olney, Bedstead, invalid, J. Q. A. Sargent, Bee hive, A. H. Russell, Billiard table, J. Marsden, Boat knee, D. True, Bolting reel, Bennett & Smith, Box for case hardening, J. Greene, Box nailing machine, A. P. Goodhue, Branding stamp, J. D. Trapp, Broom hanger, W. Altick, Bung cutting machine, M. H. Wiley, Burglar proof safe door, H. Herman, Butter box, N. Waterbury, Butter dish, A. C. Townsend, Can for oil, etc., J. G. Evenden, Can, metallic, G. H. & J. H. Perkins, Car axle box, J. Elder, Car brake, Laubach et al., Car couplings, E. T. DESIGNS PATENTED.

9,760 to 9,766.—CASSIMERE.—H. A. Kimball, Pascoag, R. I.  
 1,707.—CANS.—E. Norton, Chicago, Ill.  
 9,768.—CARPET.—T. J. Stearns, Boston, Mass.  
 6,769.—VASE.—W. Tweeddale, Brooklyn, N. Y.

[A copy of any of the above patents may be had by remitting one dollar to MUNN & Co., 37 Park Row, New York city.]

Advertisements.

Inside Page, each insertion --- 75 cents a line.  
 Back Page, each insertion --- \$1.00 a line.  
 Engravings may be had at the same rate per line, by measurement, as the letter press. Advertisements must be received at publication office as early as Friday morning to appear in next issue.

VALUABLE PATENT FOR EXCHANGE IN SOUTH-ERN States, for something equally good North or East. For particulars, address "PATENT," care of N. W. Ayer & Son, Phila.

NOW READY.

ILLUSTRATED HISTORY OF THE CENTENNIAL EXHIBITION OF 1876.

The full History and Progress of the Exhibition, Maps of the Grounds, Engravings of the Buildings, and accounts of all the most notable Scientific and Mechanical objects, profusely illustrated with engravings, are given in this Scientific American Supplement for the year 1876. This work consists of Two Large Volumes, comprising over 800 quarto pages, equal in quantity of reading matter to over Seven Thousand ordinary book pages. The space devoted to the great INTERNATIONAL EXHIBITION is very extensive, and probably forms the most complete and full history of the affair that can be obtained. The illustrations pertaining to the Exhibition are more than 450 in number. A copious Special Index of all matters relating to the Exhibition is given. Those who desire to possess a complete and splendid illustrated Record of the Centennial Exhibition should have the SCIENTIFIC AMERICAN SUPPLEMENT for 1876.

In addition to this splendid History of the Centennial Exhibition, the SCIENTIFIC AMERICAN SUPPLEMENT for 1876 contains a vast amount of other matter of great value for reference and preservation. It presents to the reader, in attractive form, full accounts of the Advances made during the year in all the chief departments of Science and Useful Arts, covering the progress in Chemistry and Metallurgy, Mechanics and Engineering, Electricity, Light, Heat, Sound, Architecture, Photography, Technology, Agriculture, Botany, Horticulture, Rural and Household Economy, Materia Medica, Hygiene, Natural History, Zoology, Microscopy, Meteorology, Terrestrial Physics, Geography, Geology, Mineralogy, Astronomy. The whole illustrated by over Two Thousand Six Hundred Engravings. The wide scope of this splendid work, its surprising variety of contents, its wealth of illustration, render it the most valuable contribution to scientific literature extant, while in price it is probably the most economical. THE SCIENTIFIC AMERICAN SUPPLEMENT for 1876, complete, is supplied, stitched in paper covers, at the low price of \$5. Strongly bound, both volumes in one book, cloth, ornaments with gilt, \$6.50. Bound in two separate books, \$4 each, or \$8 for the two. Sold at the leading Bookstores and News Offices, and by

MUNN & CO., Publishers,  
 37 Park Row, New York.

FOR SALE OR RENT AT NORWALK, Conn., Machine Shop, 30x70, with Water and Steam Power, complete set of Machinery for Repair or Manufacturing. Shop located in centre of village. Rent \$500. S. E. OLMSTEAD.

SENT FREE!

LEFFEL  
**Wheel Book.**  
 PRICE REDUCED.  
 Sent at once for new Wheel Book for 1877, containing  
**LARGE REDUCTION**  
 of prices on the Leffel Wheel.  
 ADDRESS  
**JAMES LEFFEL & CO.,**  
 Springfield, Ohio, or 109 Liberty St., N. Y.

GLASS CYLINDERS, PERFECTLY TRUE, AND TEMPERED in oil on the La Bastie Process. Warranted not to break. T. DEGNAN, 129 Milk St., Boston, Mass.

**N. F. BURNHAM'S**  
 1874  
**WATER WHEEL**  
 Is declared the "standard turbine," by over 600 persons who bought and use them with part and full gate open.  
 Pamphlets Free.  
**N. F. BURNHAM, York, Pa.**

**WE ENAMEL**  
 in FINE JET BLACK every variety of turned wood work parts of machinery, castings, tin-ware and other metal work ENAMELED JET GOODS in wood or metal, made to order. AMERICAN ENAMEL CO., WAREHOUSES, PROVIDENCE, R. I.

A FLY-WHEEL ACCIDENT.—With drawings, showing the faulty construction of the fly wheel, the reasons for the breakage; with practical directions for the avoidance of such occurrence. By Joshua Rose. SCIENTIFIC AMERICAN SUPPLEMENT No. 30. Price, 10 cents.

**OTIS' SAFETY HOISTING Machinery.**  
 OTIS BROS. & CO., No. 348 Broadway, New York.

CONCRETE DOCKS OF NEW YORK.—With two engravings, showing the Foundations of the Docks and the method of making the Concrete Blocks. SUPPLEMENT No. 23. Price, 10 cents.

50 Visiting Cards, with name, 10c, and stamp. Agents Outfit 10c. L. C. COE & CO., Bristol, Ct.

**RISDON'S IMPROVED TURBINE WATER WHEEL**  
 Yielded at the test of Turbines at Centennial Exposition the best results at all stages of gate. Send for circular to  
**T. H. RISDON & CO.,**  
 Mt. Holly, N. J.  
 Manufacturers of MILL MACHINERY.

**THE TRADE ENGINE.**  
 Noiseless in operation—Perfect in workmanship—all light parts of Cast Steel.  
 Every Engine indicated, and valve corrected to give the highest attainable results.  
 Warranted superior to any semi-portable Engine in the market!  
 Send for Price List and Circular.  
**HERRMANN & HERCHEL-RODE M'FG CO.,**  
 Dayton, Ohio.

Territory of The Perpetual Ice Cream Freezer for sale. Send for circular. S. B. COOPER, Bloomington, Ill.

**PUNCHING PRESSES.** Drop Hammers and Dies, for working Metals, &c. THE STILES & PARKER PRESS CO., Middletown, Conn.

**WOODWORTH SURFACE PLANERS.** \$25. Planers and Matchers, \$350. S. C. HILLS, 78 Chambers Street, New York.

**AMATEUR PHOTOGRAPHIC APPARATUS.** Latest invention. Everybody can operate with perfect success. Complete with chemicals from \$5 to \$25. Enclose stamp for circulars.  
**E. SACKMANN & CO.,** 654 DeKalb Ave., Brooklyn, N. Y.

**WESSELL METAL, A PERFECT IMITATION** of gold in color, surface, and acid tests, for manufacturers of imitation jewelry, and other workers in fine yellow metal. Wessel Manufacturing Co., No. 317 E. 22d St., N. Y.

**1 SECOND-HAND IRON PLANER, 3 FT.** long and 16 x 16.  
**1 Second-hand Gear Cutter.**  
**1 Second-hand Bolt Cutter for sale cheap.**  
 Address, H. L. SHEPARD, Cincinnati, O.

PARIS EXPOSITION OF 1878.

To Manufacturers, Inventors, and others. The advertiser, an American citizen and resident of Paris, desires to represent American Manufacturers and Inventors at the Grand Exposition to be held in Paris in 1878. A practical knowledge of the languages and modes of business in both countries, together with unexceptionable references (official and other), insure peculiar advantages to those who desire to avail themselves of the advertiser's services for the introduction of their products in the French market.  
 For information as to Rules and Regulations and other particulars, address, C. S. HOLMES, Box 245, P. O., N. Y.

**CEMENT SEWER, CULVERT, WELL, AND CHIMNEY** Pipe Machinery.  
**E. DAYTON & SON, Meriden, Ct.**

**WIRE-DRAWING MACHINERY, SAW-MILLS-Planers, etc., made by**  
**S. HEALD & SON, Barre, Mass.**

**SALESMEN** wanted to solicit orders for our goods. Permanent employment on salary or commission. Add. Union Industrial Works, Cincinnati, O.

**LOCOMOTIVE ENGINEERING.—THE** most recent and best examples of Locomotive Construction, with scale drawings, tables of principal dimensions, general description, etc., are given in the SCIENTIFIC AMERICAN SUPPLEMENT. The following may be had at this Office, or ordered through any Newsdealer. Sent by mail prepaid. Please order by the numbers here given.  
 Express Locomotives of the London, Chatham and Dover R. R. Tank Locomotives. With Specifications, Dimensions, Particulars and three Engravings. Supplement No. 22. 10 cents.  
 Baldwin Locomotive.—Large engraving in sectional elevation, with measures, scale, and table of dimensions. Supplement No. 35. 10 cents.

**SPECIAL MACHINERY, TOOLS, MODELS, AND** Patented Articles made to order by A. A. POOL & CO., 55 R. B. Ave., Market St. Station, Newark, N. J.

**WROUGHT IRON BEAMS & GIRDERS**

**THE UNION IRON MILLS, Pittsburgh, Pa.,** Manufacturers of improved wrought Iron Beams and Girders (patented). The great fall which has taken place in the prices of Iron and especially in Beams used in the construction of FIRE PROOF BUILDINGS, induces us to call the special attention of Engineers, Architects, and Builders to the undoubted advantages of now erecting Fire Proof structures; and by reference to pages 52 & 54 of our Book of Sections—which will be sent on application to those contemplating the erection of fire proof buildings—THE COST CAN BE ACCURATELY CALCULATED. The cost of insurance avoided, and the serious losses and interruption to business caused by fire; these and like considerations fully justify any additional first cost. It is believed, that were owners fully aware of the small difference which now exists between the use of Wood and Iron, that in many cases the latter would be adopted. We shall be pleased to furnish estimates for all the Beams complete, for any specific structure, so that the difference in cost may at once be ascertained. Address  
**CARNEGIE, BROS. & CO., Pittsburgh, Pa.**
