Are the brain, and the moral and intellectual processes find paramount in physical nature? This is the final probour social life."

## WAY.

In presenting some facts illustrative of the progress in result of long experience, and these become the inflexible weighing mere superficial appearance. and governing law, whether it be a mechanical measurement or a matter of policy, and subordinates are rigidly held thereto, no departure being permitted. A somewhat amusing illustration of this occurred recently, when a friend, traeling on their line on a pass issued to him as the company's guest, because of an informality therein, and having insufficient funds to buy a ticket, had presented to him by the conductor the alternative of getting off the train or depositing his watch as security. Being a sensible man he appreciated the situation, surrendered his time-piece, and continued his journey, receiving his property back in due time with a polite explanation from the company's office. The conductor had no discretion in the matter, and courteously maintained the regulation for such case made and provided. This inflexibility might appear to defeat progress in certain departments, but to prevent this tendency, the company maintains a corps for the express purpose of conducting experiment, working test, and, if demonstrated to have real value, is adopted, but is not, prior to its adoption, allowed to affect now being in progress.

question of the energy of the human machine. Joule's state- any of the railway company's operations in the slightest de-

A recent article furnished some interesting facts relative ing, we are driven to the conclusion that it is the total heat to the running of their trains under the block system, and within and without that ought to be regarded as the real it is proposed herein to explain the method by which their calorific effect of the oxidation within the body." A man | magnificent roadway is maintained in such superior condiweighing 150 pounds consumes, we are told, in lifting his tion. To begin with the official organization of the comown body to a height of 8 feet, the heat of a grain of carbon. pany is such as to secure with a proper distribution of labor

The entire line is divided into three grand divisions, sevpounds. When dried they are reduced to 15 pounds. Were erally known as the New Jersey, the Pennsylvania, and the the oxidation corresponding to a day laborer's ordinary work. Philadelphia and Erie. Over the whole there presides, inde exerted on the muscles alone, they would be wholly con-pendent of the Board of Direction, one general manager and of saying that nothing can be regarded as a proper trade sumed in 80 days. It is but a step further on to ask what two engineers, one of the latter having charge of bridges enables the production of bodily motions, and to enquire and buildings, the other of maintenance of way. Each di- be consumed with it; for if that were the rule, a mark upon whether it is the action of the will. The answer is that the vision is under a general superintendent, and being divided a cake of soap, a symbol in the sole of a shoe, and many will is mediate, not direct. The nerves controlled by the into sections of about 100 miles each, called sub-divisions, other forms of devices which might be mentioned, and brain pull, as it were, the trigger, but the gunpowder which for each of which there is a division superintendent. These which are undoubtedly excellent trade marks, would lose they ignite is stored up in the muscles. "We all know the subdivisions are again divided, say into three parts, over their character and value as such from the mere fact that effect produced on a nervous organization by a slight sound each of which is a supervisor. Under him are sub-division the use or consumption of the article would also result in which causes affright. An aerial wave, the energy of which foremen, having 2½ miles of track each to work and keep in the destruction of the mark. would not reach the minute fraction of that necessary to order. The number of men allowed to these foremen is deraise the thousandth of a grain through the thousandth of an termined by the peculiarities of the locality, more men be material, which is essential in the structure of the article, inch, can throw the whole human frame into powerful me- ing necessary for difficult sections, as in the mountain regions or wherever the trackway is exposed to exceptional in, for the mere purpose of distinguishing the origin or danger.

The important relation of the condition of a road argument-nothing has been advanced which rises to any way to its carrying capacity, and the economical manageother level than that of plain scientific truths which no one ment of the traffic over it, was so evident that it was detername, symbol, figure, letter, form, or device, cut, stamped, can hesitate to accept. But now comes the question: What mined to develop the highest possible standard of excellence cast, impressed, or engraved thereon, or in some other manin this department. The various engineers, superintendents Who or what is it that sends and receives massages through supervisors, and other practical men, met in consultation to may be a proper trade mark. The trade mark need not be the bodily organism? The query is answered thus: "You pic- decide what various items were essential to the production inseparably connected with the package, as when blown ture the muscles as hearkening to the commands sent through of a perfect road. Suggestions were made and discussed the motor nerves; you picture the sensor nerves as the vehi- fully, after which short sections were ordered, constructed of distinguishing the goods as being of a particular manucles of incoming intelligence; are you not bound to supple- according to the plans agreed on, and when ready these facture, or as belonging to a particular party. There could ment this mechanism by the assumption of an entity which were inspected and criticised by the same officers, some be, therefore, no legitimate objection to the trade mark uses it? Are you not forced by your own exposition into the modifications suggested, and still further improvements de-'sought to be registered by Gordon, on the mere ground that hypothesis of a free human soul?" Henceforward the whole veloped. This sample track was as nearly ideal in every it was connected so intimately with the article to which it drift of the address changes—persuasion and abstract argu- particular as it could be made, as to solidity, evenness, ment replace scientific deduction; but the speaker has proved drainage, joints, ties, etc., while the surface was finished the article itself. us necessitarians by necessity, and then, lest the dilemma with all the care and accuracy of that of a drive in Central

## NOTES OF PATENT OFFICE DECISIONS.

In Gordon's case, just decided by the Acting Commissioner of Patents, the trade mark sought to be registered was described as a narrow strip of leaf tobacco placed as a wrapper around the mouth piece of a cigarette.

It was held by the Examiner of Trade Marks that the above matter claimed, as a trade mark, was a functional part of the cigarette and was consumed with it; that, in fact, it entered into the mechanical structure of the article itself, and therefore was not an arbitrary symbol or a lawful

It will do, however, to carry this doctrine to the extreme mark which is so intimately connected with an article as to

A distinction must be made in these cases, between the and unessential matter placed thereon or incorporated thereownership of the article.

Thus the box, barrel, or wrapper containing merchandise, whatever its form, cannot, per se, be the trade mark; but a ner attached thereto, or connected with the article itself, into glass, but it must have the independent and sole quality was attached as to necessitate its consumption with that of

But there was a serious objection to the registration on the ground that it did not perform the sole office of a trade mark. When completed to the satisfaction of all, the sub-division No one has a right to appropriate to his own use, as a trade foremen and others were referred to it as the standard, and mark, a device which, from the nature of the use to which brought to a like condition.
