Second, since the volume of heating gas required throughout a given district will be largely in excess of the volume demanded for light, the percentage of leakage through defective mains will be proportionally less. Third, the loss in dollars and cents by leakage will be in proportion to the respective cost Truly yours,

M. H. STRONG.

## AN IMPROVEMENT ON TEA CHROMOS.

The desire to have something "thrown in" with every intelligent classes of humanity, leads to some comical results in trade. Multitudes of people have cheerfully paid two dollars and a half for a paper they didn't want, for the sake of getting a fifty cent chromo. And to judge from the windows of uptown tea and coffee shops and corner groceries, the gift of a ten cent picture or a chance to win a pair of ugly vases is a much more powerful attraction to small buyers than superior goods or moderate prices. The absurdity of expecting shop keepers to give away something for nothing, even when that something is intrinsically worth-The number of awards to American exhibitors at the cent of which is formed of the three most valuable heat-less, does not seem to appear to the customers of such prize giving shops. They always have something thrown in, and that insures a good bargain.

> The practice began, we believe, in England, where it is still a profitable "dodge," The only drawback seems to be that people ultimately get their houses fully stocked with pictures and other trumpery, and then they want something more substantial. This has led a Glasgow house to introduce a "new system," which consists in giving each buyer of ten the sugar to sweeten it " for nothing," at the rate of four pounds of sugar for one pound of tea. How much more than the cost of the sugar they add to the price of the tea they prudently refrain from telling. Not to be outdone, a Swansca tea company offer to give on certain days a hat worth five shillings with every pound of tea, or if the pur-

> This is much better than chromos, even if the hat is not a work of art; and doubtless the tea is just as bad in the new system as in the old.

> It is one of the misfortunes of people of narrow means that they have to buy the necessaries of life in small quanevery diminution of the size of the package. Yet it is safe to say that most poor people pay far more for their limited purchases than they might, were their buying more intelligently done. Indeed a frequent cause of poverty is the inability to turn thriftily the proceeds of industry. They never learn the lesson that while it is pleasant to think that the sugar is "thrown in" with the tea, they are sure to have to pay for it, perhaps doubly.

#### A SOUTH AUSTRALIAN OFFER FOR AN IMPROVEMENT.

South Australia is rapidly becoming a great grain-growing rifle, for example, at the Springfield armory, is \$54; yet Mr. Edison's alleged discovery, or its precise bearing upon country; and, like all new countries, finds its capacity of private companies are willing to furnish in quantity an the business of gaslighting as now conducted, I desire to production most seriously limited by the lack of labor, more suggest the possibility of its being to the coal-gas men a correctly perhaps by a lack of labor low priced enough to enable producers to get their products to distant markets at Should electric supersede gas lighting, how shall the gas a profit. The only solution of this difficult problem lies companies employ their plant? The coming change from through the use of machinery which will make the labor of one man produce as much as many men can unaided. And lying further from the great grain markets of the world than other great grain producers, Australia has the more urgent need of machinery which will lessen the cost of her staple gas, similar to that investigated by Dr. Moore, is, in point cereals. Accordingly the government of South Australia has offered a reward of \$20,000 to the inventor of the "best machine combining within itself the various operations at the same time of reaping and cleaning, fit for bagging on the field, the various cereal crops of South Australia.'

The competitors for the prize will be tested in December, 1879, with especial reference to their strength durability. The nations which have the best field guns and heavy country, and the evidence is conclusive that it is there ef- lightness of draught, cost, work done, results of cleaning, gas in London and Liverpool is supplied at about one dollar must be an improvement on any in use in the province; and ernments have liberally appropriated money for the manu- per thousand cubic feet, but we must not forget that coal is then the bonus will be paid over only on condition that the

The direct result would be that the country would the consumer at one-fifth the price of ordinary coal gas? be far better armed than now, at far less cost, and at the same Gas companies are not usually communicative as to the time the foreign trade made possible would give employ- cost of gas either in the holder or at the consumer's meter.

ment to millions of money and thousands of men. Considerable experience enables me to say that in New The government is a large consumer of paper and en- York and Brooklyn the manufacturing cost of coal gas is velopes; it does not find it necessary, however, to engage in not less than sixty cents per thousand, but I desire to be on the manufacture of these commodities. By giving its con- record as asserting that the heating gas of which we are tracts to the lowest bidder the government gets what it re- speaking can be in most of our Northern seaboard cities study of the different strides, that the positions of the fore quires at much lower rates, probably, than government manufactured and delivered into the holder ready for distri- legs in D should he reversed, that is, the right leg should mills could secure, and at the same time advances private bution at a cost not exceeding ten cents per thousand, where be straight and the left bent. Again, in 9, the left fore leg enterprise, instead of counteracting it. True, in selling the production is equal to one million cubic feet daily. should be advanced and the right bent under the body.

To what extent American machines, accomplishing the ends in view, have been introduced into South Australia. we do not know; it is evident, however, that the competition, if there be any, will lie between such machines and possible improvements of them. It is evident, also, that the successful competitor will gain the lead in a very wide and advantageous market, from which the profits are likely to be far greater than the bonus offered. Our manufacturers and inventors may find the field worth cultivating.

# A Correction.

Owing to the indistinctness of the photographs from which were made the drawings illustrating a horse's motion (SCIENTIFIC AMERICAN, October 19), the figures D and 9 were incorrectly drawn. It is clear, from a more critical
