AMERICAN INSTITUTE OF THE CITY OF NEW YORK New York, October 14, 1878. R. J. CHARD, ESQ

134 Maiden Lane, New York

Dear Sir:-For your exhibit at Forty-sixth Exhibition. of Lubricating Oils, "The Medal of Superiority" has been awarded, based upon practical test made by Prof. R. H. Thurston, of Stevens Institute. The medal will be prepared, and you will be notified when ready for Yours,

CHAS. WAGER HULL, General Superintendent.

TO INVENTORS.

An experience of more than thirty years, and the preparation of not less than one hundred thousand applications for patents at bome and abroad, enable us to understand the laws and practice on both continents, and to possess unequaled facilities for procuring patents everywhere. In addition to our facilities for preparing drawings and specifications quickly, the applicant can rest assured that his case will be filed in the Patent Of-fice without delay. Every application, in which the fees havebeen paid, is sent complete-including the modelto the Patent Office the same day the papers are signed at our office, or received by mail, so there is no delay in filing the case, a complaint we often hear from other sources. Another advantage to the inventor in securing his patent through the Scientific American Patent Agency, it insures a special notice of the invention in the SCIENTIFIC AMERICAN, which publication often opens negotiations for the sale of the patent or manufacture of the article. A synopsis of the patent laws in foreign countries may be found on another page, and persons contemplating the securing of patents abroad are invited to write to this office for prices. which have been reduced in accordance with the times. and our perfected facilities for conducting the business Address MUNN & CO., office Scientific American.

Business and Lersonal.

The Charge for Insertion under this head is One Dollar a line for each insertion: about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

Vertical Engines, 10 to 15 H. P., thoroughly wellmade. John Hartrick & Co., 47 Gold street, New York.

Magic Lanterns and Stereopticons of all prices. Views illustrating every subject for public exhibitions. Profitable business for a man with a small capital. Also lanterns for college and home amusement. 74 page catalogue free. McAllister, Mf. Optician, 49 Nassau St., N.Y.

The Asbestos Roofing is the only reliable substitute for tin, it costs only about one half as much, is fully as durable, and can be easily applied by any one. H. W. Johns Manufacturing Co. are the sole manufacturers.

Northrop's Sheet Iron Roofing makes most durable fireproof roof. Used on all kinds of buildings. Send for

circular and prices. Northrop & Co., Pittsburgh, Pa. Engines, 1/2 to 5 H. P. Geo. F. Shedd, Waltham, Mass

Mail Bag Locks and Fastenings. New Patent. Valu able. Address D. J. Miller, Santa Fe, New Mexico

Wanted.—Second-hand 1 to 3 H. P. Boiler and Engine. Address H. A. Johnson, Medina, N. Y.

For Sale Cheap.—One Horizontal Engine, 18 in. x 36 in.; one Plant Hoisting Engine, four drums; and two 25 H. P. Vertical Engines. Apply to Wm. Taylor & Sons, 25 Adams St., Brooklyn, N. Y.

New Hand, Foot, or Steam Band Saws that will cut 7% in. thick; price \$35. G. W. Baker, Wilmington, Del. Giant Car Pusher. Tackle Block Works, Lockport, N.Y.

Gold, Silver, and Nickel Plater wants a situation. Address Plater, Waterbury, Conn.

Wanted.-Low priced, second hand Lewis, Oliver & Phillips Bolt Header. G. C. Chase, Manchester, N. H. H. Prentiss & Co., 14 Dey St., N. Y., Manufs. Taps, Dies, Screw Plates, Reamers, etc. Send for list.

Extension of time.—Proposals for Jacksonville Water Works will be received until November 21, 1878. See advertisement page 237, October 12, 1878.

Emery in bbls. and cans, all numbers, Polishing Sup plies. Greene, Tweed & Co., 18 Park Place, New York.

Right to manufacture a salable patented article desired by an old established house; would pay royalty or

purchase. G. Thomas, Box 23, West Troy, N. Y. Useful Books for Engineers and Mechanics. Catalogues free. E. & F. N. Spon, 446 Broome St., New York. Wanted.—A foundry foreman with experience in melting for malleable and gray castings. Address, stating wages expected, references, etc., 2116 Market St., St. Louis, Mo.

Dead Pulleys, that stop the running of Loose Pulleys and Belts, taking the strain from Line Shaft when Machine is not in use. Taper Sleeve Pulley Works, Erie, Pa.

Pulverizing Mills for all hard substances and grinding purposes. Walker Bros. & Co., 23d and Wood St., Phila.

The Lawrence Engine is the best. See ad. page 286. dress E. & F. Gleasen. 52 Canal St., Philadelphia, Pa.

Manufacturers can save 25 per cent of customary outlays by use of H. W. Johns' Asbestos Liquid Paints, which are of a higher grade than any other paints in use.

Nickel Plating .- A white deposit guaranteed by using ourmaterial. Condit, Hanson & Van Winkle, Newark, N.J. English Agency, 18 Caroline St., Birmingham.

Boilers ready for shipment, new and 2d hand. For a good boiler, send to Hilles & Jones, Wilmington, Del.

Punching Presses, Drop Hainmers, and Dies for working Metals, etc. The Stiles & Parker Press Co., Middle-

Hydra ulic Presses and Jacks, new and second hand Lathes and Machinery for Polishing and Buffing Metals. E. Lyon & Co., 470 Grand St., N. Y.

The Cameron Steam Pump mounted in Phesphor

Bronze is an indestructible machine. See advertisement. We make steel castings from ½ to 10,000 lbs weight, (6) H. I. writes: A. says the whole work-3 times as strong as cast iron. 12.000 Crank Shafts of this ing power of steam can only be obtained by an unintersteel now running and proved superior to wrought iron. Circulars and price list free. Address Chester Steel Castings Co., Evelina St., Philadelphia, Pa.

Diamond Drills, J. Dickinson, 64 Nassau St., N. Y.

ings are the most durable, effective, and economical of any in use. H. W. Johns Manufacturing Company, 87 Maiden Lane. New York, are the sole manufacturers. Do not be deceived by worthless imitations.

Oak Tanned Leather Belting, Rubber Belting, Cotton Belting, Round Leather Belting. Greene, Tweed & Co., 18 Park Place, New York.

Machine Cut Brass Gear Wheels for Models, etc. (new list). Models, experimental work, and machine work generally. D.Gilbert & Son, 212 Chester St., Phila., Pa.

Elevators, Freight and Passenger, Shafting, Pulleys, and Hangers. L. S. Graves & Son, Rochester, N. Y.

Wheels and Pinions, heavy and light, remarkably strong and durable. Especially suited for sugar mills and similar work. Pittsburgh Steel Casting Company, Pittsburgh, Pa.

Self-feeding upright Drilling Machine of superior construction. Drills holes from % to % in. diameter. Pratt & Whitney Co., Manufs., Hartford, Conn.

Cities and Villages. See advertisement in Scientific we think, would be best. American of this week.

Hand Fire Engines, Lift and Force Pumps for fire and all other purposes. Address Rumsey & Co., Seneca Falls, N. Y., U.S.A.

The Turbine Wheel made by Risdon & Co., Mt. Holly, N.J., gave the best results at Centennial test.

For Shafts, Pulleys, or Hangers, call and see stock kept at 79 Liberty St. Wm. Sellers & Co.

Wm. Sellers & Co., Phila., have introduced a new Injector, worked by a single motion of a lever.

Address Star Tool Co., Providence, R. I., for Screw Cutting Engine Lathes of 13, 15, 18, and 21 in. swing.

Latest and best Books on Steam Engineering. Send stamp for catalogue. F. Keppy, Bridgeport, Conn.

Solid Emery Vulcanite Wheels-The Solid Original Emery Wheel - other kinds imitations and inferior. Caution.-Our name is stamped in full on all our best Standard Belting, Packing, and Hose. Buy that only. The best is the cheapest. New York Belting and Pack ing Company, 37 and 38 Park Row, N. Y.

For Solid Wrought Iron Beams, etc., see advertisement. Address Union Iron Mills, Pittsburgh, Pa., for Lthograph, etc.

The Scientific American Export Edition is pubother appropriate contents, business announcements, etc. It forms a large and splendid periodical of nearly one hundred quarto pages, each number illustrated with about one hundred engravings. It is a complete record of American progress in the arts.

Best Wood Cutting Machinery, of the latest improved kinds, eminently superior, manufactured by Bentel, Margedant & Co., Hamilton, Ohio, at lowest prices.

Presses, Dies, and Tools for working Sheet Metals, etc. Fruit and other Can Tools. Bliss & Williams, Brooklyn, N. Y., and Paris Exposition, 1878.

(1) G. S. Y. writes: Is the manufacture of sugar from the beet root a success? Are there any factories for its manufacture in this country, and if so, where located? A. Consult the Scientific American SUPPLEMENT, pp. 1947, 1963, 1324, 1032, and Scientific AMERICAN, p. 169, vol. 37.

(2) A. F. B. asks: 1. Was there a good and sufficient reason for basing our system of numeration upon 10 rather than 12 parts? If so, what? A. The decimal system is not the best; but it is historical, founded on the circumstance that we have ten fingers and not twelve, or any other number. 2. What sufficient reason is there for spelling contrary to pronunciation? A. No reason but custom. S. Are any or all of the other branches equally faulty? A. All human devices fall short of ideal perfection.

(3) J. M. McC. asks; 1. What are the capabilities of a rather strong medical magneto-electric machine? Can I magnetize with it iron and steel and make magnets strong enough for a telephone; or strong enough to serve as magnets in a larger magneto-electric machine? Can I electroplate with it? A. Your machine is not suited to any of the purposes named. 2. By what rule can I calculate the size or length of wire required in the bobbins for a magnet of given size? A. The amount of wire varies with the use to which the magnet is applied. 3. What battery would be best for a good medical galvano-faradic machine—how many pairs? A. An ordinary sulphate of copper battery, or two small cells of Marié Davy sulphate of mercury. 4. What size of induction coil? A. See p. 203 (14), current volume of Scientific American.

(4) S. B. T. asks (1) for a recipe for making glue to fasten leather to iron, in order to cover iron pul-For the most substantial Wood-Working Tools, adleys. A. 1 part of crushed nutgalls is digested 6 hours der is used for this purpose. with 8 parts distilled water, and strained. Glue is mac- firm where I can get iron such as used for tinning? A Sheet Metal Presses, Ferracute Co., Bridgeton, N. J. erated in its own weight of water for 24 hours and then dissolved. The warm infusion of galls is spread upon From any large dealer in sheet iron. the leather, the glue solution upon the roughened surface of the warm metal; the moist leather is pressed upon it and theu dried. 2. Also a good dressing to maks rubber belts adhere to pulleys. A. We think you should use wider belts or larger pulleys if the adhesion is insufficient. It is a good plan to occasionally wash theworn surface of rubber belts with soap and water. 3. Also a glue for sticking leather to leather at splices. A. See recipes on p. 187 (5), in current volume.

> (5) I. H. A. writes: I have been making a mercurial barometer. Can you tell me how to proceed to set the scale? A. Zero of your scale is at the level of the mercury in the cistern. The scale simply indicates the height in inches of the column of mercury contained by the tube.

> (6) H. I. writes: A. says the whole workrupted flow of steam from the boiler into the cylinder.

The genuine Asbestos Steam Pipe and Boiler Cover- Who is right? A. We think it might be possible, theoretically, to obtain the whole power with either system.

> (7) T. B. O. asks for a recipe for a walnut stain. A. Water, 1 quart; sal soda, 11/2 oz.; Vandyke brown, 21/2 ozs.; potassium bichromate, 1/4 to 1/2 oz.; boil for ten minutes, replacing the water lost by evaporation. Use hot, and allow the work to dry thoroughly before oiling or varmishing.

(8) M. T. writes: 1. In the Scientific American of August 24 you give the plan of a simple phonograph, but you do not tell what proportions to make it by. How large should the mouthpiece be? A. 214 inches external diameter. The small aperture 1/2 inch diameter. 2. What size should the diaphragm be? A. 214 inches, leaving a portion, 1x inches diameter, free to vibrate. 3.What would make a good spring? A.Wood, steel or brass. 4. Will the machine work perfectly when properly made? A. Yes, with careful manage-Holly System of Water Supply and Fire Protection for made of? A. Wood of almost any kind. Mahogany,

> (9) E. E. writes: I want to make a Prussian blue that will dissolve in water. I have made a blue, but it is insoluble. A. Mix 1 lb. of the dry blue with a little hot water to form a paste, and triturate this with about 11/2 oz. of potassium ferrocyanide (yellow prussiate).

> (10) J. L. S. asks: What is the best polish for cleaning the end of the cylinder, and caps that fit over the end of the cut-off? A. One of the best is tripoli, applied with a piece of flannel and a drop of oil. If the metal is very dirty, use first fine emery or emery flour and oil. In some cases it is preferable to use first a little emery moistened with solution of oxalic acid in 5 or 6 parts of warm water.

(11) F. H. D. asks: Did you ever know the water to leave the gauge glass entirely after the fires had been banked under the boiler and the steam pressure gone down of its own accord? What is the cause of its doing so? It is a case that has come under my own personal observation, all the valves being shut at the time; when on opening the gauge cock and air being admitted the water will return gradually, until the water resumes its proper level in the boiler. A. It is not uncommon lished monthly, about the 15th of each month. Every for water to fall in the gauge when steam goes down, number comprises most of the plates of the four precedand the boiler becomes comparatively cool; but in the ing weekly numbers of the Scientific American, with and the boiler becomes comparatively cool; but in the mission of air, we are inclined to think that the connec tions between the gauge and the boiler must be partly closed, and that there must be a small leak in the gauge through which air could enter as a vacuum formed in the boiler. Air entering the boiler through the gauge in this way would carry the water with it.

> (12) H. D. H. asks: What is the intrinsic value of gold per ounce, both 14 carat and 18 carat fine? A. Coin value of fine metal 20.67 per troy ounce; 14 carat 7 and 18 carat a of this value.

> (13) G. W. B. asks if forest leaves will answer for filling between the two walls of an icehouse built above ground. A. If the leaves are thoroughly dried, broken, and not too closely packed, they will answer the purpose very well. Sawdust, however, is con- ${\bf sidered\ preferable.}$

> (14) E. P. writes: I am making a medicine (of which I am not the inventor; however it is a secret). Can I sellit, or must I have a license? A. If the medicine is not patented, we think you may sell it.

> 1. Scientific American, vol. 39, p. 171 (2), contains a recipe for a silver solution. I made it so, but took too much potassium cyanide to settle the silver nitrate, which produced a white foam. What is that foam, and what does the liquid contain? Can it be usedyet, and how? A. If the water used was free from chlorides, the white body is silver cyanide. Dilute the mixture somewhat with warm water and let it stand, when the precipitate will settle. If too much potassium cyanide has been added, the supernatant liquid will give a fresh precipitate on addition of more silver nitrate. To prepare silver cyanide the proportion should be 85 parts of silver nitrate to 33 parts of dry potassium cyanide. 2. How much potassium cyanidefor 1 gallon solution would you recommend? I have a few recipes which differ from 11/2 to 8 ozs. A. The precipitate requires for its proper solution at least 33 additional parts of potassium cyamide dissolved in water. Electroplaters' baths usually contain much free potassium cyanide-water, 1 gallon; potassium cyanide, 9 to 12 ozs; silver cyanide, 1 oz. 3. How can I make a silver colution for a bright deposit? We know of nothing that will obviate the necessity of burnishing; polishing is not always necessary. It is said that a little sulphuret of carbon added to the plating solution prevents the chalky appearance and gives the deposit the appearance of metallic silver. 4. Does gold plating need any polishing? A. Yes.

> (15) F. H. wishes to know what material is used to prevent rubber in vulcanizing from sticking to iron, brass or steel moulds. A. Soapstone (steatite) pow-

(16) H. L. A. asks: What is the percentage of rosin oil in rosin? What is the residue, after the oil is distilled, used for? In what sort of stills is rosin distilled for oil making? A. When rosin is distilled it yields about 74 per cent of liquid distillation. The first portions, called essence of rosin, are yellow and strong smelling. Later in the distillation "pinolin," or rosin oil proper, passes over. The latter is used in paints, for the manufacture of printer's ink, in soap making and in cheap lubricators. The pitchy residue may be used for roofing and similar purposes. The stills may be constructed of iron.

(17) J. S. B. writes: In the September 7 number of the Scientific American you speak of "Mosso's plethysphygmograph." Please state what it is. A. It is the name given by Mr. Mosso to an instrument of his invention designed for observing the variations in the circulation of the blood in the arms, etc.

(18) W. H. B. asks for an electro silver puffs are sufficiently rapid (say ten puffs per second). removing grease, etc., from brass before plating. A. page.

See p. 171 (2), current volume, Scientific To clean the brass dip it first in a strong boiling hot solution of caustic soda to remove grease, and (without touching) rinse with clean water, dip for a few moments in nitric acid diluted with two parts of water, rinse again and scour with fine clean sand and a stiff brush; then dip momentarily in the acid bath, rinse quickly, and transfer immediately to the plating bath.

(19) A. T. R. writes: At our temperance meeting recently there was a spirited discussion in reference to the composition of soda water, one man claiming that he could drink enough to produce intoxication; another claimed that its ingredients were wholly mineral, and therefore not intoxicating. A Common soda water is water supercharged with carbonic acid. It is not intoxicating. Some of the sirups used with it not unfrequently contain alcohol.

(20) A. T. J. asks: 1. What is the process ment. 5. What should the body of the instrument be for making artificial ice? A. There are several promade of? A. Wood of almost any kind. Mahogany, cesses. See pp. 159 and 337, vol. 38, and 95, 168, and 335, vol. 37, Scientific American. Also pp 425, 507, 1159, 1430, and 1348, Scientific American Supplement. 2. Will you please inform me of the name of some book which treats of the subject "Water," and that subject only. A. "Forms of Water "-Tyndall.

> (21) C. K. asks how to fasten rubber on brass. A. Melt together in an iron vessel equal parts of pitch and gutta percha. Use moderately hot.

(22) E. W. E. asks: Is there any recipe to make cloth waterproof, and one to make it mildew proof? A. Pass the cloth slowly through a strong, boiling aqueous solution of yellow soap, and then digest for an hour or more in a strong bath of alum or lead acetate (sugar of lead) dissolved in water.

(23) F. G. H. asks: How can I make a good nickel plating liquid, and use it? A. Dissolve ¾ lb. of nickel ammonium sulphate, or 4 ozs. of the correspond, ing chloride, in a gallon of soft water. See article on nickel plating on p. 209, vol. 38, Scientific American.

Where can silk and cotton covered wire be bought; A. Of any dealer in telegraph and electrical supplies See our advertising columns.

I saw somewhere that the saltness of the oceanand Great Salt Lake was owing to the water escaping only by evaporation. Is this true? A. The saltness is du to a greater loss of water by evaporation than other wise.

(24) M. C. B. asks for a recipe for remove ng superfluous hair. A. See p. 107 (8), vol. 38.

Can you inform me how to give canvas a soft, black raterproof coating that will not harden and crack of! A. Soften 2 parts of gutta percha with 3 or 4 parts of benzole by aid of heat over a water bath. Boil vegotable oil to the consistence of jelly, cool, and add 75 per cent of benzole. To seven gallons of this add three gallons of the gutta percha solution, and an additional gallon of benzole containing a sufficient quantity of lampblack, graphite, and boneblack to color.

(25) L. V. S. asks: Is there any substance known which will render copper more easily melted? It so, what is it? A. As we understand you, no.

(26) M. L. A. writes: 1. Two men pulling upon the ends of a rope in opposite directions, each one pulls 25 lbs. What is the strain on the rope? A 25 lbs. 2. If one end is fast, and 25 lbs. weight applied on the other, what strain does the rope sustain? A. 21. lbs. + its weight.

(27) N. B.—See pp. 1326, SUPPLEMENT No. 83, and 48, current volume, Scientific American.

(28) A. I. asks for a good work which treats fully on the practical manufacture of Portland and other cements. A. Consult Reid's "Practicul Treatise on Cements."

(29) I. E. P. asks: 1. Does any white lead used for painting or commercial purposes contain 98 per cent pure lead? A. No. Commercial white lead is a compound of lead carbonate and hydrate in variable proportions. In general the composition may be represented by the formula 2PbCO₃+PbH₂O₂. 2. I get from a very fine article, after treating it with dilute nitric acid, a precipitate which does not entirely dissolve in muriatic acid, which would seem o show something besides baryta. What is it? A. It is frequently adulter. ated with barium sulphate (heavy spar), barium carbon ate (witherite), calcium carbonate and zinc oxide, and sometimes with pipe clay or kaolin. Of these the first and last named substances remain as a residue after treatment with nitric and hydrochloric acids. The residue may also contain lead sulphate. 3. What is the best and most decisive test for white lead, and how can I ascertain the percentage of adulteration? A. See p. 269. Thorpe's "Quantitative Chemical Analysis."

(30) M. J. S. asks: 1. How can I separate small particles of emery gathered by means of an exhaust pan? We use wooden wheels covered with leather, upon which we glue No. 60 emery. The emery Can you give me the address of some manufacturing is still sharp, but cannot be used on account of the iron mixed with it. A. Use a magnet. 2. How can I cement leather to the periphery of an iron wheel, so that it will withstand continual jar, to be used as a buff vheel subjected to rough usage? A. Melt together in an iron vessel equal parts of pitch and gutta percha; oughen the iron and use the cement.

What is the best method for using exhaust steam to create a strong draught for two boilers 30 inches diameter and 30 feet long? A. Direct a thin flat jet of steam up the smoke stack.

(31) E.A. D.P. asks: Will well glazed earthen jars do for a battery for a short telegraph line, say 1/2 mile, as well as glass? A. Yes.

(32) C. L. writes: 1. In your issue of 28th ult., you describe a simple electric light. Should the carbon holders be made of brass? A. Yes. 2. Could the upright be made of varnished wood? A Yes 3 What is a Bunsen cell? A. See reply (24), p. 139, current volume of Scientific American. 4. Would the light produced by this apparatus be sufficient to light a room 20 x 20? Would several common copper and zinc B. says the same amount of power can be obtained if (18) W. H. B. asks for an electro silver room 20 x 20? Would several common copper and zinc the steam comes from the boiler in puffs, provided these plating solution; also what is the best mixture for batteries suffice? A. See reply to H. E. M., on next

(33) C. S. writes: In the side of our cistern where the water remains after passing through the filter a large number of the germs of mosonitoes have made their appearance. In fact the water is thick with them. Is there any remedy? A, Burn a fragment of sulphur in the cistern, and keep the cover on tight; the mosquitoes, finding no outlet, will soon die, and no more will

(34) D. W. C. asks: What is the source of the driftwood appearing off the north coast of Ireland every year? The fact is mentioned by Simms in proof of his North Pole theory. A. The wood is probably carried northward by the Gulf Stream.

solution capable of being applied to tin plate? If so, Suspend the work to be plated, first thoroughly cleaned, facing a plate of copper of equal surface in a cold satorated aqueous solution of copper diluted with 1/4 volume of water Then, by means of stout copper wire, connect the work with the negative or zinc pole, and the copper anode with the positive pole of a Smee (1 gallon zinc carbon) battery in zinc surface exposed, somewhat exceeding the surface of the work exposed in the plating bath.

(36) R. F.—Genuine gutta percha is rendered sufficiently soft by boiling water or steam to mould by pressure. It cannot be rendered liquid by heat without partial decomposition. It dissolves readily in carbon disulphide and in warm naphtha or ben-

(37) J. C asks for the formula of a baking powder, I have four of the ingredients and lack only the fifth, which you can supply Cream of tartar 4 lbs. bicarbonate of soda 2 lbs., powdered alum 1 lb., corn starch, 3 lbs There is etill another ingredient. Please let me know what it is, and the proportion. A. See p. 299 (32), vol. 37. Alum is not a proper constituent for baking powder.

(38) L W. A. M. asks whether grinding iron on an emery wheel is injurious to health. A. Yos. very, unless the dust is carried away by an exhaust fan,

(39) H. E. M.—The simple electric light apparatus described on p. 200 of current volume is designed merely as an experiment. It is not calculated for continued use. It will take 15 or 20 cells of zinc and copper battery.

(40) M. J C. writes: In observing the planets, and Jupiter in particular, through a first class telescope, can the shadow of the planet be seen projected in space ina direction opposite to the sun? A. No,

Has any method everbeen discovered by which lenses can be ground accurately in the form of a segment of an ellipsoid, and would not a lens of this form be free from chromatic and spherical aberration? A. Lenses and specula have been ground in parabolic form by hand and by machine. Telescopic specula of this form are free from the imperfections found in spherical mirrors.

(41) W M. E. writes. 1. Mechanics here say that a patch of new iron put on the inside of the firehox of a boiler over the old iron, without cutting out the old, will make the old burn out faster than it would without the new patch. I can see that the patch would last longer to have water come next to it, but I claim that the old will not burn out until the new is gone. Is this sound? A. The thicker you make the metal with which the flame comes in contact, the less rapidly will the heat be conducted through it, and hence the more rapidly will it burn out. 2. Are % inch stay bolts once in 6 inches each way, for 18 horse power boiler, in firebox, enough to be safe? Boiler iron 16. A. It depends on the pressure of steam. 3. Give the best and cheapest outside coating for boiler to keep heat in. A. Wisps of straw with a little clay make a very effective coating. Cow hair felt is also very good.

(42) C. M. S asks: Will you give me a recipe for a waterproof cement, one that will harden immediately after the application? A. See p. 187, current volume, Scientific American, and answer to G. P. P.,

(43) C. A. T asks (1) if potatoes have any salt in them A. Salt (sodium chloride) is usually found in small quantities in the ash of potatoes, 2. Is salt a mineral? Can minerals exist in vegetables? A. Yes, You should consult some work on agricultural chemis-

(44) G. P. P asks: What is the strongest and best cement made, and is there any cement made that will unite rocks or pebbles tightly together? Is there any glue that water will not affect? A. For general purposes those given in answer to T. B. A., J. L. and others, p. 187, current volume, Scientific Ameri-Of these Nos. 2, 3, 4, and 5 are quite waterproof.

(45) S. W M.—As far as we can judge from the small sample, the liquor is simply raw whisky containing a notable amount of fusel oil (amylic alcohol).

(46) J. S. A writes: Can you give me the method used in preparing "buttons" of lampblack for use in the Edison carbon telephone? A. The carbon is compressed in suitable moulds under great pressure.

MINERALS, ETC.—Specimens have been received from the following correspondents, and examined, with the results stated:

L P. S.-Principally iron sulphides-contains a little

COMMUNICATIONS RECEIVED.

The Editor of the Scientific Americanack nowledges with much pleasure the receipt of original papers and contributions on the following subjects:

The Gas Engine. By A. A. T How to Test a Lathe. By C. A. S. Forming a Right Angle. By A M. W. Mine Explosions, By C. W. J. Telephone. By A. T.
Railroad Signals. By S. F. Telephone Experiments, By J. H. R. Steam Joint. By J. H. B. Constructing a Right Angle. By W. L. T. [OFFICIAL.]

INDEX OF INVENTIONS

Scientific American.

FOR WHICH

Letters Patent of the United States were Granted in the Week Ending

September 3, 1878 AND EACH BEARING THAT DATE.

[Those marked (r) are reissued patents.]

A complete copy of any patent in the annexed list, (35) F. T. asks: Is there a known coppering including both the specifications and drawings, will be furnished from this office for one dollar. In ordering please let me know the ingredients and application. A. please state the number and date of the patent desired,

HOW TO MAKE A WORKING TELE-PHONE A valuable and excellent paper. By GEO. M.
HOPKINS. Containing full Practical Directions, with
Six Working Drawings to seale, enabling any intelligent
person to make Working Telephones at small expenses
with clear instructions how to set up a Telegraph Line
and establish communication by means of Telephones,
Supplement 142. Price 10 cents To be had at this
office and of all newsdealers.

HOW TO MAKE A PHONOGRAPH. Full Instructions, with Eight Working Drawings. Half Size. Construction easy and inexpensive. These drawings are from an actual working Phonograph: they show the sizes, forms, and arrangement of all the parts. The explanations are so plain and practical ast to enable any intelligent person to construct and put a Phonograph in successful operation in a very short time. Contained in SCIENTIFIC AMERICAN SUPPLEMENT NO.133. Price 10 cents. To be had at this office and of all newsdealers

CAVEATS, COPYRIGHTS, TRADE MARKS, ETC.

Messrs. Munn & Co., in connection with the publication of the Scientific American, continue to examine Improvements, and to act as Solicitors of Patents for

In this line of business they have had OVER THIRTY YEARS' EXPERIENCE, and now have unequaled facilities for the preparation of Patent Drawings, Specifications, and the Prosecution of Applications for Patents in the United States, Canada, and Foreign Countries. Messrs. Mnnn & Co. also attend to the preparation of Caveats, Trade Mark Regulations, Copyrights for Books, Labels, Reissues, Assignments, and Reports on Infringements of Patents. All business intrusted to them is done with special care and promptness, on very moderate

We send free of charge, on application, a pamphlet containing further information about Patents and how to procure them; directions concerning Trade Marks, Copyrights, Designs, Patents, Appeals, Reissues, Infringements, Assignments, Rejected Cases, Hints on the Sale of Patents. etc.

Foreign Patents .- We also send, free of charge, a Synopsis of Foreign l'atent Laws, showing the cost and method of securing patents in all the principal countries of the world. American inventors should bear in mind that, as a general rule, any invention that is valuable to the patentee in this country is worth equally as 529 much in England and some other foreign countries. Five patents-embracing Canadian. English, German, French, and Belgian-will secure to an inventor the exclusive monopoly to his discovery among about one HUNDRED AND FIFTY MILLIONS of the most intelligent people in the world. The facilities of business and steam communication are such that patents can be obtained abroad by our citizens almost as easily as at home. The expense to apply for an English patent is \$75; German, \$100; French. \$100; Belgian, \$100; Canadian, \$50.

Copies of Patents.-Persons desiring any patent 836 to November 26, 1867, can be supplied ,542 with official copies at reasonable cost, the price depending upon the extent of drawings and length of

Any patent issued since November 27, 1867, at which time the Patent Office commenced printing the drawings and specifications, may be had by remitting to this office \$1

A copy of the claims of any patent issued since 1836 will be furnished for \$1.

When ordering copies. please to remit for the same as above, and state name of patentee, title of invention, and date of patent.

A pamphlet, containing full directions for obtaining United States patents sent free. A handsomely bound Reference Book, gilt edges, contain 140 pages and many engravings and tables important to every patentce and mechanic, and is a useful hand book of refer-520 ence for everybody. Price 25 cents, mailed free.
