

Business and Personal.

The Charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

Church Pipe Organs, new and second-hand, ready for delivery. Send for particulars. Henry Erben & Co., Organ Builders, East 2d St. near 2d Ave., New York.

Portable and Stationary Engines; Boilers of all kinds; 45 Cortlandt St., N. Y. Erie City Iron Works, Erie, Pa. For best Cylinder Oil, R. J. Chard, New York.

Alcott's Turbine received the Centennial Medal. Assays of Ores, Analyses of Minerals, Waters, Commercial Articles, etc. Technical formulae and processes. Laboratory, 38 Park Row, N. Y. Fuller & Stillman.

Kreider, Campbell & Co., 1060 Germantown Ave., Phila., Pa., contractors for mills for all kinds of grinding.

The only Engine in the market attached to boiler having cold bearings. F. F. & A. B. Landis, Lancaster, Pa.

The Chemical Laboratory of Rutgers College will be open from July 5 to September 5, for special courses in analytical chemistry, mineralogy, and experimental chemical investigation. For terms, etc., address Prof. P. T. Anstett, Ph.D., F.C.S., Lock Box 2, New Brunswick, N. J.

For first rate Hand, Foot, or Steam Band Saws, price \$25.00, address G. W. Baker, Wilmington, Del.

Boat Forging Machine & Power Hammers a specialty. Send for circulars. Forsyth & Co., Manchester, N. H.

Pulverizing Mills for all hard substance and grinding purposes. Walker Bros. & Co., 23d and Wood St., Phila.

Best Steam Pipe & Boiler Covering. P. Carey, Dayton, O.

Sperm Oil, Pure. Wm. F. Nye, New Bedford, Mass.

Power & Foot Presses, Ferracute Co., Bridgeton, N. J.

Diamond Engineer, J. Dickinson, 64 Nassau St., N. Y.

Foot Lathes, Fret Saws, &c., 90pp. E. Brown, Lowell, Ms.

Boilers & Engines cheap. Lovegrove & Co., Phila., Pa.

Punching Presses, Drop Hammers, and Dies for working Metals, etc. The Stiles & Parker Press Co., Middle town, Conn.

"The Best Mill in the World," for White Lead, Dry, Paste, or Mixed Paint, Printing Ink, Chocolate, Paris White, Shoe Blacking, etc., Flour, Meal, Feed, Drugs, Cork, etc. Charles Ross, Jr., Williamsburgh, N. Y.

North's Lathe Dog. 347 N. 4th St., Philadelphia, Pa.

Safety Linen Hose and Rubber Hose, all sizes, at reduced rates. Greene, Tweed & Co., 18 Park Place, N. Y.

Dead Pulleys, that stop the running of Loose Pulleys and Belts, taking the strain from Line Shaft when Machinery not in use. Taper Sleeve Pulley Works, Erie, Pa.

Improved Wood-working Machinery made by Walker Bros., 73 and 75 Laurel St., Philadelphia, Pa.

For Solid Wrought Iron Beams, etc., see advertisement. Address Union Iron Mills, Pittsburgh, Pa., for lithograph, etc.

For Heavy Punches, Shears, Boiler Shop Rolls, Radial Drills, etc., send to Hillis & Jones, Wilmington, Del.

2d hand Planers, 7' x 30', \$300; 6' x 24', \$225; 5' x 24', \$200, ac. cut. b'k'g'd Lathes, 9' x 29', \$300; A. C. Stebbins, Worcester, Mass.

Best Turbine Water Wheel, Alcott's, Mt. Holly, N. J.

Patent Wood-working Machinery, Band Saws, Scroll Saws, Fixtures, etc. Cordesman, Egan & Co., Cincinnati, O.

Band Saws, \$100; Scroll Saws, \$75; Planers, \$150; Universal Wood Workers and Hand Planers, \$150, and upwards. Bentel, Margedant & Co, Hamilton, Ohio.

The only genuine Geiser Self-regulating Grain Separator. Address the Geiser Manuf. Co., Wayneboro' Franklin Co., Pa.

Diamond Self Clamp Paper Cutter; Howard's Parallel Vice. Howard Iron Works, Buffalo, N. Y.

Empire Gum Core Packing, Soap Stone Packing, in quantities to suit. Greene, Tweed & Co., 18 Park Place, N. Y.

The key to \$30,000 for \$250. T. J. Duncan, Towash, Texas.

J. C. Hoadley, Consulting Engineer and Mechanical and Scientific Expert, Lawrence, Mass.

Valuable Invention to users of Steam Boilers. See advt., page 318, May 18, 78. Address U. S. Automatic Stoker Co., No. 2 Chestnut St., Philadelphia, Pa.

Solid Emery Vulcanite Wheels--The Solid Original Emery Wheel--other kinds imitations and inferior. Caution--Our name is stamped in full on all our best Standard Belting, Packing, and Hose. Buy that only. The best is the cheapest. New York Belting and Packing Company, 37 and 38 Park Row, N. Y.

Hydraulic Presses and Jacks, new and second hand. Lathes and Machinery for Polishing and Boring metals. E. Lyon & Co., 470 Grand St., N. Y.

For Town and Village use, comb'd Hand Fire Engine & Hose Carriage, \$330. Forsyth & Co., Manchester, N. H.

Nickel Plating--A white deposit guaranteed by using our material. Condit, Hanson & Van Winkle, Newark, N. J.

Cheap but Good. The "Roberts Engine," see cut in this paper, June 1st, 1878. Also horizontal and vertical engines and boilers. E. E. Roberts, 107 Liberty St., N. Y.

The Cameron Steam Pump mounted in Phosphor Bronze is an indestructible machine. See ad. back page.

Bound Volumes of the Scientific American.--I have on hand bound volumes of the Scientific American, which I will sell (singly or together) at \$1 each, to be sent by express. See advertisement on page 45. John Edwards, P. O. Box 106, N. Y.

1,000 2d hand machines for sale. Send stamp for descriptive price list. Forsyth & Co., Manchester, N. H.

Improved Steel Castings; stiff and durable; as soft and easily worked as wrought iron; tensile strength not less than 65,000 lbs. to sq. in. Circulars free. Pittsburgh Steel Casting Company, Pittsburgh, Pa.

Presses, Dies, and Tools for working Sheet Metals, etc. Fruit and other Can Tools. Bliss & Williams, Brooklyn, N. Y., and Paris Exposition, 1878.

For Power & Economy, Alcott's Turbine, Mt. Holly, N. J.

Notes & Queries

(1) M. M. B. asks: What is meant by 500 diameters when applied to the power of a microscope? Does it mean that an object is magnified five hundred times, or that it appears five hundred times larger than with the unaided eye? A. Linear magnification is meant when so many diameters are spoken of. Superficial magnification equals the square of the linear magnification; for instance, the former will be 250,000 when the latter is 500.

(2) T. W. F. writes: I wish a recipe for the destruction of lice eggs on hogs, without injury to the skin; or some solution that will drive them away. A. Rub along the spine and inside the thighs a mixture composed of 4 ozs. of lard, one tablespoonful of sulphur, and one tablespoonful of kerosene oil.

(3) A. S. B.--The insect is what is commonly called the carpet beetle. Le Conte, who received the first specimens from Oregon, referred it to *Antronus leptidus*. Dr. Lintner points out that they conform in many respects to *A. scrophulariae*, and examples reared by Mr. Fuller from larvae taken in New York city were clearly identical with the last named. It is a difficult pest to dislodge; cotton molted with benzine, or preferably kerosene, and forced into the cracks of the floor, under the surbass, etc., according to Lintner have thus far proved the most effectual means of destroying them and preventing new innovations. The ordinary applications of camphors, pepper, tobacco, turpentine, etc., are powerless against it.

(4) P. H. L. asks for a recipe for a cement for mending rubber goods. A. Caoutchouc, 1 part; benzole, 5 parts; digest with occasional stirring until solution of the gum is effected. Or fuse together equal parts of pitch and gutta percha, and to this add about 2 parts of linseed oil containing 5 per cent of litharge; continue the heat until the ingredients are uniformly commingled. This is applied warm to the fabric.

(5) J. S. O. asks: How can I mix a paste or what ingredients are best to use to fasten wall paper and borders so that when we glue-size and varnish on them the edges will not curl up and draw off? We have tried flour and starch paste, and also used glue in small quantities, but have had the same trouble in each case. A. In place of water alone try a strong solution of shellac 4 parts, and borax 1 part, in boiling water; cool and add wheat or, better, starch flour to proper consistency.

(6) H. H. asks how to tin strap iron, that is, put a tin coating on so it will not rust. A. Clean the iron by submitting it to a bath of 1 part oil of vitriol and 30 parts water, and scouring with sand if necessary; dry it in warm sawdust, and then pass it through a bath of molten tin covered with tallow or rosin oil.

(7) A. O. D. asks: 1. How can I temper steel the hardest, such as scrapers and small pieces of steel? A. You will find full instructions in Joshua Rose's papers on "Practical Mechanism," that have been published in the Scientific American. 2. What role is used to calculate the horse power of a compound engine? A. Multiply the mean effective pressure in pounds per square inch in each cylinder (to be ascertained by the application of the indicator) by the area of each piston in square inches, respectively; multiply each of the above products by the piston speed in feet per minute in the cylinder to which it refers, add the two products, and divide by 33,000.

(8) W. C. E. asks: Can water be raised 24 feet high with a steam siphon with as much economy as with a steam pump? A. We think there is but little difference, in general.

(9) J. T. asks: What is cat silver used for? Is it used for anything in this country? Webster says it is a "mineral, a variety of mica." If it is good mica, what is it worth? Would a mine of it pay to work? Is it not used in the above business? A. The name was once applied to the small scales of mica (the glimmer of the Germans) forming the sand derived from a yellowish mica schist. It has been used in paints or varnishes, sealing-wax, bronze powders, and with sizing in decorative art. Large pieces of clear mica (Muscovite)--from 2 to 15 inches--are of commercial value. See article on the "Utilization of Mica," p. 241, vol. 34, Scientific American.

What is a good article of stillingia worth in New York city? A. The extract is sold at \$1 per lb.

(10) A. P. writes: I am running a stationary engine 14 x 36, with two 24-in. boilers 24 feet long, 42 inches diameter, 12 inch flues, which have been in actual use 28 years, and for the last four years been under pressure night and day, and never had but one patch on them in all this time. I tested them at 100 lbs. 4 weeks ago, and they stood it well. Can this number of years be beat? Please answer and let me know. I carry an average pressure of 60 lbs. to the square inch. A. This is an excellent record, speaking well both for the boiler maker and the engineer. We would be glad to hear from any one who can make as good a showing.

(11) W. W. writes: I am running a mill which stands 140 yards from a creek. The bottom of creek is 33 feet below mill; the well at mill is 37 feet deep; by raising dam 4 or 5 feet, which will give me 8 feet fall in the well, can I run a siphon? A. Yes, but to no particular advantage, as we understand the situation. However, if you will send a sketch, with dimensions, showing proposed arrangement, we shall be better able to judge.

(12) A. B. P. asks: How can I make potassium sulphocyanide? A. Potassium ferrocyanide (yellow prussiate), deprived of its water of crystallization by heat, is mixed with half its weight of sulphur and the whole heated to tranquil fusion for some time in an iron pot. When cooled the mass is boiled with water, decanted from the residue, mixed with enough potassium carbonate to precipitate all of the iron, filtered, and concentrated over a fire to a small volume, from

which crystals of potassium sulphocyanide separate on cooling.

What are the proportions used in making "oil of apples" from fusel oil? I tried it by guess, but the product smelled like walnut hulls? A. Make a cold mixture of 1 part each of amylic alcohol (fusel oil) and 1 1/2 part of dry valerianate of soda; heat the mixture gently for some time on the water bath, and then mix it with a quantity of water, when the oil-like amyli valerianate will separate. This dissolved spirits of wine constitutes commercial apple oil.

Is methylated alcohol manufactured in this country for chemical uses? Is it cheaper than ordinary alcohol? A. Yes. It is somewhat less expensive.

(13) E. A. B. asks: Will a water wheel 3 feet under the water, in a wooden flume, make a good ground connection for a short telegraph and telephone line, say 1,000 feet? A. Yes.

(14) J. B. asks: 1. Is electric light used on metallic or ground circuit? A. Metallic. 2. How many lights can be made on one circuit, or will it take a separate conductor for each light? A. A separate conductor is required for each.

(15) C. J. M. asks: 1. How much insulated wire, No. 30, does it take for a telephone (for each magnet), the magnet being a permanent one, 5 inches long and 3/8 inch in diameter? A. No. 30 wire is not fine enough. Use 1 oz. of No. 38 or No. 40 for each magnet. 2. And for what distance would such a one answer? A. 100 miles. 3. Also, will rust on an iron wire interfere with its use? A. No. 4. I was once told that the wires should not be any closer than 2 inches from the house or any other object. How is this? A. The line wire should be supported on insulators.

(16) R. C. C. asks: 1. How far from an electro-magnet can I attract or draw the metal to be attracted? A. If at 1/4 inch distant the armature is attracted with a force measured by 100 grains, at 1 inch it would equal but 1 grain, etc. 2. Does it require the metal to be attracted to be in weight equal to the strength or force of the magnet? A. No. 3. For strength or attraction which is preferable, a horseshoe or a magnet made from gas pipe, as illustrated in your previous issue? A. The horseshoe form is one of the best.

(17) G. E. S. writes: I made a phonograph, to the best of my belief according to your description in the Scientific American of March 30, 1878. It will not reproduce my voice. Following is the description of the one I made: A brass cylinder 8 inches long, 1 1/2 in circumference and about 1/8 in thickness, with threads cut on 16 to the inch and 1/4 in depth. Cylinder working on an iron rod which runs through cylinder, and held in position at each end of cylinder by open brass work. Rod works through brass bearings, threaded to correspond with cylinder. The machine is screwed to a pine board. The mouthpiece is a small wooden round box, lid off, and hole 1/4 inch in diameter cut out of bottom. Small rubber tubing laid in box, on that a regular telephonic diaphragm with more tubing on top, the whole being fastened down by brads. The spring is thin brass fastened to mouthpiece holder, and reaches to center of diaphragm. A common steel sewing needle, large size, point rounded off a little, 1/2 or 3/4 inch long, is driven half through brass spring. Upper end of needle has small piece of rubber on, which rests lightly against diaphragm, other end running in groove on cylinder. Makes a slight mark on tinfoil when I turn crank, and slight indentations when I talk on the diaphragm. The reproduction is a grating sound. What is the fault and how can I remedy it? A. Scientific American Supplement No. 183 will contain full information for the construction of a phonograph.

(18) A. asks: 1. How can I decompose water by electricity? A small volume of water only. Is it necessary that the current pass directly through the water? A. Place water in a suitable vessel and add to it a small quantity of sulphuric acid to increase its electrical conductivity. Fill two test tubes with the acidulated water and support them with their mouths below the surface of the water in the vessel. In the mouth of each tube insert a plate of platinum, and connect the plate with the poles of a battery of 4 or 6 Daniell cells. Oxygen is liberated at the positive pole, and hydrogen at the negative pole. 2. Would magnetism or electricity generated by friction answer the same purpose? A. Static electricity decomposes water feebly, &c. Is there any other practicable way of decomposing water? A. By subjecting steam to an intense heat.

(19) C. W. D. writes: 1. There are parties making chilled plows who claim they chill or harden their iron by putting something in the ladle of melted iron before pouring it into the moulds. Can you tell me of anything that will do the same? A. We do not know of anything. If any of our readers can furnish information on the subject, we would be glad to hear from them. 2. What is the result of putting scrap iron or steel in the anvil when melting, or in the ladle of melted iron? Does it melt and unite with the cast iron? If so, does it do any good, or does it burn up and amount to nothing? A. It generally improves the product. 3. Will malleable iron melt in with cast iron in a crucible? A. Yes.

Can you tell me where I can buy a mechanical pigeon like the one described in your "Science Record" of 1878, p. 548? A. You can obtain it from a dealer in sportsman's goods.

(20) R. D. asks: Can you inform me of any material which, if put in a cup or other vessel, would disengage sulphurous or other poisonous fumes sufficient to saturate a confined space of 1 cubic yard at a cost of 5 to 10 cents without the use of fire? A. Throw a few scraps of zinc and a drachm of arsenious acid into a wide-mouthed bottle containing dilute sulphuric or hydrochloric acid. The gas given off--arsenious hydride--is extremely poisonous even when diluted with much air. Hydrogen sulphide may be economically procured by the action of dilute oil of vitriol on pulverized ferric sulphide (FeS); this is prepared by exposing red hot iron filings to fused sulphur, or by fusing together in a crucible 5 1/2 parts of iron and 12 parts of common crystallized iron pyrites (FeS<sub>2</sub>).

OFFICIAL INDEX OF INVENTIONS FOR WHICH Letters Patent of the United States were Granted in the Week Ending May 7, 1878, AND EACH HEARING THAT DATE. [Those marked (r) are renewed patents.]

A complete copy of any patent in the annexed list, including both the specifications and drawings, will be furnished from this office for one dollar. In ordering, please state the number and date of the patent desired and remit to Munn & Co., 37 Park Row, New York city.

Table listing inventions with patent numbers and names of inventors. Includes entries like: Alloy, manganese, R. Hale; Animal trap, J. H. & W. Morris; Apple worm, trapping the, A. Greenman; Auger, hollow, G. N. Stearns; Bag tag and fastener, W. G. Smitoot; Bale tie, C. Batele; Bale tie, C. Ewing; Bale tie, D. Hall; Barrels, veneers for, C. W. Thompson; Basins, etc., valve attachment, F. E. Kernochan; Battery cells, cap for, W. Boekel; Bedstead, sofa, W. J. Myers; Bee hive, Buzzard & Snyder; Beehive, J. Young; Belting for elevators, etc., F. H. C. Mey; Belting, metallic, F. H. C. Mey; Binder, temporary, W. A. Amberg; Bit brace, N. Spofford; Blower, fan, T. Wise; Blower machine, fan, A. K. Hert; Bolt, door, H. M. Moffatt; Book, J. J. Brunor; Boot, etc., machine, M. A. Tyler; Bootheeling machine, C. W. Glidden; Boots and shoes, finishing, C. C. Green; Boots and shoes, seams of, G. Stribley; Bottle filling apparatus, H. Codd; Box, honey, J. E. Moore; Boxes, packing, F. Myers; Bracelet, S. P. Cox; Brake, steam, J. Hickey; Brakeshoe, H. L. Perrine; Brake wagon, A. R. Cushman; Bread, moulding, A. E. Muth; Brick and tile machine, J. C. McKenzie; Bridle, etc., combined, E. Cox; Brush, B. C. Frohisher; Brush, automatic, J. P. Kelso; Brush, hair, D. B. Lovejoy; Brush, paint, J. S. Gilligan; Building, agricultural, L. J. Hesse; Bung, G. Borst; Buoy, G. D. Wyckoff; Button fastening, C. M. Platt; Button, sleeve or collar, C. A. Wood; Cages, cup for animal, O. Lindemann; Cake cutter, etc., combined, H. M. Avers; Camera shutter, A. Johnson; Can, sheet metal, J. Salter; Cans, filling, V. Barker; Car coupling, F. Heavener; Car, refrigerator, J. J. Bate; Car starter, N. Van Vele; Care, draw bar for, J. W. Law; Carbureter, S. E. Hughes; Carbureter, J. Reed; Carbureter, B. Sloper; Card, postal, F. W. Brooks; Carpets weaver, H. E. Noyes; Carriage top prop, H. S. Crandal; Carriages, front gear for, Dollason & Leonard; Caulerizer, Stohlmann & Farre; Chair, folding rocking, J. E. Wakefield; Chair, rocking, Rhomer & Willershausen; Checkbook, bank, H. H. Norrington; Chimney cap or ventilator, P. Mihan; Chimney, heating and ventilating, J. Browell; Churn, B. Clark; Clock, pendulum adjustment, H. C. Grawe; Cloth finishing machine, D. C. Sumner; Clothes drier, W. K. Morgan; Clothes line holder, Sawyers & Gallisan; Clothes powder, W. P. Dunagan, Jr.; Cockle separator, Newell, Sr. & Croft; Coffee pot, C. Halstead; Coffee pot, F. H. Hunt; Condenser, R. W. Hamilton; Cooker, steam, C. Corning; Corn cutting implement, L. Blockel; Corset busk, J. D. Banfield; Corsets, springs, T. B. De Forest; Cultivator, D. L. Wellman; Cultivator, rotary, M. Johnson; Cultivator tooth, H. Carson; Current wheel, E. H. Smith; Curry comb, N. W. Mottlinger; Curtain lifters, H. Herit; Curtain roller and bracket, Buckley & Sawyer; Curtain roller and bracket, C. B. Clark; Dental engine, J. M. Stebbins; Dental engine band piece, E. T. Starr; Desk, school, G. Elsey; Doorecheck, J. R. Watkins; Draft equalizer, J. Sebastian; Drawing heads, F. E. Tabor; Drill, band, C. L. Bellamy; Drilling apparatus, oil well, J. S. Bishop; Eave trough former, G. Eckel; Egg carrier, J. H. McCarron; Egg cases, tray for, D. E. Dutrow; Electric machine, C. F. Brush; Electric machines, armature for, C. F. Brush; Elevator, hydraulic, M. P. Higgins; Elevator, hydraulic, M. L. Wyman; Elevators, hydraulic, F. B. Perkins; Engine, pumping, J. H. Valle; Engine, wind, H. C. Miner; Envelope, A. Daul; Envelope and paper fastener, Westwood & Pfreger; Explosive compound, E. Monakay; Fan, automatic, G. A. C. Meyer; Fancet, E. West; Feed water heater, P. C. Wortman; Feed water for locomotives, J. E. Wootten; Fence wire, barbed, O. O. Kittleton; Fences, strengthening, F. L. Sarmiento; Finger ring, W. B. Closson; Fire escape, J. Broughton; Fireplace, J. M. Yabres; Flower pots, making, J. Brasita; Fog signal, S. C. Maine; Fork, carrying, E. Cady; Fork, carrying, R. W. Galham; Fruit picker, J. Holman.

 Planters, checkerwork for, H. N. McCououghey..... 203,357  
 Plow, suiky, J. W. Eberhart..... 203,432  
 Plows, wheel attachment for, J. Clayton..... 203,430  
 Pocketbook, M. Schupp..... 203,504  
 Potato digger, H. C. Miner..... 203,481  
 Press and sausage stuffer, hard, etc., S. J. Keim..... 203,345  
 Pressing and moulding substances, W. Munzer..... 203,382  
 Printer's quoin, R. A. Warren (r)..... 8,210  
 Printing block, chromatic, T. D. Osborne..... 203,490  
 Printing machine, plate, Kenworthy & McGregor..... 203,465  
 Printing press, E. L. Gilman..... 203,335  
 Pump, S. M. Cole..... 203,421  
 Pump rod attachment for wells, V. C. Gihmore..... 200,200  
 Pumps, motor for operating, J. W. Law..... 280,280  
 Railway track, street, J. A. Kirby..... 203,463  
 Retort lifter, F. W. Wilson..... 203,397  
 Retort, metallic, W. H. Seaman..... 203,378  
 Roll, erushing and grinding, D. C. Newell..... 203,364  
 Roofing slates, fastening, G. Maranville..... 203,353  
 Rope tramway and apparatus, T. H. Day..... 206,249  
 Saddle loop, A. Gilliam..... 203,258  
 Saw filer, gin, E. L. Harris..... 203,388  
 Saw filing machine, W. T. Smith..... 203,383  
 Saw mill dog, D. Lane..... 203,469  
 Saw mills, log carriage gear for, W. Lamb..... 203,467  
 Scale beam, A. B. Pearson..... 203,290  
 Sewers, wooden, Herrmann & Saxon..... 203,341  
 Sewing machine attachment, Morris & Hollenbeck..... 203,287  
 Shade roller, spring, C. Bismann..... 203,404  
 Shears for cutting sheet material, D. F. Hartford..... 203,449  
 Shoe, B. M. Gibson..... 203,439  
 Shoemaker's jack, Rogers & Fuller..... 203,376  
 Shoulder brace and suspenders, N. Van Allen..... 203,301  
 Shovel, dust, J. A. Juhnry..... 203,277  
 Shovel handle, J. F. Milligan..... 203,339  
 Shovel, snow, A. S. Robinson..... 203,375  
 Sleigh knee, Larson & Livermore..... 203,470  
 Snap hook, C. F. Bonfoey..... 203,288  
 Snap hook, R. W. Jones..... 203,461  
 Sorghum and maize, clarifying, F. L. Stewart..... 203,507  
 Spherical bottles, cutting, R. W. Wheeler..... 203,515  
 Spinning machines, tier bearing for, E. A. Cowper..... 203,424  
 Spinning mules, etc., regulator for, C. H. Colbrook..... 203,244  
 Spring brace, vehicle, A. Elkatt..... 203,500  
 Spring, vehicle, J. F. Thompson..... 203,508  
 Sprinkler, J. E. New..... 203,487  
 Stalk cutter, S. B. & H. J. Adams..... 203,311  
 Stamp, hand, J. F. W. Dorman (r)..... 8,223  
 Stereoscope, Wheeler & Bazin (r)..... 8,218  
 Stove hearth, S. A. Kinsey..... 203,278  
 Stove, heating, M. C. Hawley..... 203,289  
 Stove oven sheif, B. F. Clement..... 203,242  
 Stovepipe thimble, P. Mihan..... 203,478  
 Stove polishing compound, H. S. Ziegler..... 203,309  
 Swivel joint, A. Work..... 203,307

'Iap, champagne, W. & R. Beutley..... 203,314  
 Target thrower, ball, M. E. Curd..... 203,416  
 Telegraphic lines, movements for, P. La Cour..... 203,423  
 Telephones, circuit for speaking, E. Gray..... 203,374  
 Tent, awning, etc., M. R. Kunkey..... 203,379  
 Thrashing machine, J. Brown..... 203,318  
 Thrashing machine brace, J. Wisda..... 203,398  
 Tongue support, wagon, Hart & Webster..... 203,339  
 Torpedo, propelling submarine, J. Ericsson..... 203,435  
 Toy steam fire engine, G. H. Ireland..... 203,459  
 Track clearer, G. Hoyal..... 203,577  
 Traveling bag handle, G. Willringhaus..... 203,516  
 Truck, convertible car, W. L. Rankins..... 203,439  
 Valve and cock, steam, T. J. Paradise..... 203,433  
 Valve attachment, H. T. Ashton (r)..... 8,211  
 Vegetable cutter, H. E. Hewitt..... 203,453  
 Vehicle op, T. E. & J. H. Hayes..... 203,450  
 Ventilator, C. M. Handover..... 203,417  
 Vessel loading apparatus, Gleistrup & Field..... 203,324  
 Wall protector, G. C. Bovey..... 203,341  
 Washboller bottom, C. R. Everson..... 203,331  
 Washing machine, C. A. Dodge..... 203,250  
 Washing machine, J. M. Oakley..... 203,386  
 Washing machine, Overshiner & Shannon..... 203,387  
 Watches, winding attachment for, C. W. Hoehn..... 203,435  
 Weather strip, Harris & Williams..... 203,448  
 Wheels, sand band for vehicle, C. Breed..... 203,259  
 Windlass, portable hand, O. Frederickson..... 203,393  
 Window shade, A. W. Laue..... 203,468  
 Wire drawing, Kenerson & Morgan..... 203,346  
 Wood, filling grain of, N. Wheeler..... 203,304  
 Wrench, G. S. Goodspeed..... 203,282  
 Wrench, bung, G. W. Phillipi..... 203,486  
 Wrench, pipe, L. Glynn..... 203,261  
 Wringer, mop, H. Russell..... 203,501  
 Yucca, machine for mashing, A. Stoner..... 203,396

English Patents Issued to Americans.

From June 4 to June 11, 1878, inclusive.  
 Carriage step.—F. A. Sawyer, Boston, Mass.  
 Cash recording machine.—John Moss et al., N. Y. city.  
 Coating wire.—C. H. Morgan et al., Worcester, Mass.  
 Compressing machine.—A. F. Nagle, Providence, R. I.  
 Dressing meal.—M. G. Cogswell, N. Y. city.  
 Firearms.—J. W. Wilson et al., San Francisco, Cal.  
 Manufacture of camphor.—W. F. Simes, Philadelphia, Pa.  
 Paper boxes.—C. M. Arthur et al., Derby, Conn.  
 Pavement.—P. Zadig, San Francisco, Cal.  
 Piston rod packing.—A. D. Spencer, Baltimore, Md.  
 Pump.—W. P. Barelay, Virginia, Nev.  
 Railroad switches.—E. Gordon, et al., Hyde Park, Mass.  
 Roller bearings.—J. G. Avery, Spencer, Mass.  
 Sewer gas, removing.—E. J. Corbett, San Francisco, Cal.  
 Sewing machines.—F. H. Roman, Philadelphia, Pa.  
 Valve register.—A. Andren, Boston, Mass.  
 Ventilating apparatus.—G. W. Wilcox, Washington, D. C.  
 Watches.—D. A. A. Baker, Worcester, Mass.  
 Weaver's harness.—J. H. Crowell, Providence, R. I.

The Scientific American EXPORT EDITION. PUBLISHED MONTHLY.

THE SCIENTIFIC AMERICAN Export Edition is a large and SPLENDID PERIODICAL, issued once a month, forming a complete and interesting Monthly Record of all Progress in Science and the Useful Arts throughout the World. Each number contains about ONE HUNDRED LARGE QUARTO PAGES, profusely illustrated, embracing:  
 (1) Most of the plates and pages of the four preceding weekly issues of the SCIENTIFIC AMERICAN, with its SPLENDID ENGRAVINGS AND VALUABLE INFORMATION.  
 (2) Commercial, Trade, and Manufacturing announcements of leading houses.  
 Terms for Export Edition, \$5.00 a year, sent prepaid to any part of the world. Single copies, 50 cents.  
 For sale at this office. To be had at all News and Book Stores throughout the country.  
**NOW READY.**  
 SCIENTIFIC AMERICAN for June, 1878, with Eighty-eight Engravings.

GENERAL TABLE OF CONTENTS.

The Sponge Trade of the Bahamas; interesting particulars.  
 How America is Crowding England in the Supply of Foreign Markets.  
 Do Inventions Injure the Laborer? A valuable paper full of remarkable statistics showing what inventors have done and are doing for the benefit of workers.  
 Examples of Successful Meddlers in Arts in Which They are not Skilled.  
 The Importance of Our Internal Commerce.  
 Silk Industry at Home and Abroad.  
 California vs. Australian Wool.  
 A New Mint for Honduras.  
 The Chinese Sailor Question.  
 Narrow Gauge Railway to the West.  
 The Industrial Importance of Small Manufacturers.  
 Successful Introduction of American Knit-goods in England.  
 Success of American Competition in the Manufacture of Cutlery.  
 How British Commerce Helps British Manufacturers.  
 The Texas Live Cattle Trade.  
 Glass Making at Pittsburg, Pa.  
 American Trade with Belgium.  
 American Carpet Production.  
 The Extension of American Commerce.  
 Progress and Prosperity of Barron, Eng.  
 American Productions Abroad.  
 American Trade with Brazil; Statistics of American Petroleum Exports.  
 Meat and Beer Sent to Europe.  
 American Exports and the Strikers in England.  
 The Industrial West.  
 Good Work from Cheap Patents.  
 Value of New Industries.  
 Statistics of American Exports.  
 Live Hogs for England.  
 Six Years' Progress in Steel Making.  
 American Silk Culture.  
 The Sugar We Use.  
 The Coffee We Drink.  
 American Leather in Europe.  
 American Stamping Mill for Peru.  
 How to Make a Market for Iron and Steel.  
 American Street Cars in Foreign Countries.  
 American Illustrated Advertising.  
 Ohio Trade.  
 Wages in France.  
 The South as a Field for Manufactures.  
 Work for New York City.  
 American Workmanship as Seen in Foreign Countries.  
 Progress in Hard Times.  
 How to Set Steam Balers; two figures.  
 New Mode of Equalizing the Wear of Pistons and Horizontal Engines.  
 Clearance and Compression; a concise explanation of these terms.  
 The Roberts Steam Engine and Boiler; two illustrations.  
 Important Facts Concerning Boiler Corrosion.  
 New Vertical Steam Engines and Boilers; two engravings.  
 The New Steam Locomotive Barrancas; one engraving.  
 Remarkable Locomotive Performances.  
 Horizontal Engine with Coleman's Valve Gear; with five illustrations.  
 Progress of the Great St. Gothard Tunnel.  
 Method of Connecting a Leading Screw—By Josina Rose; two illustrations.  
 First Invention of the Iron Frame for Pianos.  
 A Japanese Brazz Factory.  
 A Razor Grinding Machine Wanted.  
 A Perpetual Moving Clock.  
 The Elevated Street Railways of New York City; with five excellent engravings.  
 Opening of the Metropolitan Elevated Railway.  
 Artificial Fuels; a description of the best methods now used.  
 Singular Effects of Carbon in a Blast Furnace.  
 Silver Mining in Massachusetts; being an interesting description of the present status of the great gold, silver, copper and lead mines at Newburyport, Mass.  
 Silver in the Arts, by Edwin C. Taylor.  
 The Extent and Methods of Counterfeiting Coins.  
 Asphalt Wood Pavements.  
 The London Water Works.  
 Fire Works, How Made; with illustrations, six figures.  
 Holcomb's Hot Air Furnace; one engraving.  
 Mississippi Jeties.  
 The Problem of Unsinkable Ships.  
 Russian Steel Torpedo Boats; with five illustrations.  
 Crispin's Collapsing and Portable Boats; two engravings.  
 A Steel Steamer.  
 A New Plan of Warfare.  
 Characteristics of American Steam Fire Engines.  
 Driving Piles in Sand.  
 New Machine for Making Cigarettes; one engraving.  
 New Instrument for Testing Gold and Silver Coins; one engraving.  
 Stevens' New Vertical and Horizontal Vise; two illustrations.  
 Cummings' New Dustless Ash-Sifter; one engraving.  
 Andrews' Stovepipe Blower for Increasing the Draught of Stoves; one engraving.  
 Volle's New Mosquito Net Frame; three illustrations.  
 A Curious Perpetual Motion; one figure.  
 New Portable Blacksmith's Forge; two engravings.  
 Improved Signal Egg Boiler; one engraving.  
 Descriptions of the Most Interesting Recently Patented Mechanical and Agricultural Inventions.  
 Hydraulic Salt Mining in Bavaria.  
 History and General Description of Gas Engine Motors.  
 New Ether Ice Machine; one engraving.  
 Brush Making by Machinery; with six illustrations.  
 Noteman's Improved Rotary Force Pumps; three illustrations.  
 Manville's Improved Geared Shaper; one engraving.  
 New Single Arch Bridge Proposed for the Thames River, London; with one engraving.  
 New Automatic Knife Grinder; one engraving.  
 New Shoe Brush; one engraving.  
 New Lathes for Turning Spheres; four figures.  
 A New Wheel Tree.  
 Smith's Improved Wagon Jack; one engraving.  
 Graether's Improved Sled, two figures.  
 Lungren's Improved Argand Lamp Burner; three figures.  
 New Ironing Table; one figure.  
 New Chain Pump; one figure.  
 The New Process of Flour Making.  
 Recipe for Making Fine Japanese Cement.  
 How Japanese Kaga Wire is made.  
 Adulterations of Soap.  
 Olive Oil Soap Manufacture.  
 Fibrin.  
 Catalpa Trees; remarkable durability of the wood; the various species and their culture.  
 Fence economics.  
 The Great Exhibition at Paris.  
 Exhibition Building at the Trocadero; one large engraving.  
 Steel Exhibits, by Jessop & Sons.  
 The Exhibit of American Glass Ball Casters; one engraving.  
 The International Avenue; one engraving.  
 Reapers and Mowers at the Paris Exhibition, by Edward H. Knight.  
 Carr's Improved Dragger; one engraving.  
 Firing Guns Under Water; experiments of Professor Mott.  
 Adams' Device for Cooking by Solar Heat; with one engraving.  
 Manufacture of Chloride of Lime.  
 Curious Experiments with Ozone.  
 The Newton Photo Process.  
 Amount of Sugar in Strawberries, Pineapples, Cherries, Currants, Beets, Cane, and other products.  
 Some Recent Facts about Common Poisons; Strychnine, Arsenic, Lead, Opium, Muscarin.  
 The Physiological Effects of Thirst.  
 New Remedy for Suppurating Wounds, by Dr. Waters.  
 The Electrical Gyroscope, by George M. Hopkins; with one large engraving, and description showing the

construction and operation of this curious electrical instrument.  
 The Largest Electrotpe ever Made.  
 Notes on the Telephone, by L. S. Duerce; with one engraving.  
 A New Mouth Telegraph.  
 The Carbon Telephone, with five illustrations.  
 Edison's Micro-Tachometer; with four illustrations.  
 Hughes' Microp line.  
 Interesting Electrical and Magnetic Experiments, Production of Composite Portraits.  
 Remarkable Performances of the Phonograph.  
 Trouve's New Telephone Improvements.  
 Soundings of the South Atlantic.  
 The Brownian Movement.  
 Physiological Treatment of Stuttering.  
 Respiration at High Altitudes, by Dr. William Marcet.  
 Water in the Ears—A Warning to Bathers.  
 Sample of an Egg within an Egg.  
 Two Remarkable Accidents.  
 The Ant Bear one engraving.  
 The Earthquakes of Fifteen Centuries.  
 Recent Eruption of Mt. Hecla; one engraving.  
 A Natural Theater near Canoh City.  
 African Explorations.  
 Grounding and Capture of a Large Female Sperm Whale.  
 Bedbugs Found in Swallows' Nests.  
 Bels Attacking Shad.  
 Osmarazine Under the Microscope.  
 The Prairie Dog and its Uninvited Guests; one engraving.  
 Remarkable Antediluvian Remains Discovered in the Rocky Mountains; one engraving.  
 Mexican Flora, the Agave, Cactus, and Melocactus; one engraving.  
 Vegetable Anatomy; with one engraving of Venus' Fly Trap.  
 Leaf Veins of Poison Hemlock.  
 Habits of Fur Bearing Seals.  
 Rare Birds at Central Park.  
 The American Oyster.  
 Solid Hoofed Pigs.  
 A Honey Bee Ship.  
 A River Reversed.  
 Tricking in Shad.  
 The Bahama Pineapple Tree.  
 Plant Blights or Moulds; eight figures.  
 The Nerves of Plants.  
 The Olive as an American Product.  
 Birds of Paradise; one engraving.  
 Interesting Biographical Sketch of the late Professor Joseph Henry.  
 American Association for the Advancement of Science.  
 Biographical Sketch and Portrait of the late M. Becquerel.  
 American Society of Engineers.  
 Appointment of Professor Morton to the Lighthouse Board.  
 Election of Professor Baird as Secretary of the Smithsonian Institution.  
 Swiss Testimony to the Advantages of the American Patent System.  
 Conditions and Habits of French Workingmen.  
 African Diamonds; where and how found.  
 Operations of the Agricultural Department at Washington.  
 Operations of the American Fish Commissioners.  
 Notes of Recent Patent Office Decisions.  
 Some Remarkable American Inventions.  
 Astronomical Notes, showing the position, rise, and setting of the stars and planets for the North.  
 Planetary Population, by Professor Newcomb.  
 Observations on the Transit of Mercury, by Alfred M. Mayer. 1 figure.  
 Mr. Henry Harrison's Remarkable Painting of the Moon.  
 Formation of Planetary Rings and Satellites.  
 Is there a Hole through Mercury?  
 Answers to Correspondents, embodying a large quantity of valuable information, practical recipes, and instructions in various arts.  
 Single numbers of the Scientific American Export Edition, 50 cents. To be had at this office, and at all news stores.  
**MUNN & CO., PUBLISHERS.**  
 37 PARK ROW, NEW YORK.

THE Scientific American. The Most Popular Scientific Paper in the World. THIRTY-THIRD YEAR.

Only \$3.20 a Year including Postage. Weekly. 52 Numbers a Year.  
 This widely circulated and splendidly illustrated paper is published weekly. Every number contains sixteen pages of useful information, and a large number of original engravings of new inventions and discoveries, representing Engineering Works, Steam Machinery, New Inventions, Novelties in Mechanics, Manufacture, Chemistry, Electricity, Telegraphy, Photography, Architecture, Agriculture, Horticulture, Natural History, etc.  
 All Classes of Readers find in THE SCIENTIFIC AMERICAN a popular volume of the best scientific information of the day; and it is therefore the publishers to present it in an attractive form, avoiding as much as possible abstruse terms. To every intelligent mind, this Journal affords a constant supply of instructive reading. It is promotive of knowledge and progress in every community where it circulates.  
 Terms of Subscription.—One copy of THE SCIENTIFIC AMERICAN will be sent for one year—52 numbers—postage prepaid, to any subscriber in the United States or Canada, on receipt of three dollars and twenty cents by the publishers; six months, \$1.60; three months, \$1.00.  
 Clubs.—One extra copy of THE SCIENTIFIC AMERICAN will be supplied gratis for each club of five subscribers at \$1.20 each; additional copies at same proportionate rate. Postage prepaid.  
 One copy of THE SCIENTIFIC AMERICAN and one copy of THE SCIENTIFIC AMERICAN SUPPLEMENT will be sent for one year, postage prepaid, to any subscriber in the United States or Canada, on receipt of seven dollars by the publishers.  
 The safest way to remit is by Postal Order, Draft, or Express. Money carefully placed inside of envelopes, securely sealed, and correctly addressed, seldom goes astray, but is at the sender's risk. Address all letters and make all orders, drafts, etc., payable to  
**MUNN & CO.,**  
 37 Park Row, New York.  
 To Foreign Subscribers.—Under the facilities of the Postal Union, the SCIENTIFIC AMERICAN is now sent by post direct from New York, with regularity, to subscribers in Great Britain, India, Australia, and all other British colonies; to France, Austria, Belgium, Germany, Russia, and all other European States; Japan, Brazil, Mexico, and all States of Central and South America. Terms, when sent to foreign countries, Canada excepted, \$4.00, for SCIENTIFIC AMERICAN, 1 year; \$9.00, for both SCIENTIFIC AMERICAN and SUPPLEMENT for 1 year. This includes postage, which we pay. Remit by postal order or draft to order of Munn & Co., 37 Park Row, New York.
