## Business and Personal.

The Charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

The best results are obtained by the Imp. Eureka Turbine wheel,and Barber's Pat. Putvertzing Mills. Send for descriptive pamphlets to Barber & Son, Allentown, Pa.

Catechism of the Locomotive, 625 pages, 250 engravings. The most accurate, complete, and easily under-stood book on the Locomotive. Price \$2.50. Send for catalogue of railroad books. The Railroad Gazette, 73 Broadway, New York.

H. W. Johns' Liquid Paints are strictly pure linseed oil paints, and contain no water. They are the best and most economical paints in the world.

Trout and other fish sure to bite. See outside page. Cutters shaped entirely by machinery for cutting teeth of gear wheels. Pratt & Whitney Co., Hartford, Conn.

For Sationary or Portable Engines, Circular Saw Mills, Grist Mills, and Mill Machinery, good and cheap, address the old manufacturers of Cooper Mfg. Co., Mt. Vernon, O.

For Sale.-10. in x 30 in. Horizontal Engine, Huntoon governor, 9 ft. band wheel, 18 in. face, \$325; 8 in. x 8 in. New Yacht Engine, 3 in. shaft, built to order, \$250. W Walter, 541 West 35th St., New York.

A Draughtsman of many years' experience desires a situation : best of references. Address T. Y. Edwards. Brooklyn, E.D., N. Y.

Downer's Anti-Incrustation Liquid, for the removal and prevention of scale in steam boilers. is safe. effective, and economical. Fully guaranteed. Try it. 17 Peck Slip, New York.

Wanted .- We wish to do Drop Forgings in exchange for new or good second-hand Milling Machines. W. H. Baker & Co., Syracuse, Makers of Breech-loading Guns.

H. Prentiss & Co., 14 Dey St., New York, Manufs. Taps, Dies, Screw Plates, Reamers, etc. Send for list.

"Workshop Receipts" for Manufacturers, Mechanics, and Scientific A mateurs. Illustrated. \$2, mail free. E. & F. N. Spon, 448 Broome St., New York.

For Screw Cutting Engine Lathes of 14, 15, 18, and 22 in. Swing. Address Star Tool Co., Providence, R. I. Shaw's Noise Quieting Nozzles subdivide the steam

into numerous fine streams. All parties are cautioned against purchasing from infringers. T. Shaw, 915 Ridge Ave., Philadelphia, Pa.

The Horton Lathe Chucks; prices reduced 30 per cent. Address The E. Horton & Son Co., Windsor Locks, Conn. For Sale - A New No. 5 Stiles & Parker Geared Punching Press; latest and best; cheap; no use for it-

B. D. Washburn & Co., Boston, Mass Lincoln's Milling Machines; 17 and 20 in. Screw Lathes. Phœnix Iron Works, Hartford, Conn.

Air Guns.-H. M. Quackenbush, Manufacturer, Herkimer, N. Y.

Boilers ready for shipment. For a good Boiler send to Hilles & Jones, Wilmington, Del.

The only Portable Enginesattached to a boiler having cold bearings. The Peerless and Domestic. Francis Hershey, successor to F.F. & A.B. Landis, Lancaster, Pa.

Shaw's Mercury Gauges, 5 to 50,000 lbs.; accurate, reliable, and durable. T. Shaw, 915 Ridge Ave., Phila., Pa. New Pamphlet of "Burnham's Standard Turbine Wheel" sent free by N. F. Burnham. York, Pa.

Sheet Metal Presses, Ferracute Co., Bridgeton, N. J. Diamond Tools. J. Dickinson, 64 Nassau St., N.Y. Eagle Anvils, 9 cents per pound. Fully warranted. Clipper Injector. J. D. Lynde, Philadelphia, Pa.

A Cupola works best with forced blast from a Baker Blower. Wilbraham Bros., 2,318 Frankford Ave., Phila.

For Solid Wrought Iron Beams, etc., see advertisement. Address Union Iron Mills, Pittsburgh, Pa., for lithograph, etc.

Presses, Dies, and Tools for working Sheet Metal, etc. Fruit & other can tools. Bliss & Williams, B'klyn, N. Y.

Split Pulleys at low prices, and of same strength and appearance as Whole Pulleys. Yocom & Son's Shafting Works, Drinker St., Philadelphia, Pa.

The SCIENTIFIC AMERICAN Export Edition is published monthly, about the 15th of each month. Every number comprises most of the plates of the four preced-ing weekly numbers of the SCIENTIFIC AMERICAN, with other appropriate contents, business announcements, etc. It forms a large and splendid periodical of nearly one hundred quarto pages, each number illustrated with bout one hundred engravings. It is a complete record of American progress in the arts.

Forsaith & Co., Manchester, N. H., and 213 Centre St., New York. Specialties.-Bolt Forging Machines, Power Hammers, Combined Hand Fire Engines and Hose Carriages, new and 2d hand machinery. Send stamp for illustrated catalogues, stating just what you want.

Portland Cement-Roman & Keene's, for walks, cisterns. foundations, stables, cellars, bridges, reservoirs, breweries.etc. Remit 25 cents postage stamps for Practi-cal Treatise on Cements. S. L. Merchant & Co., 53 Broadway, New York.

Acme Lathes .-- Swing, 7 in.; tnrn, 19 in. long; back geared; screw cutting. Send 3 cent stamp for circular and price, to W. Donaldson, southwest corner Smith and Augusta, Cincinnati, Ohio.

The Improved Hydraulic Jacks, Punches, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

The best Friction Clutch Pulley and Friction Hoist. ing Machinery in the world, to be seen with power applied, 95 and 97 Liberty St., New York. D. Frisbie & Co., New Haven, Conn.

National Steam Pump; best and cheapest. Send for rices. National Iron Works, New Brunswick, N. J.

Wheels and Pinions, heavy and light, remarkably strong and durable. Especially suited for sugar mills and similar work. Circulars on application. Pittsburgh Steel Casting Company, Pittsburgh, Pa.

Wood-working Machinery, Waymouth Lathes. Specialty, Wardwell Patent Saw Bench; it has no equal. Rollstone Machine Company, Fitchburg, Mass.

The new "Otto" Silent Gas Engine is simple in construction, easy of management, and the cheapest motor known for intermittent work, Schleicher, Schumm & Co., Philadelphia, Pa.

The Twiss Automatic Engine; Also Vertical and Yacht Engines. N. W. Twiss, New Haven, Conn.

Pulverizing Mills for all hard substances and grinding purposes. Walker Bros. & Co., 23d & Wood St., Phila., Pa.

Manufacturers of Improved Goods who desire to build up a lucrative foreign trade, will do well to insert a well displayed advertisement in the SCIENTIFIC AMERICAN Expert Edition. This paper has a very large foreign circulation.

HINTS TO CORRESPONDENTS.

No attention will be paid to communications unless accompanied with the full name and address of the writer.

Names and addresses of correspondents will not be given to inquirers.

We renew our request that correspondents, in referring to former answers or articles, will be kind enough to name the date of the paper and thepage, or the number of the question.

Correspondents whose inquiries do not appear after reasonable time should repeat them.

Persons desiring special information which is purely of a personal character, and not of general interest, should remit from \$1 to \$5, according to the subject, as we cannot be expected to spend time and labor to obtain such information without remuneration. Any numbers of the SCIENTIFIC AMERICAN SUPPLE-

MENT referred to in these columns may be had at this office. Price 10 cents each.

(1) J. A. B. asks: Can you tell us of a good hair wash to strengthen the hair and scalp, after such a dangerous disease as typhoid fever? A. See Professor Wilson's paper on treatment of the hair, SCIENTIFIC AMERICAN SUPPLEMENT, No. 102.

(2) W. H. C. asks: 1. Does it take more battery power to ring an electric bell than to work a telegraph machine, and why, magnets of same resistance? A. No. 2. Why will an electric bell not work through a telephone, and vice versa? A. Because the introduction of either into the circuit increases the resistance beyond that which the battery is capable of vercoming.

(3) E. S. writes: 1. I have a lot of printed postal cards, and would like to wash the print off. How can it be done? A. We know of no practicable method. 2. Which is the most powerful known explosive, and how does it compare with powder? A. Probably the socalled chloride of nitrogen (described in most works on chemistry). For practical purposes, trinitroglycerine or Nobel's explosive gelatine-six to seven times as effective as common blasting powder. 3. What is the chemical composition of the saliva of rabid animals? A. Not determined, we believe. 4. Who invented the Gatling gun? A. Dr. R. J. Gatling, of Hartford, Conn. 5. With what kind of an instrument did the British give each other signals at long distances in the late Zulu war? A. With the heliograph.

(4) L. P. S. writes: I have several very rusty steel bits (for horses) which I wish to silver plate. I have a battery and every necessary for silver plating, but rust troubles me. How can I remove cheaply and quickly? Dip in warm muriatic acid for a moment and then scour with clean sand and water. Pickel in dilute (through slow oxidation) a faint, phosphorescent light. sulphuric acid, rinse, and suspend in the plating bath In utter darkness this light is faintly visible 100 yards without touching. 2. Also a large mirror which looks distant; at much greater distances with difficulty or as if it was dusty, but it is on the inside. Please tell how to brighten it up. A. Resilvering will be necessary. See p. 1670, No. 105, SCIENTIFIC AMERICAN SUPPLEMENT.

07854. 3. What kind of paint is best to put on a tin roof calendar. By making a further correction of one day that has been painted once with common paint, and every 4000th year, counting each 4000th year as not a leap water is used from the roof? A. A good asphaltum year—the error is so small that 21,600 years must elapse varnish answers very well.

(7) F. G. asks: Is there any truth in the assertion that anthracite coal loses its heating qualities after being exposed to the air for a length of time? A. No

(8) V. & B. ask what to impregnate wood with to render it incombustible. A. The following is one of the best: commercial tungstate of soda. 1 lb.: phosphate of soda, 1/4 lb.; water, 2 gallons; dissolve. Apply boiling hot if possible.

printing ink, which shall be a heavy black, and of a within the given circle, draw two diameters at right bright color after printing. A. Small quantities of a superfine ink may be prepared as follows: Balsam of two adjacent extremities of such diameter. The last copaivi, 9 ounces; lampblack, 3 ounces; indigo and Prus- line will be the side of the required square. Or, take sian blue, 114 ounce; Indian red, 34 ounce; yellow turpentine soap, dry, 3 ounces; grind upon a marble slab 3. What is cyanide potassium? A. Cyanide of potas-with a wooden muller until a pefectly smooth ink is ob-| sium is a compound of cyanogen and potassium tained

(10) J. E. L. asks (1) whether he can make a paper canoe by covering a light, strong wooden frame work with a single piece of common card board 1/4 inch thick and afterwards waterproofing the whole. A. Possibly; but we think it would not be serviceable. 2. What inexpensive substance can be used for the waterproofing? A. See answer to F. C. R. This page.

(11) F. C. R. writes: I am building a canvas boat, and would like to know what they use to waterproof canvas. A. The oiled waterproof is usually prepared by saturating the dry fabric with a varnish prepared about as follows: Boiled linseed oil, 100 parts; wax, 15 parts; litharge, 3; oil of turpentine, q.s. The oil is heated so as to readily melt the wax, which, toturpentine

(12) B. A. asks for the process for making chloride calcium. A. Dissolve marble dust, chalk, or lime, in hydrochloric (muriatic) acid, filter, concentrate the solution by heating it in an open porcelain lined water.

(13) C. L. D. asks: 1. Is there any means of melting India rubber and have it retain its original elastic property? Is there any means of applying it to wood and have it retain said property? A. No. Native gum caoutchouc (unvulcanized rubber) is soluble in bisulphide of carbon containing about six per cent of absolute alcohol. This solution on evaporating leaves the rubber in its original condition. 2. Is the slipping of belts affected by the distance the power stands from machine, and if so how? A. An increase in the length of a belt increases its weight between the pulleys; this of course increases the pressure and friction on the pul- AMERICAN SUPPLEMENT. leys.

(14) B. F. S. asks: Can a photograph be aken on any other substance than glass or tin? Can a picture be thrown upon some kind of material that can be lithographed from, without the process of drawing? A. Thereare several carbon and chromated gelatin processes-such as that Woodbury-that accomplish this. You will find several of them described in the SCIEN-TIFIC AMERICAN and SUPPLEMENT. Consult also Vogel's 'Chemistry of Light and Photography."

(15) A. M. asks: 1. How can I make a good telephone, or where can I find descriptions? A. See the SCIENTIFIC AMERICAN SUPPLEMENT, No. 142. 2. How can I keep copper ores from tarnishing without spoiling their general character, and if any lacquer is to be used, what is the best receipt? A. A thin coating of an alcoholic solution of bleached shellac will sometimes suffice.

(16) W. V. R. writes: I have a large pile of cinders, taken from a cupola after melting which contains a large per cent of iron. Can I, after cleaning or scouring, melt them without mixing with other iron? I have been told I could do so by using a flux of lime stone or oyster shells. This I do not understand. Can you inform me how to use the flux and in what propordiameter, in order to melt 1,500 or 2,000 lbs, of the scrap at a melt? A. The slag can be fused as suggested; but in order to determine the proportion of flux necessary the per cent of iron in the slag must be known. Unless the per cent of iron in the slag is very large it is very doubtful if it can be economically extracted.

(17) C. H. B. asks: 1. Is phosphorus very dangerous to handle? A. It may be handled with impunity under water-in the air it is inflamed by very slight friction at ordinary temperatures when dry. 2. Will it show light in the dark, and how far can it be seen? A. Exposed to the air and moisture it exhibits

before it will amount to a full day.

(19) E. S. W. asks: 1. How can I rid a house of cockroaches? A. A mixture, composed of 1 part of powdered borax and 2 parts of powdered sugar sprinkled upon the floor where they frequent, will soon eradicate them. 2. How can I find theside of the greatest square contained in a given circle? A. (a) If you mean the square exactly equal in area to the circle, it cannot be done. The square root of the area of the circle will give the side of a square approximately equal to the circle. Or multiply half the diameter of the circle by 3'14159. (b) (9) E. L. N. asks how to make a black If you mean the greatest square that can be drawn angles to each other and connect by a straight line any sium is a compound of cyanogen and potassium (KCy). It forms colorless cubic or octahedral crystals, deliquescent in the air, and exceedingly soluble in water. Its solution always has an alkaline reaction, and when exposed to the air exhales the odor of hydrocyanic (prussic) acid. The salt is anhydrous, and is nearly as poisonous as hydrocyanic acid itself.

(20) W. H. C. asks: 1. What quantity of soft iron wire should be used in the center of an induction coil 3 the size of that described in SUPPLEMENT No. 160? A. Make the binder of wires about 1/2 inch in diameter. 2. Why is wire better than one iron rod? A. A bundle of wires acquires and loses magnetism more rapidly than a solid rod of the same diameter.

(21) J. S. asks: How are carbon points that are used in electric lights made? A. By mixing getherwith the litharge, is then thoroughly incorporated finely pulverized gas carbon with a little coking coal, with it and the mixture thinned down sufficiently with and baking the mixture under pressure for several hours or days.

(22) A. D. asks: Will you be kind enough to inform me if there is any cure for premature gray hair? I am a young lady of 25 years, and my hair is rapidly turning grav. My hair is thick, and far below my waist pan, and collect the salt which separates on cooling. in length, but it is losing its dark color. Is there any-This should be strongly heated (with constant stirring) thing that could be taken internally to supply the colorto fusion in a clean iron pan to expel the remaining ing matter and restore the scalp to a healthy condition? A. Consult Scientific American, vol. 38, page 283 (12). The hair can be restored to a jet black, but probably only by artificial means, which are decidedly injurious to health. See lecture "Hygiene of the Hair," Professor Erasmus Wilson, SCIENTIFIC AMERICAN SUP-PLEMENT No. 102.

> (23) H. F. asks: Is there a book that contains all that is new relative to the telephone. microphone, phonograph, phonometer, etc.? A. Prescott's Speaking Telephone, Electric Light, and other Novelties," contains much on these subjects. You will also find these instruments described in the SCIENTIFIC

> MINERALS, ETC.-Specimens have been received from the following correspondents, and examined, with the results stated:

T. S. B.-It is spiegeleisen (mirror iron), produced by smelting, in a blast furnace with charcoal, a spathic iron ore containing a large percentage of manganese used in the Bessemer process of making steel .- W. W. S. -The supposed animated horse hair is a species of the genus gordius, frequently found in still water. Linnæus calls it gordius aquaticus .- P. B.-It is magnetite inclosing granules of apatite or phosphate of lime.-G. L. R. A .- If the pots are to be used for melting fine glass, a clay containing less oxide of iron will be requisite.-B.-The sand contains enough iron to unfit it for fine glass,-J. M. H.-The gravel in large box consists chiefly of quartz mica, hornblende, and feldspar, derived from the disintegration of a synaitic granite. The sample in small box contains much graphite.-D. M.-A dolerite  $containing\ {\bf crystallized}\ lime\ {\bf carbonate}\ {\bf and}\ {\bf iron\ sulphide}$ -pyrite,-J. W. C.-Quartz containing illmenite-titaniferous iron, and a trace of copper. The quartz is not auriferous.-W. J. B.-No. 1. Haytorite-a quartz pseudomorph after datholite. No. 2. It is composed chiefly of silica and aluminum silicate, with traces of tions, etc., to charge the cupola, which is 22 inches lime phosphate and sulphate.-H. T.-It is galena (lead sulphide), a valuable ore of lead.

## COMMUNICATIONS RECEIVED.

Linen Hose.-Sizes: 11/2 in., 20c.; 2 in., 25c; 21/2 in., 29c. per foot, subject to large discount. For price lists of all sizes, also rubber lined linen hose, address Eureka Fire Hose Company, No. 13 Barclay St., New York.

Nickel Plating.-A white deposit guaranteed by using ourmaterial. Condit, Hanson & Van Winkle, Newark, N.J.

Needle Pointed Iron. Brass. and Steel Wire for all purposes. W. Crabb, Newark, N. J.

The Lathes. Planers. Drills, and other Tools, new and econd-hand, of the Wood & Light Machine Company, Worcester, are being sold out very low by the George Place Machinery Agency, 121 Chambers St., New York.

Hydraulic Presses and Jacks, new and second hand, Lathes and Machinery for Polishing and Buffing Metals. E. Lyon & Co., 470 Grand St., N. Y.

Solid Emery Vulcanite Wheels-The Solid Original Emery Wheel - other kinds imitations and inferior. Caution .- Our name is stamped in full on all our best Standard Belting, Packing, and Hose. Buy that only The best is the cheapest. New York Belting and Packing Company, 37 and 38 Park Row, N. Y.

Dead Pulleys that stop the running of loose pulleys and their belts, controlled from any point. Send for catalogue. Taper Sleeve Pulley Works, Erie, Pa.

(5) C. L. asks (1) how stove cement is made? A. Moisten iron filings with strong aqueous solution of salammoniac (ammonium chloride). A little sulphur is sometimes added, to make the cement harden | Explain all about leap years. A. The earthmakes the quicker, but it is better without. 2. Which is the best two horse engine in market? A. We cannot undertake to decide between rival manufacturers. 3. What material would you use for cleaning white shirts made dirty through wear, and which resist washing and bleaching? A. Soak in a 10 per cent solution of chloride of lime (calcium hypochlorite), then in water containing about three per cent of sulphuric acid, and finallyrinse well in cold water.

(6) F. C. F. wishes to know (1) the horse power of an engine, cylinder 6x14, 60 lbs. of steam, and 4th year except the hundreds not divisible by 400) the

making 120 revolutions per minute. A. See p. 267 (4). current volume. 2. What is the rule to find the area civil and solar years are closely reconciled, the object 

not at all. 3. What other substance that will show light without flame? A. You might substitute a small spiral of platinum wire heated to incandescence by the passage of an electric current.

(18) F. S. asks (1) if the year 1900 is a leap year. A. No, since it is not divided by 400. 2. circuit of the sun in 365 days 5 hours and 48 minutes 49062 seconds. This is called the solar year. The civil year is ordinarily 365 days, the excess (5h. 48m. 49062s.) amounting in 4 years to very nearly a day. Accordingly each 4th year is given 366 days. But this counts little too much, the excess amounting in a century to nearly a day. So, instead of calling the even hundred years leap years, they are made ordinary years of 365 days. This approximate correction involves an error of a little over one fourth of a day every century, which is nearly set right by counting each 400th year as a leap year. By these leap years and intercalated days (every

## INDEX OF INVENTIONS

FOR WHICH

Letters Patent of the United States were Granted in the Week Ending

April 29, 1879,

## AND EACH BEARING THAT DATE.

[Those marked (r) are reissued patents.]

A complete copy of any patent in the annexed list. including both the specifications and drawings, will be furnished from this office for one dollar. In ordering, please state the number and date of the patent desired and remit to Munn & Co., 37 Park Row, New York city.
