NEW BOORS AND PUBLICATIONS.
Around the World with General
Grant. By John Russell Young. New Grant. By John Russell Young. New
York: Subscription Book Department of York: Subscription Book Department of
the Americau News Company. Pub.
lished in 20 parts. Each 68 pp . 8 vo . I]lustrated. 50 cents.
Parts I. and II. of this splendid record of travel cover the experiences of General Grant in England. No
traveler was ever received with so much distinction by traveler was ever received with so much distinction by saw, under more favorable conditions, the best that the civilized world hasto offer. The narrative of hisjourney iscleverly told and lavishly illustrated; and, so far as
published, amply fulfills the promise of the publishers published, amply fulfills the promise of the publishers
to make it the finest record yet printed of a tour of the world. With such a wealth of superior material to interesting volume houng could scarcely fail to make an interesting volume, his skill and experience as a jour
nalist left no doubt of his making good use of his opportunities. It is not likely that any other writer will ever
have a story to tell involving so many brilliant scenes have a story to tell involving so many brilliant sce
or containing so much to gratify American pride.
Birds of the Colorado Valley. By Elliott Coues. Part First, Passeres to Laniidæ. Office.
It is rare that a book, more especially an official
document, is so much more than it professes to be as this admirable report of Dr. Coues. The value of the bibliographical appendix it is impossible to overestimate. The whole subject of the bibliography of North
American ornithology and of the synonomy of North American ornithology and of the synonomy of Norn
American birds has been worked up anew from the very beginning, every point being verified by personal investigation. It is by far the best work ever done in this tigation. It
department.
The Art Interchange. Volume II. Jauuary to June, 1879. New York: The Art
Interchange Publishing Company. Price $\$ 1.50$ a year.
This unpretending but sensible and admirably edited household journal deserves the cordial support of every
one who cares for the promotion of the polite arts. It is not only an art newspaper of a fine and discriminating character, but a periodical instruction book giving theoretical and practical lessons in art methods, which
will be found of value in every refined household. It is published fortnightly, and each number has twelve pages, with an occasional illustrated supplement.
Organic Chemistry, Practical and Theo-
Retical. By Hugh Clements Retrical. By Hugh Clements. Lo
Blackie \& Son, 16 mo , cl., pp. 283.
Specially designed for the students in the Science and Art Department, South Kensington. The descriptive
portion appeared originally in a series of articles in the English Mechanic, to which has been added some fifty pages on the identification of organic substances, a
short chapter on fixed and essential oils, a brief description of apparatus used in this department of chemistry, a list of practical questionsand exercises, and eighty or
more pages of papers set in organic chemistry at the more pages of papers set in organic chemistry at the
Kensington examinations (with answers) for the ten years ending 1878.

We renew our re
We renew our request that correspondents, in referring
to former answers or articles, will be kind to former answers or articles, will be kind enough to
name the date of the paper and the page, or the number of the question.
Correspondents whose inquiries do not appear after reasonable time should repeat them.
Persons desiring spectal information which is purely of a personal character, and not of general interest,
should remit from $\$ 1$ to $\$ 5$, according to the subject, as we cannot be expected to spend time and la Any numbinformation without remuneration, ment referred to in these columns may be had at this office. Price 10 cents each.
(1) S. S. H. asks: 1. What effect would the explosion of one pound of dynamite, 40 fathoms beneath the surface, have upon the larger fish in the imvicinity of the explosion would be killed through the rup ture of the air bladder and intestines; they would sink at once to the bottom. Those at a distance would be simply stunned, and would rise to the surface after a tlme.
2. If the effect is destructive, what would be the proba. ble diametevof the circle of death? A. Perhaps within a radius of 50 yards. 3. Measuring from the surface, A. The shock of the explosion would be felt most se verely downwards-it is difficult to estimate. The disturbance would reach the surface, but the concussion
there would be comparatively slight. 4. Do fish caught there would be comparatively slight. 4. Do fish caught
in this way become unfit for food; if so, in wLat way?
(2) D. H H. writes: 1 I have been get ting up a collection of entomological specimens for the
past 3 or 4 years, and I have found that my specimen are eaten by a small grub which spoils a great many of them. I think they must generste in the specimens, as some of them are not exposed to the air. Will, you
spease inform me what I can put on the insect that will please inform me what I can put on the insect that will
prevent these noths hatchingand not injure the specipens Would corrosive sublimate do to paint then
men with? A. Impregnate the specimens with a solution of arsenious acid in dilute alcohol. See p. 11 (40), volume
38 , Scientific American. 2. Will equal parts of alcohol 38, Scientipic American. 2. Will equal parts of alcohol
and water preserve zoological specimens as well as pure and water preservol? A. No. 3. Will you please inform me also
alcghol what is the latest illustrated work published on Ameri can insects and reptiles suitable to classify and study up entomological and zoological specimens?" A. Consur
Packard's "Guide to the Study of Insects," Westwood's
"' Thesaurus Entomologicus Oxoniensis," Nicholson's "Thesaurus Entomologicus Oxoniensis," N
(3) G. M. asks how methyl chloride can be used in the production of ice. A. Methyl chloride which is used in the manufacture of green and violet aniline colors, was employed for this purpose some years
since by Raoul Pictet, and lately Mr. Camille Vincent, of Paris, has used it to produce very low temperature. If compressed methyl chloride is liberated from this over fall to $-8^{\circ}$ Fah. This boiling will then stop, and the fluid methyl chloride will remain quiet without evaporating any further. By means of an air pump the temperature can be reduced to $-67^{\circ}$. The small machine that Mr. copper vessel, between which two walls the methyl chloride enters atA. The space, M, contains some non-
congealable liquid-alcohol, for instance. The space, E , is filled with some non-conductorof heat, as mineral

thinned somewhat with boiled oil and turpentine. When this has thoroughly dried wash off the surplus gold with
water and a piece of cotton wool. Silvering may be water and a piece of cotton wool. Silvering may be
done with the leaf, but it is better to use a dry amalgam. See p. 315, Spon's Workshop Receipts.
(6) J. D. M. asks how sperm oil can be diested of its gum and prepared for use on the sewing oil to remain in contact with a quantity of lead turnings or clippings for several weeks (usually six weeks is required), then decant and strain through linen or a sand
filter. See p. 1670 , No. 105, Scientipic American Supfliter. See
(7) F. C. E. asks (1) how to bore a $3 \times 4$ nch cylinder for steam engine. A. You can bore it in an ordinary slide lathe, with boring bar and cutter. 2.
How to make a permanent deposit of bright silver in How to make a permanent deposit of bright silver in
desired places which cannot be reached by the hand, on desired places which cannot be reached by the hand, on
the inner surface of bottles. A. Silver nitrate, 1 ounce; distilled water, 1 pint; strong aqua ammonia, $q$. $s$, dded gradually to first precipitate, and then redissolve ottles, etc honey, 34 ounce. Pour this soli for 10 to 30 minutes, or until properly coated. See article "Silvering Glass," No. 105, Scientific American Supplement. 3. Do most scientists of the present day, who have
looked into the subject, believein phrenology? A. No. (8) S. E. writes: 1. I wish to turn a block, omposed of a number of different kinds of wood; what is best to glue them with? I also wish to glue very
thinstrips of wood to linen; what is the bestglue for the instrips of wood to linen; what is the best glue for the purpose? A A fine animal glue is as good as anything for these purposes. 2. Where can I get an automatic
tide register, and about what would one cost? A. In. sert an advertisement in "Business and Personal" column. 3. How many people have obtamed American patents? A. See the numbers in patent list on another (9) H. L. B. asks. What size of steam pump would be required to force water through a 3 inch
main a distance of 3,000 feet, with 50 feet elevation at end? A. You can use any size of pump you please;
it must be determined by the quantity of water you wish tolift in a given time
(10) H. M H asks: 1 What pressure of steam will a boiler stand made like the one described
in SUPPLEMENT, No 182, page 2891? A. If well put to gether, 150 lbs . per square inch. 2. Where should the lower flasks
(11) W. M. asks: 1 . Will a boiler of 20 inches diameter, 20 inches high, $1 / 4$ inch iron, hold 350
lb. of steam to the square inch? A . Make it at least $5-16$ inch thick. 2. How thick should the cylinder be, per minute, boiler pressure $300 \mathrm{lb} . ?$ A. $1 / 2$ inch when per minut
finished.
(12) C. J. B. asks: What is the greatest depth in which any submarine diver has successfully operated?
Lake Erie.
(13) W. G. R. asks (1) how to make a preparation to dip packages in to give them a coating that
will keep them waterproof and airtight, packages covered with brown paper. A. You may try the following: Shellac, 4 parts; borax, 1 part;' water, $q$. s., to form on
boiling a very thin sirup. If required to dry very quickly, use hot. Or use a solution of shellac in wood
naphtha containing a small quantity of boiled oil. naphtha containing a small quantity of boiled oil.
2. What will make a good cheap washing crystal? How is bluing put in washing crystal, and what kind of blue is used. A. "Washing crystal" is common commer-
cial carbonate of soda, subcarbonate of soda. The cial carbonate of soda, subcarbonate of soda. The
bluing is either ultramarime or amilime blue (BB), added during the crystallization. 3. Can you get me a compound analyzed of a vegetable kind and tell me what it contains, and what would be your charge? A. Yes; the cost depends upon the nature of the compound.
(14) W. S. J. asks: 1. Which is the best deep sea sounding apparatus in nse? A. That used by the United States Coast Survey. 2. What are its de-
fects? A. This is probably as near perfect as any in use.
(15) W. asks: What acid can be used (if any) in making a monogram type upon copper, to eat in relief, and the surface smooth? Please describe the process or give some other good method. A. Use
nitric acid diluted with about 3 volumes of water. nitric acid diluted with about 3 volumes of water.
Cover the portions to remain untouched with paraffine. Cover the portions to remain untouched with paraffine.
The sand blast may be advantageously nsed instead of The sand blast may
acid in some cases.
(16) Our correspondent C. N. writes: Is it known what is the actual difference in the amount of
fuel required to run a stationary boiler (domg substanfuel required to run a stationary boiler (domg substan-
tially the same work) in winter as agaimst the summer tially the same work) in winter as agamst the summer
season, caused by the difference in temperature alone? Perhaps some of your readers can give the amount of fuel that was required to run a boiler that was exposed to the weather, for each of the twelve months, doing comparatively the same service. The result of a twelve months' performance of a small portable engine and
boiler, used for sawing wood, would be a fair test, as boiler, used for sawing wood, would be a fair test, as
the exposure of it to atmospheric changes would be unthe exposure of it to atmospheric changes would be un-
questionable. [Perhaps some of our readers will be questionable. [Perhaps some of our readers will be
able to furmish the information desired by C.N.]
(17) F. B. asks: 1. In the dynamo-electric machine described in Supplement 161, can the cores of
the electro-magnets be cast of common cast iron, or the electro-magnets be cast of common cast iron, or
would that be too hard? A. Soft cast iron will do. 2. How long ought a bichromate battery work without attention? A. It depends on how much is required of att. Ordimarily
Hard rubber
(18) A. M. W. asks: What metallic or nonmetallic substance, heated to a red or white heat, will moved from within the flame, and which with an occasional use each day will probably sustain the injurious effects of the flame longest without requiring to be re-
placed? A. Common fire brick will probably answer placed? A. Common fire brick will probably answer your purpose best.
