ELEVATED CITY RAILROADS.

The decision of the Superior Court against the Metropolitan Elevated Railroad Company, in the recent trial case, attaches a new interest to the subject of rapid city transit. materially from the present gauges principally used, which This suit was brought by Dr. Caro, the owner of a house on were "based on long practical experience, had become thor-Fifty-third street, to recover damages sustained by the passage of the elevated road in front of his dwelling.

This street is hardly surpassed for fine residences and beauty by any in the city. The effect of the elevated road has been to reduce the market and rental value of property on its line. When the road was first constructed the best made: empirical gauges or those in which the gradations houses were rapidly emptied of their occupants, and even at a great reduction in rent were difficult to fill with tenants. The people along the line of the railway have now become more accustomed to the railway nuisance, yet nearly the same reluctance holds to renting or locating on those avenues erable extent in this country, is one of the former. The or streets where the railway exists. The injury done to property owners on such a street as the Fifty-third is no trifling consideration.

The case we have cited has been argued by eminent counsel. The former decision of the court was in favor of the gauges, that made by Brown & Sharpe, which is called the company; it claimed the right to the use of the street, even "American" gauge, is spoken of as in all respects excellent, though by a new and unusual way, as by cars propelled by steam upon an elevated road.

estate owners extend beyond the limits of the street to the gauge starts with 0.46 of an inch as No. 0000; then multiply exclusion of whatever may tend to depreciate their property each diameter by 0.890522 (or deduct 10.9478 per cent) to or render their homes unpleasant, unless properly remunera- form the next succeeding size, the numbers varying reguted. The case will doubtless pass to the Court of Appeals for final decision.

Curtis are elaborate, covering the grounds claimed by plain- mingham scale, the committee recommend the Clark gauge, tiff. in Fifty-third street, and as such is entitled to their undi- actly 20 per cent less in weight than the preceding one. By minished enjoyment and advantage. The law protects pro-this scale the diameter diminishes by 10.557 per cent for perty owners in these rights against everything that may in- each number as the sizes growsmaller, or increases by 11 803 jure their property or render their homes unpleasant. No per cent as they are enlarged; and, as with all geometrical one has a right, even on his own premises, to do aught that gauges, a person knowing the size of one number can readwould injure the property of his neighbor. The decision in ily calculate that of any other. A sufficient number of inthis case is to the effect that noxious gases, disturbing termediate sizes to fill all requirements for general use can noises, shutting out air and light, are, in point of law, real be made by using half and quarter sizes, the thickness of invasions of the owners' premises. They depreciate greatly which can be determined with precision. The committee the market and rental value of the property, and render the strongly recommend this gauge for general adoption, as, bedwelling less pleasant as a home.

shall fully remunerate the property holders along the line of except in the lowest and highest numbers. It is as follows, the road, the final expense must fully equal, if not exceed, the sizes being given in decimals of an inch: the original estimate of the underground line.

The recent decision has affected the price of the company's stock, and should the Court of Appeals render an adverse decision, it can but affect still more the company and the market value of the property of the elevated railroad.

THE WIRE GAUGE.

The want of a uniform and generally accepted system of numbering and grading the different thicknesses of wire and sheet metal has for a long time been felt as a serious inconvenience, both by manufacturers and consumers. For particular purposes, or in filling large orders, where it is worth while to figure for the size of wire to a very small fraction, it is not unusual to have it drawn to a size designated by so many thousand ths of an inch, but dealers are required to keep a certain stock of standard sizes, and it is for the interest of manufacturers to have a uniformity of usage as to what shall be meant when a certain size of wire or thickness of plate are called for. We have not, in this country, had so much confusion, from the use of different gauges, as has been experienced in England, where, under what is known ent sizes of wire, from those about half an inch in diameter | properly graded sizes. down to the finest wires drawn. There is a pretty close agree ment between several of these gauges for most of the numbers, but no one is acknowledged as a standard, and, unless the actual size as well as the number is given when ordering wire, mistakes and misunderstandings frequently occur. What the manufacturer may furnish as one number the dealer may, by using another scale, sell as quite a different size, and, in times of active competition, the opportunities to do this are frequent.

The present system of designating the sizes of wire by the development of the manufacture. What is known as unexpected.

It was shown that there was an urgent necessity for some standard, and that the gauge, to be adopted should not vary oughly rooted in technical language, and were well adapted to the practical requirements of trade." All of the principal gauges were referred to, and tables given showing the sizes, with percentage of reduction in weight and differences in size for the various numbers. Two general classes were between the respective sizes were formed by arbitrary differences; and geometrical gauges, in which the various sizes were fixed by perfectly uniform decrements of weight from size to size. The "Stubs" gauge, which is used to a considcommittee say that, though very irregular in many of its gradations, it has been distributed in large quantities throughout the world, and "may perhaps be considered the most authoritative gauge in common use." Of the geometrical except that the greatest inconvenience would arise from its introduction, because the sizes are so much smaller than The Superior Court has decided that the rights of real those of the Birmingham gauge. The Brown & Sharpe larly in size and weight, and, of course, in electrical conductivity. As being preferable to this gauge, however, because The concurring opinions of Judge Speir and Chief-Justice the sizes more nearly approach those of the ordinary Bir-They set forth that plaintiff is owner of the premises in which the intervals are so arranged that each size is exside, giving all the advantages of a geometrical scale, all the Should the Court of Appeals decide that the company principal sizes in use conform very closely to its gradations,

Although we have not experienced the trouble from the use of a multiplicity of gauges which has been felt by foreign manufacturers, there can be no doubt that, if we are ever to have any export trade in manufactures of metal goods, the general adoption of some geometrical standard, which would be known and acknowledged in all parts of the world, would be of great advantage. We have such a standard for American use in the gauge now largely used here, but with this is used also the "Stubs" gauge, and what is called "the old English;" and, between them all, mechanics and engineers are constantly giving orders for specific sizes, meaas the "Birmingham wire gauge," more than a dozen differ. suring by the thousandth part of an inch, as they would not ent scales of numbers are used to arbitrarily designate differ. feel called upon to do if there was a recognized standard of

THE FRACTURE OF THE DUILIO'S 100-TON GUN.

Following hard upon the bursting of the Thunderer's 38ton gun and the experimental destruction of its companion to discover the secret of that disaster, there comes a still more remarkable failure of one of the largest guns ever constructed. During a series of experiments with the 100-ton Armstrong guns of the Italian ironclad Duilio, March 6, to test, not the guns, for they were considered as beyond suspicion, but the smooth working of the accessory machinery, numbers has grown up with and been modified according to one of the guns gave way in a manner altogether novel and

Clubs.-One extra copy of THE SCIENTIFIC AMERICAN will be supplied gratis for every club of five subscribers at \$3.20 each; additional copies at same proportionate rate. Postage prepaid. Remit by postal order. Address

MUNN & CO., 37 Park Row, New York.

To Advertisers.-The regular circulation of the SCIENTIFIC AMERICAN is now Fifty Thousand Copies weekly. For 1880 the publishers anticipate a still larger circulation.

The Scientific American Supplement

Into Scientific American Supplement is said adapted to the Scientific American Supplement is issued weekly. Every number contains 16 octavo pages, uniform in size with Scientific American. Terms of subscription for SUPPLEMENT, 50.00 a year, postage paid, to subscribers. Single copies, 10 cents. Sold by all news dealers throughout the country. Combined Rates. -- The Scientific American and SUPPLEMENT will be sent for one year, postage free, on receipt of source dollars. Both papers to one address or different addresses, as desired. The safest way to remit is by draft, postaj order, or registered letter. Address MUNN & CO., 37 Park Row, N. Y.

Scientific American Export Edition.

SCIENTIFIC AMERICAN EXPORT Edition. The SCIENTIFIC AMERICAN EXPORT Edition is a large and splendid peri-odical, issued once a month. Each number contains about one hundred large quarto pages, profusely litustrated, embracing: (1.) Most of the plates and pages of the four preceding weekly issues of the SCIENTIFIC AMERICAN, with its splendid engravings and valuable information; (2.) Commercial, trade, and manufacturing announcements of leading houses. Terms for Export Edition, 3:00 a year, sent prepaid to any part of the world. Single copies SCients. IP Manufacturers and others who desire to secure foreign trade may have large, and haddsomely displayed an-nouncements published in this edition at a very moderate cost. The SUENTIFIC AMERICAN EXport Editon has a large guaranteed circu-lation in all commercial places throughout the world. Address MUNN & CO., 57 Park itow, New York.
