Scientific American.

Scientific American.

ESTABLISHED 1845.

MUNN & CO., Editors and Proprietors.

PUBLISHED WEEKLY AT

NO. 37 PARK ROW, NEW YORK.

O. D. MUNN. A. E. BEACH.

TERMS FOR THE SCIENTIFIC AMERICAN.

One copy, one year postage included..... One copy, six months, postage included \$3 20 1 60 One copy, one year provide a second s

To Advertisers.—The regular circulation of the SCIENTFIC AMERICAN is now Fifty Thousand Copies weekly. For 1880 the publishers anticipate a still larger circulation.

The Scientific American Supplement

Is a distinct paper from the SCIENTIFIC AMERICAN. THE SUPPLEMENT is issued weekiy. Every number contains 16 octavo pages, uniform insize, with SCIENTIFIC AMERICAN. Terms of subscription for SUPPLEMENT, \$500 s year, pustage paid, to subscribers. Single copies, 19 cents. Sold by all news dealers throughout the country. **Combined Rates.** — The SCIENTIFIC AMERICAN and SUPPLEMENT will be sent for one year, postage tree, on receipt of seven addars. Both papers to one address or different addresses, as desired. The safest way to remit is by draft, postal order, or registered letter. Address MUNN & C●., 37 Park Row, N Y.

Scientific American Export Edition,

Scientific American Export Edition. The SciENTIFIC AMERICAN EXport Edition is a large and splendid peri-odical, issued once a month. Each number contains about one hundred large quarto pages, profusely illustrated, embracing: (1, Most of the plates and pages of the four preceding weekly issues of the SCIENTIFIC AMERICAN, with its splendid engravings and valuable information; (2, Commercial, trade, and manufacturing announcements of leading houses; Terms for Export Edition, \$3.00 a year, sent prepaid to any part of the world. Single copies 50 cents. (37 Manufacturers and others who desire to secure foreign trade may have large, and handsomely displayed an-nouncements published in this edition at a very moderate cost. The SCIENTIFIC AMERICAN EXport Edition has a large guaranteed circu-pation in all counterial places throughout the world. Address MUNN & UO, 37 lark llow, New York.

the current literature of the last twenty-five or thirty years, is the discovery that many other substances are sensitive to most of it coming within the published proceedings of the light. He has found this property in gold, silver, platinum, American Pharmaceutical Association. Previous to 1848 iron, steel, brass, copper, zinc, lead, antimony, German sillarge importations of adulterated and inferior drugs were ver, Jenkins' metal, Babbitt's metal, ivory, celluloid, gutta thrown on our market, but in that year Congress passed a percha, hard rubber, soft vulcanized rubber, paper, parchlaw to regulate such importations, and designed to exclude ment, wood, mica, and silvered glass. The only substances inferior and adulterated drugs. Under this law the "special found insensible to light are carbon and thin microscopic

AN ASTRONOMICAL DISCOVERY.

4 **4** 4 4

Professor E. C. Pickering, director of the Harvard Observatory, lately made a discovery which is regarded as one of the most important of the century in stellar physics. In the ordinary telescope a star appears as a point of light, brighter, but not larger than when looked at with the naked eye. Prof. Pickering finds that, on placing a prism between the object glass and the eyepiece of his telescope, the light years. The record of drugs rejected is not now kept, but of a star is drawn out into a continuous band. When, howthe same law is in force, although it is complained that it is not as effective as it should be, because the examiners are nebula, the light is collected into a star-like point without any band, enabling the astronomer to distinguish instantly between a star and a planetary nebula. This principle has already enabled Prof. Pickering to discover several planetary nebulæ. On Thursday evening, August 26, an object was observed which presented the appearance of two starlike points within the band in the modified telescope. It is different from anything heretofore observed in the telescope, and is regarded as an important object for investigation.

not always appointed solely with reference to their fitness for the office.

The National Board of Health have no remedy to recommend for the present state of things, but from the printing of their report, and the diffusion of such information as is here presented, much good may ultimately result. The National Government can exercise more care, or make more stringent regulations if that be necessary, to prevent importations of inferior or adulterated drugs, but what seems even more necessary than this is uniform action by the various State Legislatures to more effectually control the manufacture and the dealings in a class of goods where the detection of inferiority or deleterious adulterations are generally so difficult, and where any fraud is likely to have a direct effect on the health of the community.

THE PHOTOPHONE.

In May, 1878, Mr. Alexander Graham Bell, well known in time there was danger of a gigantic conflagration, as there connection with the telephone, announced before a scientific were some twenty large tanks not far from the burning tank society in London his belief that it would be possible to hear of the Pipe Company. By firing cannon shot into the tank a shadow by interrupting the action of light upon sele, its contents were run out and the adjacent property saved.

HOW ARE THE OIL TANKS SET ON FIRE BY THE LIGHTNING ?

Again we have to record the destructive effects of lightning in the Bradford, Pa., oil regions. On the 28th of August, at 8:30 P.M., one of the 25,000 barrel oil tanks of the United Pipe Line Company, near State Line and Tarport, was set on fire by electricity and burned; also four smaller tanks on the West Branch near Bradford. At one
