kept at 79 Liberty St., N. Y. Wm. Sellers & Co. The best Truss ever used. Send for descriptive circular to N. Y. Elastic Truss Co., 683 Broadway, New York.

Comb'd Punch & Shears; Universal Lathe Chucks, Lambertville Iron Works, Lambertville, N. J. See ad. p. 78. Wheels and Pinions, heavy and light, remarkably

strong and durable. Especially suited for sugar mills and similar work. Circulars on application. Pittsburg Steel Casting Company, Pittsburg, Pa New Economizer Portable Engine. See illus. adv. p. 109.

Blake's Belt Studs. The best and cheapest fastening for rubber and leather belts. Greene, Tweed & Co., N.Y. Wm. Sellers & Co., Phila., have introduced a new

injector, worked by a single motion of a lever. Ore Breaker, Crusher, and Pulverizer. Smaller sizes run by horse power. See p. 109. Totten & Co., Pittsburg.

#### HINTS TO CORRESPONDENTS.

No attention will be paid to communications unless accompanied with the full name and address of the writer.

Names and addresses of correspondents will not be given to inquirers.

We renew our request that correspondents, in referring Corrugated Wrought Iron for Tires on Traction En- to former answers or articles, will be kind enough to gines, etc. Sole m'f'rs, H. Lloyd, Son & Co., Pittsb'g, Pa. | name the date of the paper and the page, or the number of the question.

Correspondents whose inquiries do not appear after reasonable time should repeat them. If not then pub- ' in it. lished, they may conclude that, for good reasons, the Editor declines them.

 $Persons \ desiring \ special information \ which \ is \ purely$ duplex interchangeable point section, is the very latest of a personal character, and not of general interest, jewelry? Of what does it consist, and what was its should remit from \$1 to \$5, according to the subject, as we cannot be expected to spend time and labor to

obtain such information without remuneration. Any numbers of the SCIENTIFIC AMERICAN SUPPLE-

MENT referred to in these columns may be had at this office. Price 10 cents each.

tight. Ithought of two ways: 1. To cover the outside with 1/8 inch boards and fasten with copper rivets; or 2. To cover with canvas, using some cement or glue. Which do you think is best, or do you know of a better method? I have tried calking, but it does no good. A. Use canvas, well painted.

stroke and diameter of cylinder will be necessary to run Englishmen, who to counterbalance the depreciation at a fair sp at 18 feetlong by 5 in still water? A. 3 inch cylinder by 4 inches stroke. 2. Where can I obtain rough castings for above engine? A. We do not know of any one having them in stock. 3. Can I use lap welded boiler tube for boiler? also. what diameter and length and number of flues? A. Yes; you should have 70 to 75 feet fire surface. 4. Which will be best, paddle wheels or screw? A. Screw.

(6) G. T. C. writes: We are using a solution here which has to be raised to a height of 20 feet, and it is almost impossible to get any kind of a pump to stand it, not even a rubber one Is a little heavier than water. Would it be possible to make a wooden tank strong enough to raise the solution by air pressure? If it would, about what thickness o \* material would be required? Could we use an air blower, or would it require an air pump to get the required pressure? A. A cen-For Mill Mach'y & Mill Furnishing, see illus. adv p.93. | trifugal pump of either iron or brass might suit your Mineral Lands Prospected, Artesian Wells Bored, by purpose, unless the material you pump will attack the metal. It would be possible to construct a wood ves-Rollston: Mac. Co.' Wood Working Mach'y ad. p 93. | sel and use compressed air. You would require an air compressing pump a blower would not do. Could

(7) A. K. D. asks: Will a brick smokestack 55 feet high be sufficient height for a sixty horse steam boiler to produce the best results in raising steam and what size hole should there be in the stack, and should it be smaller at the top than bottom? A. Make your chimney not less than 60 feet high and flue 28 inches or 30 inchessquare, and parallel the whole height.

(8) H. B. asks: 1. What size flywheel should I use for engine with 6 inch cylinder by 21/2 diameter? A. 16to18 inches. 2. Can you give me any information on melting zinc? I have melted some, but Air Compressors. Clayton Stm. PumpW'ks,Bk'lyn, N.Y. | it will not run solid. Is there any mixture I could put with it to make it run solid, and would it do for steam engine cylinder of the size above mentioned? A. You had better use block tin or brass for your cylinder. 3. Would block iron 1/8 inch in thickness be strong enough to make boiler for cylinder mentioned, boiler to be 3 feet high and 1 foot 6 inches diameter. Would boiler be large enough? A. Would recommend three-sixteenths inch thick. Make boiler at least 20 inches fications not being printed, must be copied by hand. diameter and 4 feet high.

> (9) S. S. J. writes: In fitting key to crosshead and piston rod with usual taper, should it bear equally on each side, or should some be cut away to give draught? A. The sides of key should be parallel and a good easy fit. The draught to be on the edges and keyways cut away so that the rod will draw home.

(10) D. D. H. asks for the best method of putting in a non-conductor of heat between an iron roof and wooden ceiling. Will building paper answer the purpose? if so, how should it be used? A. The best method would be to give free circulation to the air between the roof and ceiling, then the heat from the roof would be carried away by the air.

(11) A. J. S. asks: Is there any way to keep the bright work, "hot bright work," such as ends and valve box of the Corliss engine, clean? A. A mixture of white lead and tallow, put on with a brush will keep the surfaces from rusting, but the cleaning must be done by hand.

(12) J. J. S. asks for some information relative to the source and method of preparation, etc., of what is known as a " snood," an article used by fishermen for attaching hooks to fishing lines. A. It is silk worm gut. The best comes from Spain. We believe it to be the contents of the silkworm's sac drawn out in bulk just as it is ready to spin its cocoon.

(13) D. H. F. asks: 1. What is the best material to make buttons of to prevent rusting on an electric switch that must necessarily be exposed to the weather? A. Copper. 2. Suppose I use a double electro-magnet with a permanently magnetized armature; the armature is attracted when the current passes. Reverse the current, thereby reversing the poles, will the armature be repulsed, and with what proportionate force? A. It will be repelled; the force will depend on the size of the armature and the amount of magnetism

(14) F. D. H. asks: What is the "hall mark," spoken of in connection with London plate and origin? A. Hall mark—the official stamp of the British Goldsmiths' Company and other authorized assay offices on gold and silver articles to guarantee their purity. The standard silver of England is an alloy, containing, in 1,000 parts, 925 parts silverand 75 copper Originally the Goldsmiths' Company had a monopoly of (1) S. E. S. writes: I have a rowboat authorized to search the shops of silversmiths and seize A charge of 1s. 6d. an ounce is made for assaying and stamping, the larger portion of the revenue so derived Churn dasher, S. J. Linn ..... being paid over to the government.

(15) J. H. T. writes: In SUPPLEMENT No. 225, p. 3589, under "Farming in Southwestern Min-230, p. 366, under finding and the set of th (2) A. F. N. asks: 1. What length of States lands are frequently pointed out as belonging to unfortunately goingon in land property in England, are investing in desirable estates in America." Can this be true? I have always been under the impression that aliens could not hold real property in this country. Am I wrong in my impression? A. You are wrong. Different States have different laws on this point. 2. In both the SCIENTIFIC AMERICAN and SUPPLEMENT receipts frequently appear in which it is stated that so many parts of a solid and so many parts of a liquid are to be taken. By parts is it always meant parts by weight of both solid and liquid? If not, how then are such formulas to be interpreted? A. Parts by weight are intended unless otherwise specified. Fluids may often be more conveniently measured-taking the fluid ounce or liter and pure water as the standard. Their specific gravity must, however, be taken into consideration-sulphuric (4) W. S. F. asks: Will an ordinary two acid, for instance, is nearly twice as heavy as water (1.8). 3. Is it possible for a man engaged in active business, cabinet of minerals in this city or vicinity? A. Visit "School of Mines," Columbia College, or Metropolitan Museum of Natural History, Manhattan Square, near Central Park, west side.

have had quite a discussion on the question whether it takes more power to stop a fly wheel than it does to start it. Suppose an engine of certain power could get the speed of a fly wheel up in a minute, which is 300 revolutions, if the same, applied in the opposite direction, could it stop it in the same time? A. It would be stopped in less time. In starting you have the friction operating against the power,and in stopping the friction aids you.

#### INDEX OF INVENTIONS FOR WHICH

Letters Patent of the United States were Granted in the Week Ending

### July 20, 1880,

AND EACH BEARING THAT DATE, [Those marked (r) are reissued patents.]

A printed copy of the specification and drawing of any patent in the annexed list, also of any patent issued since 1866, will be furnished from this office for one dollar. In ordering please state the number and date of the patent desired and remit to Munn & Co., 37 Park Row, New York city. We also furnish copies of patents granted prior to 1866; but at increased cost, as the speci-

iteations not being printed must be copied by name.
Air, method of and apparatus for heating, con-
ducting, and utilizing, Chaffee & Priest
Alumina or alum, making and purifying sulphate
of, W. Chadwick et al 230,106
Ammonia, manufacture of aqua, J. L. Marsh 230,303
