Grape sugar or glucose can be made to substitute part of Lager beer is usually stored from four to six months:

2. "Schenk," winter, or present use beer:

Water	1 barrel.
Malt	2 to 3 bushels.
Норе	1 lb.
Yeast	About 1 pint.

It is ready for use in from four to six weeks.

quantities and served to customers in the spring, during the capital thing for a lawn. It is odorless, clean, and gives a interval between the giving out of the schenk beer and the rich green color to the grass. tapping of the lager. In its preparation are used:

Water	1 barrel.
Malt	
Hops	
Veget	About 2 pin

Bock beer requires about two months in its preparation. Starch, grape sugar or glucose, glycerine, and molasses are not unfrequently introduced into beers to replace part of the malt, while pine bark, quassia, walnut leaf, wormwood, bitter cloves, aloes, etc., are sometimes used to neutralize acidity or conceal dilution.

The color of the beer depends much upon the care with which the malt is handled and the temperature with which it is kiln dried. 90° to 100° Fah. produces pale malt; 120° to 125°, amber malt. At temperatures above this the malt sun. becomes brown, and the wort produced from it has a similar color. The malt should be dried so that every part of it becomes crisp.

#### TO MAKE AND MAINTAIN A LAWN.

skies. To secure it requires considerable pains at the outset, amply rewarded for his labor and trouble.

the very basis of success. If there be a good natural clay Canada to Tennessee. At no time since the trade was subsoil, with a covering of loam, this part of the work will prove comparatively easy; but if, as is often the case in in the Pennsylvania coke regions as at present, hence an outnewly improved grounds, there is only the bare clay to begin line of the nature and peculiarities of the industry is not out by two and a half inches wide, and having an inclination of with, or if the subsoil be a leachy gravel, the task of preliminary preparation is not light.

### A NEW AMERICAN GEM.

At the last meeting of the New York Academy of Sciunlike in their industrial characteristics, and which at the ences, Mr. G. F. Kunz read a short paper upon the new same time cannot find duplication in the world. The oil region mineral "hiddenite," discovered not long ago in North Carolina by Mr. Wm. E. Hidden, mineralogist. The mineral constitutes a new gem, of the emerald class, and is known in the trade as lithia-emerald, owing to the presence of lithia as one of its chemical constituents. We have seen some specimens of this gem, and they are indeed most beautiful objects to the eye. The stone has a pure delightful The preparation of the soil must be thorough, as it is the east to Omaha and St. Louis on the west, and from green tint with a liquid brilliancy that is quite distinctive and remarkable. It sells for about the same price as the diafounded, some twenty years ago, has there been such activity mond. Mr. Hidden tells us that the mineral is found in a almost seven degrees. We give a report of Mr. Kunz's paper in another column, and in our next Supplement we J. Lawrence Smith.

# A Reporting Machine.

An interesting trial of a stenographic machine was made in the Chamber of Deputies, Paris, February 18, in the presence of M. Gambetta and a number of other officials and members. The mechanism, which is an Italian invention, is worked by a kind of key board similar to that of a small piano, and the stenographic signs, not unlike those used in the ordinary French short-hand, are automatically printed on a continuous ribbon of paper. The signs registered, of course, represent sounds, irrespective of spelling, and the machine can be used by a person unacquainted with the language spoken. The daughter of the inventor worked the machine successfully, taking down a speech read, at average speed, in Italian, and one read in French by M. Gambetta, she being ignorant of the latter language. A comparison between the speed of the machine and that of the short-hand writers of the Chamber proved favorable to the former. Further experiments will be made with a view to a possible adoption of the apparatus, which is already in use in the Italian Chambers.

# The Arlberg Tunnel.

The preparatory operations having been finished, the work or by harrowing and cross-harrowing if large, and after value of the article at the ovens is at present \$1.75 per ton, of boring the great tunnel through the Arlberg has now showing the year's output to be worth five and a quarter actually commenced. This tunnel will be one of the longest Gravelly leachy soils are the worst for lawn purposes. It million dollars. Each oven represents an investment in in the world, though not so long as that of St. Gothard. So will be cheaper in the end to cart clay upon the gravel to lands, machinery, horses, cars, etc., the sum of \$800, and far the operations on the eastern side af the Arlberg have make an impervious stratum, when clay can be cheaply ob- the value of the best coke-coal lands is from \$300 to \$500 per progressed very favorably.
