RESIGNATION OF THE COMMISSIONER OF PATENTS.

In the resignation of the Commissioner of Patents, Mr. Dr. Payne divides smallpox into confluent, semi-confluent, teenths to nine-sixteenths of an inch thick. Rivet holes are Edgar M. Marble, the service loses an officer that can ill be spared.

> Under his administration the business of the office has been conducted with commendable promptness and impartiality, and much has been done to increase the efficiency of the service and its value to inventors and patentees.

> It is a pity that the government will not deal more liberally, not to say justly, with the Patent Office, and through it with inventors and the public at large. While the office is much more than self-sustaining, indeed is annually turning over a large sum to the treasury, it cannot for any length of time command, for it is not allowed to adequately pay for, the service of men who, like Mr. Marble, have exhibited unusual executive ability.

> As a consequence the office now loses a chief whose temper and capacity and exceptional knowledge of patent law, not less than his hearty sympathy with the spirit and purpose of the patent system, have proved him to be the proper man for the place.

> It is not easy to find men so well fitted for the severe, complicated, and, at the same time, delicate duties of the Commissionership of Patents. For such service, more especially in an office with large surplus revenue, the government ought to be willing to pay as liberally as business corporations can, and give as ample a guarantee of permanence in the employment. We understand that Mr. Marble has accepted more lucrative employment as Land Commissioner

Steamboat Inspection

The annual report of the Supervising Inspector-General vessels amounts to about \$7.50 per capita, which appears to be largely in excess of the needs of the inspection bureau. it can be shown that the dome actually strengthens the seam, This year alone the surplus is nearly \$\$9,000, while the Another case described by Dr. Payne occurred in January, which is probably the notion that induces this practice, it accumulated surplus now lying idle in the Treasury amounts to a total of about \$650,000, which Gen. Dumont thinks would suffice for the expenses of his department for a term
