Scientific American.

ESTABLISHED 1845.

MUNN & CO., Editors and Proprietors. PUBLISHED WEEKLY AT

No. 261 BROADWAY, NEW YORK.

O. D. MUNN.

A. E. BEACH.

TERMS FOR THE SCIENTIFIC AMERICAN.

One copy, six months postage included Clubs.—One extra copy of The Scientific American will be supplied gratis for every crub of five subscribers at \$3.20 each: additional copies at same proportionate rate. Postage prepaid.

Remit by postal order. Address MUNN & CO., 261 Broadway, corner of Warren street, New York.

The Scientific American Supplement

is a distinct paper from the SCIENTIFIC AMERICAN. THE SUPPLEMENT is issued weekly. Every number contains 16 octavo pages, uniform in size with Scientific American. Terms of subscription for Supplication, $\$5.00\,a$ year, postage paid, to subscribers $\,$ Single copies, 19 cents. Sold by all news dealers throughout the country

Combined Rates. - The SCIENTIFIC AMERICAN and SUPPLEMENT will be sent for one year postage free on receipt of seven dollars. Both papers to one address or different addresses as desired.

The sufest way to remit is by draft, postal order, or registered letter.
Address MUNN & CO., 261 Broadway, corner of Warren street, New York

Scientific American Export Edition.

The SCIENTIFIC AMERICAN Export Edition is a large and splendid periodical, issued once a month. Each number contains about one hundred large quarto pages, profusely illustrated, embracing: (1.) Most of the plates and pages of the four preceding weekly is ness of the SCHENTIFIC AMERICAN, with its splendid engravings and value bie information: (2.) Commercial, trade, and manufacturing suncouncements of leading houses. Terms for Export Edition, \$5.00 a year, sent prepaid to any part of the world. Single copies 50 cents. ** Manufacturers and others who desire to secure foreign trade may have large, and handsomely displayed announcements published in this edition at a very moderate cost.

The SCIENTIFIC AMELICAN Export Edition has a large guaranteed circu-

lation in all commercial places throughout the world. Address MUNN & CO., 261 Broadway, corner of Warren street, New York.

NEW YORK, SATURDAY, DECEMBER 9, 1882.

TABLE OF CONTENTS OF

THE SCIENTIFIC AMERICAN SUPPLEMENT

No. 362,

For the Week ending December 9, 1882.

Price 10 cents. For sale by all newsdealers,

I. ENGINEERING AND MECHANICS—Recent Improvements in Textile Machinery.—Harris's revolving ring spinning frame.—New electric stop motion.—New positive motion loom.—5 figures... 5768
Spinning Without a Mule.—Harris's improvements in ring spinning 5763
New Binding Machines —3 figures ... 5771
Flumes and their construction.—1 figure ... 5771
(hwab's Rolling Mill for Dressing and Rounding Bar Iron.—9 figures ... 5772

III. HYGIENE. MEDICINE, ETC.-The Air in Relation to Health.

IV. ELECTRICITY. ETC.—Gustave Trouvé and his Electrical Inventions.—Portrait of Gustave Trouvé.—Trouvé's electric boat competing in the regatta at Troyes

Domestic Electricity.—Loiseau's electric naphtha and gas lighters.—Ranque's new form of lighter with extinguisher.——5775

Thei'er's Telephone Receiver.—2 figures.—5775

An Electric Power Hummer. By MARGEL DEPRETZ.—1 figure.—5776

Solignac's New Electric Lamp.—2 figures.—5776

Mondos's Electric Lamp.—2 figures.—5776

YORK CITY.

of our city has made rapid progress the past summer and cellent work from it is expected. the reckless extent of doubling the lines of pipes in many | culture. streets, to the detriment of all other franchises and interests without giving satisfaction to the takers of steam.

Although there may be competition wherever there are rival lines, as well as the cutting of rates, the gain is not Boston, December 12. Its purpose is the formation of an equal to the nuisance of the continued disturbance of the streets and increased temperature of the water supply from the proximity of so many steam pipes.

steam companies in our great city without doubling up their lines of steam pipes under our streets to the detriment of all other interests?

The blockade of the streets alone by one company is a nuisance, and what must it be when the rival company repeats it; but when packings blow out to such an extent as to fill the streets with steam and jeopardize life, it becomes time to suspend the extension of the lines, and endeavor to perfect the work already done.

The general plans of distribution of the two steam companies are nearly the same, but the details of the laying of the street mains vary somewhat. The flange packings of the New York Company are corrugated copper gaskets or tried, but the paper gaskets upon the valve bonnets have been the cause of several blowouts. The expansion inner edge to the end of a line of pipe, and by their outer edge to a short flanged cast iron cylinder, making a flexible joint upon the same principle as has been so long in use upon the main steam pipes of our large steamers; the same arrangement in principle being also in use for accommodating the unequal expansion in the steam and exhaust connections of large cylinders.

This class of expansion joints have had a long trial, and found faultless for small variations, but having so little range they are hardly a criterion by which to judge of the success of the copper ones, which are subjected to much strain and flexure. The line-pipe is felted or covered by a thickness of transatlantic friends, at least under present circumstances. about two inches with mineral wool, the whole being inclosed in a case of wood, made by boring out large logs and splitting for the convenience of inclosing the pipe and inserting the the producer only half as much as Russian grain. felting; the whole being made as nearly impervious to water from the outside as possible by asphalt felting.

The flange packings of the American Co., as we hear, were at first made with gaskets of compounds of rubber, plumbago, and other materials, a variety of which are made under various patents. They are too plastic, and are liable or vulcanized, and therefore require setting up by the screws few hours' testing with an inadequate supply of steam upon but we fear that it is too frail a fabric to stand the continued tors for the export grain trade of the world. pressure and the flexure from large and rigid pipes.

with coal tar, the top and bottom of the box being laid crosswise and filled in with pulverized charcoal.

brass or composition, with brass bearings. They have a the activity of our inventors and manufacturers. The congreat range, and therefore require a less number in a given current testimony of all our inventors and manufacturers is distance than those of the other company, but the packings require frequent attention.

The regulations, capabilities, and extent of steam supply by these companies, will be considered in a future article.

GENERAL AND LOCAL WEATHER SERVICE.

value of the services rendered by the volunteer observers in which make it most effective in stimulating invention. the seventy-six counties of the State.

Lieutenant Dunwoody, First Assistant in the Chief Signal Office in Washington, who was presented to those intending defendable and therefore valuable—the enormous and cheap to engage in the work, said that State weather services were organized during the past year in Ohio, Indiana, Illinois, Michigan, Kansas, Nebraska, Missouri, and New Jersey. because patentable, protectable, and profitable—the grain, if The most perfect State service is that in Iowa, which was produced, would have to rot in the bins or be burned for the first organized, and is operated under a State law. The fuel, for it would not pay for hauling half across the conti-5776 object of the State service is to observe and utilize every nent. Without the enormous home market for ninety-nine feature of the weather that affects the prosperity of the in-hundredths of our grain production-due mainly to the mul habitants of the State as to crops, health, life, etc. It is tiplication of non-producing consumers employed in purely essentially a plan for gathering and utilizing local climatic mechanical pursuits which have their basis in the patent sysdata, and eventually it will define precisely the localities tem—the surplus of agricultural products beyond what could most favorable or unfavorable to special crops, diseases, and be exported would make such crops as we now raise unthe like. The chief of the service should be in such comprofitable to the growers, even at the present low cost of munication with the Signal Office at Washington that he production. would be able to receive and disseminate any information of Whatever way we may look at it, the disposition of many

fall, almost too rapid, we think, to be substantial and free. The frost warnings lately inaugurated for the benefit of from the every-day mishaps now occurring. Defective pipe the fruit, cotton, and tobacco growers have proved of great and fittings and misjudgment in the selection of material for value to agriculture, and similar warnings for other interests packing the flanges, together with insufficient testing before are soon to be inaugurated. The department at Washington the closing of the trenches, has resulted in the blowing regards the Indiana service as one of the best of these, as the out of joints, the breaking of flanges, and the digging up reports show great skill and proficiency in the work. These and blockading of the streets over and over until the patience. State services will soon prove of very great advantage in of the mercantile community is wellnigh exhausted. The making deductions and predictions regarding weather conspirit of rivalry between the companies has been carried to ditions, and will have an important influence on agri

CONVENTION OF STREET RAILWAY OFFICIALS.

A convention of street railway officials is to be held in association for the promotion of scientific and practical knowledge relating to the construction, equipment, and management of street railways; an interchange of informa-Is there not room enough for the expansion of two live tion and ideas, and the cultivation of a spirit of fraternity among those engaged in street railway enterprises.

Considering the wide extent and enormous financial importance of the street railway interests of the country, and the number of men employed, the field for such an association is manifestly a large and inviting one. Properly organized and conducted, the proposed association cannot fail to be of advantage, both to the street railway service and to the public. If, on the contrary, it is to be pervaded by a spirit of opposition to inventors and their improvements in the means and methods of the service, after the fashion set by certain other railway organizations, it had better never come into existence. From their very nature, street railways are apt to be measurably if not wholly exempt from compewashers. These have so far proved the best that have been | tition, and where serious competition is lacking, their managers are not apt to be over-eager for the adoption of improvements primarily intended for the better accommodation of joints of this company are disks of copper fastened by their the public. Closer intercourse with their more progressive associates may help to stir up the laggards to the advantage of both the companies and the traveling public.

HOW OUR FARMERS ARE HELPED BY THE PATENT SYSTEM.

There has been this fall what is called a crisis in the grain trade of Russia.

When asked the cause of it, a grain merchant of St. Petersburg replied: " The American cheap grain has completely undermined us. It is clear that we cannot compete with our Our agriculture is in a primitive state, and our transportation is in its infancy. In spite of dear labor, American grain costs

This great contrast in the relative situations of the grain merchants of Russia and America but faintly illustrates the contrast in the positions of the farmers of the two coun-

With American facilities for cheap and rapid transportation, the price of grain at the farm much more nearly approxito give way under pressure and heat before they become set; mates the seaboard price than is the case in Russia. In other words, while it does not cost the newly immigrated Russian or bolts for some time previous to closing the trenches. A farmer in the West half as much to raise a bushel of grain as it does his brother in Russia, he gets for it a far greater small sections is entirely insufficient for perfecting the joints. share of the Liverpool market price; and all other American We understand that asbestos is being tried as a packing, farmers enjoy the same advantage over their chief competi-

These advantages are in no way due, it will be observed, The line pipe of this company rides upon friction roll- to the superior skill or thrift of the farmer himself. He has ers within a box of heavy plank, which is thoroughly treated at command—thanks to the geographical position of his farm -better means for producing and handling his crops and for getting them to market. These alone give him his com-The expansion joints are of the sliding type, made of manding position; and for these he is indebted entirely to that their productive activity has been greatly stimulated and sustained, if it was not originally awakened by the inducements held out by the Patent Office in moderate fees and the protection of inventors' and manufacturers' rights which the patent laws afford.

And yet, because of minute and incidental inconveniences A convention of volunteer weather observers was held at arrising from the application of the patent laws-in many Indianapolis, Ind., November 15. Governor Porter opened cases attributable largely to contributory negligence on the the exercises with an interesting address on the Indiana, part of the sufferers—a considerable class of our Western Weather Service, tracing its history and pointing out the farmers would wipe out those features of the patent system

Without their improved machinery—which has been invented because improvements were patentable and thereby grain crops of the West could have no existence. Without our means of cheap transportation - which have been invented
