falling stars.

It is, however, unnecessary to wait for the earth's passage blaze forth suddenly in the sky, rush on their headlong; and trade of tobacco in all its forms. course, and then disappear, leaving oftentimes a train of | The revenue from tobacco in 1820 was 64,338,834 francs, light to mark their course. Instances are on record where and in 1882 it was 362,594,000 francs, or 1,000,000 francs falling stars were of such brilliancy as to be visible in the per day. This enormous sum contributes toward the budget pose is theft or fraud. The requirement of a license gives daytime even, when the sky was overcast.

A surprising number of these tiny bodies fall through the atmosphere every day. The average number of those sufficiently bright to be seen at night with the naked eye is no less than seven millions every twenty-four hours. If we include the number visible through a telescope, the average reissued March 12, 1878, No. 8,121. Judge Wheeler held the must be increased to four hundred millions. Interplanetary space swarms with meteoric matter! The work accomplished by these systems made up of innumerable atoms of cosmical dust, their origin, the part they play in the economy of the universe, and their mysterious association with comets, are questions of the deepest interest to astronomers.

OSTRICH FARMING IN THIS COUNTRY.

The ostrich farm in California is reached over a sandy fringement. road leading from Anaheim, part of the way being over the old bed of the Santa Ana River. The land on which the the rights of minors and women to receive, hold, and confarm is located comprises 640 acres of alkali soil. The same vey patents. The Judge held as follows: kind of soil is found in Africa, and it was considered no obstacle. To rid it of its alkaline properties, it was plowed yielding many thousands of gallons of water a day. The water was allowed to remain for a while, when it was drawn off, taking with it a portion of the alkali in solution. This operation was continued until the land had been washed law, sufficiently to be put under cultivation. According to the San Francisco Bulletin, this farm has yielded three crops of alfalfa, and a fourth is ready to be cut.

The twenty-one birds on the farm were brought, in a roundabout way, some 22,000 miles, part of the distance by such rights are regulated. car. When young they are kind and tractable, but after three years become vicious and deceitful. Blindfolding them -generally accomplished by pulling a stocking over their heads—takes away their pugnacity, and they will not kick, except they know what they are kicking at. The eggs are not fruitful because, the owner states, the birds are becom- assignee in an action involving their joint rights. ing acclimatized. Even if all attempts to batch the eggs should prove unsuccessful, the value of the feathers will cover the expense of tending the birds for the year.

The attempt to raise ostriches in Florida has just been commenced, three pairs of birds having been taken there.

Ostrich eggs are about six inches long by five wide, and are equal in bulk to 24 hens' eggs. The chick is hatched in 42 days, and a few days after reaches the size of a common hen. A light brown down covers it, and at the back and wings are projecting needles, similar to those of a hedgehog. At the age of one month the size of a turkey is reached, and small feathers begin to appear. At one-half this ordinance, on evidence that, without license, he traveled a year the feathers have attained a good size, but are not from door to door in said city and sold a clothes wringer. cast off until the bird becomes a yearling; young ostriches The clothes wringers were manufactured by the defendant are kept in flocks of from twelve to fifteen, and sep- at Sturgis, in this State, under letters patent of the United rate from the old ones. Generally the feathers are cut States issued to him and one Shepardson as patentees. The off only once a year, but birds which receive special attention yield two or even three crops of feathers.

The best feathers now come from North Africa, but the crop is insignificant compared with that of Cape Colony, patented articles it is an interference with the power of Con-Natal, and the Transvaal. Since 1862, ostrich farming has greatly multiplied in those countries, and it is now estimated that there are 100,000 domestic ostriches which yield? feathers worth \$4,500,000.

TOBACCO IN FRANCE

of public instruction.

DECISIONS RELATING TO PATENTS.

In the United States Circuit Court, Southern District of New York, Fetter vs. Newhall, Drive Screw, Patent 110,839; patent to be in part valid. Also that it is not necessary to fringement. The patent gives exclusive enjoyment of the whole patented invention, and taking one feature is an infringment pro tanto.

Where a defendant has repudiated a license formerly held

An interesting question came up on this trial relative to

The laws of Congress give the right to a patent to the inventor, whether sui juris or under disability, or to the asvery deep and water turned on it, a well 300 feet deep signs of the inventor. As inventor or assignee of a patented invention a married woman, an infant, or a person under guardianship obtains a vested right to the patent. Married women could always take by assignment under the common

> Section 4898 Revised Statutes requires that the assignment of a patent be by an instrument in writing. The drawing 12 inches of water with three or four persons on ability to make the instrument, however, or the aids to a disability must be found in the laws of the States, where all

The laws of New York free married women from disability to make an assignment by an instrument in writing, and make their property distinctively their own. Where a married woman by her sole deed assigns an interest in a patent the assignment is valid, and she may join with such

An interesting decision touching the right of towns and other State authorities to tax the sellers of patented goods, was given by Judge Cooley, of the Supreme Court of Michigan, in the case of the People vs. Russell.

An ordinance of the city of Coldwater provides, among other things, that "no person shall hawk or peddle any meat, goods, wares, or merchandise from door to door within the limits of the city of Coldwater, without a license from the mayor." For the license, when not for the sale of meat, fifteen dollars is required to be paid for one year, or three dollars for one day. The defendant was convicted under defendant appealed.

The Judge in delivering the opinion of the court, said:

It is objected to the ordinance that if applied to the sale of gress to grant exclusive rights to patentees to make and sell their inventions, and an encroachment upon the rights which the patent assures to the patentees. We agree that if this is the case the ordinance can have no such application. The power of Congress to grant the exclusive right to make and sell the articles which from their or iginality and value have The report of Consul B.F. Peixotto, of Lyons, France, gives been found deserving, is exclusive, and any State legislation dustry to that government. In 1560, Jean Nicot, a French privileges which the letters patent confer is an invasion of

will be set on fire by the concussion and take on the form of ing become so great, the monopolists willingly paid ings of others, and he must obey all other regulations of police which are made for general observance. (Patterson vs. From 1791 to 1798 all tax was removed. Then the plan of Kentucky, 97 U.S., 501.) Invidious regulations applicable tion of that nature here. We have no doubt that it was be taken as established by the concurring practice of civilized States. They are a class of persons who travel from place to place among strangers, and the business may easily be made a pretence or a convenience to those whose real puropportunity for inquiry into antecedents and character, and the payment of a fee affords some evidence that the business is not a mere pretence.

Judgment affirmed.

Electric Launches.

At the recent meeting of the British Association, Mr. A. take the whole of a patented invention to constitute an in-Reckenzaun read a paper "On Electric Launches." He described the boat Electricity. It has one Siemens D2 dynamo connected directly to the screw shaft, upon which is a propeller with two blades; diameter 1734 inches, pitch 11½ inches, and area of blade surface 66 square inches. by him, and is acting in defiance of the patent and outside Yarrow and Company, in conjunction with the Electrical the license, such license is no protection against suit for in- Power Storage Company, have fitted up a launch, which has been sent to the Vienna Exhibition. This is 40 feet long by 6 feet beam, and can carry forty passengers. The motor is a Siemens D2 machine, which develops 7 horse power with 80 cells, and a current of 40 amperes. The screw is twobladed of thin forged steel, with a diameter of 19 inches, and a pitch of 13 inches. The weight of the motor and batteries combined is 214 tons. During the trial the speed of the boat was over eight miles an hour, the current used at the time being 41.22 amperes, and the counter electromotive force 112.5 volts, with 60 cells in circuit.

> Mr. J. Clark, of Glasgow, described a wooden boat, clinker built, 21 feet long over all by 4 feet 4 inches beam, and board. She is fitted with an electric motor coupled direct to the propeller shaft, and her power is derived from two battery boxes 3 feet long by 8 inches wide, and 12 inches high, which can be utilized as seats. The batteries require recharging with chemicals about every four hours of continuous use, one battery driving the boat at three-quarters speed, while the other is being recharged. During several trials at Kilcreggan-on-Clyde, a speed of a little over five miles an hour was obtained, the motor running at 600 revolutions per minute. The weight of the boat complete, with batteries charged, is 4 cwt. Clark's electric launches are now being built by Messrs. Gilbert Bogle and Co., of Glasgow, of varying sizes, from 15 feet long and four miles per hour speed to 30 feet long and seven miles per hour speed. The author gave no clew as to the nature of his batteries or to the cost of working them.

> Sir William Siemens said that there were many applications in which the secondary battery would be most useful, but it was a mistake to suppose it could be employed for every purpose. For instance, it was foolish to endeavor to adopt them for driving tricycles, but in launches, where the machinery was perforce very cramped, they promised excellent results. The great question was whether the secondary battery would last or whether it would perish. In order to test this point quietly he had put down batteries in his own house last autumn, and he had found them satisfactory so far. He charged them all day, and at night he used both them and a small dynamo to feed his lamps. In the case of a launch the machine could not be taken with the boat, and consequently the navigation would be confined to short stages.

> Sir James Douglas pointed out that an electric launch was much more easily swung from the davits of a ship than a steam launch, and that it offered greater security at sea. There was no fire to be put out if two or three waves were shipped, and the machinery would work under water. There was also a saving in the number of attendants, one man only being required.

Oil for Wagon Wheels.

A practical man says: "I have a wagon of which, six years ago, the fellies shrank so that the tires became loose. I gave it a good coat of hot oil, and every year since it has He propagated it as an exotic curiosity, no one dreaming of claim to under his patent.
