Buziness and Personal.

The Charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line Advertisements must be received at publication office asearly as Thursday morning to appear in next issue

To RAILWAY COMPANIES AND OTHERS, requiring data concerning Water, Steam, Air, or Oil, in Pipes, or other reservoirs, when under pressure, also Records or SPEED of Machinery, Railway trains, Dynamos, etc., etc. EDSON'S SPEED and PRESSURE RECORDING GAUGE, and ALARM APPARATUS. A Railway and Steamship Appliance for securing greater safety to human life.
The SPEED APPARATUS connected underneath the "time and pressure recording and alarm gauge." is specially adapted for factories. mills, etc., where the maintenance of any definite rate of motion is required. Upon Railways and Steamboats where Economy, Safety Time, and Speed should receive special supervision, and where every possible protection is demanded by the en tire community against the results of ignorance, carelessness, and recklessness, such a sleepless watchman as this ingenious device is, is practically indispensable. It is obvious that charts automatically traced, which contain avidence of the rate of speed we warrant tion of machinery, and whereon the degrees of steam pressure carried are also written, and which define the clock time occupied for any given performance, offer a combination of evidence at once impartial and exceptionally complete and incontrovertible; and must in all future time be of great practical value to inspectors and owners of botlers, travelers, and the public in general. The "Records" may be secured against tampering by a band and lock when desired. The apparatus, patented in America and England, is the invention of Mr. M. B. Edson, 77 Liberty Street, New York, who is the sole manufacturer, and to whom applications for information or pamphlets must be made.

For Sale.—The rights for foreign patents in a first rate profitable new invention. Patent allowed here. Thomas Hill, 48 Railroad Avenue, Jersey City, N. J.

You can buy a good Patent for Hop Growers, reasons ble. Address Jacob Engle, Jr., Sharon Center, N. Y.

For Sale.-One-half or whole interest in Candian pa tent that has netted inventors with \$500 capital \$50.000 in six years in the U.S. Reason for selling, no time to develop Canada. To verify above statement, books open for examination. Address, with references, Edward Taggart, Grand Rapids, Mich.

Wonders in Electricity, 168 pp., \$2. Latest and best book. All electrical books. College Electrical Eng., N. Y. Best Popular Science Works, 15 cents each. Catalogue free. J. Fitzgerald, 20 Lafayette Place, New York.

AVAL BATTLES, ANCIENT AND MODERN. By Edward Shippeu. J. C. McCurdy & Co., Philadelphia, Pa. NA

This is a large octavo of more than 700 pages and containing a large number of illustrations. In a preface the compiler says that the collection is intended to present, in a popular form, an account of many of the important naval battles of all times, as well as some combats of squadrons and single ships. In most instances an endeavor has been made to give the causes and the results of these encounters, and no statement has been knowingly made for which authority cannot

HINTS TO CORRESPONDENTS.

No attention will be paid to communications unless accompanied with the full name and address of the

Names and addresses of correspondents will not be given to inquirers.

We renew our request that correspondents, in referring to former answers or articles, will be kind enough to name the date of the paper and the page, or the number of the question.

Correspondents whose inquiries do not appear after reasonable time should repeat them. If not then pub lished, they may conclude that, for good reasons, the Editor declines them.

Persons desiring special information which is purely of a personal character, and not of general interest should remit from \$1 to \$5, according to the subject. as we cannot be expected to spend time and labor to obtain such information without remuneration.

Any numbers of the SCIENTIFIC AMERICAN SUPPLE-MENT referred to in these columns may be had at the office Price 10 cents each.

Correspondents sending samples of minerals, etc. or examination, should be careful to distinctly mark or label their specimens so as to avoid error in their identi

(1) J. R. M. Writes: I am about to make some experiments in screw propulsion, and would like information on the following: 1. All other things being equal, which has shown the best results, a two, three on size of propeller, velocity at which it is run, and the fineness of model of the vessel. 2. Is there any rule governing the proportion of the pitch to the diameter? A. No. 3. Who is the inventor of the screw most in Acid, apparatus for concentrating sulphuric, W. use? A. There have been many inventors and improvers. Smith, Ericsson, Griffiths, Stevens, etc. 4. What is the best way of making a screw for a model boat, saya screw of 3 inch diameter? A. You may cast it or have it shaped up of sheet copper or brass.

(2) H. M. P. asks: 1. Will increasing the speed of a thrashing engine from 130 revolutions per minute to 175, by enlarging separator pulley, increase power of engine, and will it save fuel? Engine 7 x 12, rated 10 horse. A. It will increase the power of the engine carrying the same steam, but will burn more fuel. 2. Is there any black paint for a boiler that will not injure the iron? A. Black varnish is good, or the "Norwood " smoke stack paint.

(3) A. S. To make one gallon of the paint for a blackboard, take 10 oz. of pulverized and sifted pumice stone, 6 oz. powdered rotton stone (or infusorial silica), 34 lb. of good lampblack, and alcohol enough

shellac in the remainder of the gallon of alcohol by digestion and agitation, and finally mix this varnish and the paste together. It is applied to the board with a brush care being taken to keep the paint well stirred so that the pumice stone will not settle. 'Two coats are usually necessary. The first should be allowed to dry thoroughly before the second is put on. 'The second coat should be applied so as not to disturb or rub off any portion of the first. One gallon of this paint will ordinarily furnish two coats for sixty square yards of blackboard. When the paint is to be put on plastered walls, the wall should be previously coated with glue size-glue, 1 lb.; water, 1 gallon; lampblack, q. s. to color; put on hot.

(4) A. J. T. asks how to reproduce faded photographs? A. The following method is simple and in most cases quite effective: Put the card in warm water until the paper print may be removed from the care backing without injury. Hang up the paper in a warn place until perfectly dry, and then immerse it in a quantity of melted white wax. As soon as it has become thoroughly impregnated with the wax it is pressed under a hot iron to remove excess of the latterand rubbed with a tuft of cotton. This operation deepens the conof the picture and brings out many minor details previously invisible, the vellowish whites being rendersore transparent, while the bull tones and shadows retain their brown opaque character. The picture thus prepared may then be used in preparing a negative which may be employed for printing in the usual way.

(5) E. P. asks how to produce various pronze tints (or bronzes) on iron, zinc, copper, and brass? A. Dissolve 4 oz. hyposulphite of soda in 1½ pints water, and add a solution of 1 oz. lead acetate in 11/2 pints of water. The metals to be colored are placed in this liquid, which is then gradually heated to the boiling point. This treatment produces on clean iron a light steel blue color, zinc becomes bronze, and copper or brass becomes successively red, scarlet, deep blue. light blue, bluish white, and finally white with a tinge of red. This dip has little effect on lead or tin. By replacing the acetate of lead in the solution by sulphate of copper, brass becomes first of a rosytint, then green and finally an iridescent brown color. Zinc does not color in this liquid; it reduces and precipitates the copper as a dark brown sponge, but if boiled in a dip containing both the lead and copper salts, it becomes covered with a black adherent crust, which may be improved by coating with a thin wax lacquer. Sometimes these liquids are thickened with gum tragacanth and applied to the plates with a brush to form designs, etc. and the plates are then heated to 212° Fah., and rinsed or plunged into one of the hot baths, by which a variety of effect is produced.

(6) A. Y. F. writes: Please inform me how to make a good enamel for carriage tops. A. Use: Asphaltum...... 150 parts.

Melt the asphaltum in the oil and add the thinners.

(7) A. W. H.—Otto of roses is made by distillation. The process is described very thoroughly in articles on page 924 of Scientific American Supple-MENT, No. 58, also on page 390, of Scientific Ameri-CAN SUPPLEMENT, No. 275.

(8) C. P. writes: I have a tin roof, and would like to know if it would be best to paint it. If so, what kind of paint shall I use? A. Paint your roof with red oxide of iron, or Prince's metallic paint and boiled linseed oil. No turpentine. It is a strong, durable paint for outside work.

(9) J. H. M. asks: Will you please tell me through the Scientific American what paper lagging is put on to iron pulleys with? A. Roughen the surface of the pulley and fasten the paper with rubber cement.

(10) J. G. asks how to compress common salt into a solid mass. A. Melt it, and pour it in suitable forms when in a molten condition. Salt melts at a red heat and is best heated in a covered vessel; and as it volatilizes at a higher temperature, there will proba-

(11) G. J. E. asks: How can I cement glass and metal? A. Mix 2 ounces of thick solution of glue with 1 ounce linseed oil varnish, or three-fourths of an ounce Venice turpentine; boil them together, stirring them until they mix as thoroughly as possible. The pieces cemented should be tied together for two or three days. This cement will firmly attach any metallic substance to glass or porcelain.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

July 3, 1883,

[See note at end of list about copies of these patents.]

Alarm. See Burglar alarm. Fire alarm.
