A MENACE TO PROSPERITY.

the multitude, who directly or indirectly suffer by it.

bills now pending cannot long endure, even if by any mis- done ? fortune they should pass both houses of Congress and receive the Executive signature. Nevertheless, in a single hoped to enjoy "free trade in inventions," in other words get year, such laws as House bills Nos. 3,925 and 3,934 contemplate would prove very hurtful if not widely disastrous to national prosperity.

The influence of new inventions, as a factor of industrial development and national wealth, is sufficiently conspicuous and generally recognized to make unnecessary any extended argument to prove it here. Nevertheless, a few facts bear- an absolute though temporary control of any new industry ing upon the question may be not without interest. Official inquiries made some years ago demonstrated the fact that something like nine-tenths of all the manufactures of the mately dependent on patent rights to endure a wanton discountry were of articles recently patented or made by patented machines or processes. The same is not less the the threat of such disturbance should call out protests from case to-day. The census of 1880 found our factories turning every honest manufacturer. out products worth, that year, \$5,369,000, \$00, by far the greater part being manufactures involving patent rights. In 1870 the annual products were worth \$3,385,000,000, and ! in 1860 only \$1,885,000,000. Thus, in twenty years, the in- has been done this year by the rapid and great rise of the crease had been nearly threefold. Meantime, the United Ohio River and its tributaries. The snow fall had been States patents issued had increased in number from 26,641 large, and for nearly thirty days the temperature has been to 223,210; now they approach 300,000.

main, factors of this phenomenal industrial development, but which rise in the elevated portions of Western New York, they were an obvious and potent factor, since the advance was Pennsylvania, and Virginia. Nearly every year floods simichiefly in industries called out or radically modified by re- larly caused do more or less damage, but last season's loss cent inventions. In agriculture, the conditions of labor in was so great on this account, that most people will be surwhich had been materially changed for the better by the in- prised that such great disaster could be inflicted in two followventor's labors, the annual product had increased in value ing years. Last year the water in the Ohio at Cincinnati the fewest patents in proportion to population being issued from \$1,400,000,000 in 1860 to \$1,800,000,000 in 1870 and reached a depth of 66 feet; on the evening of Feb. 8, it had to Mississippi, which received one for an average of 22,188. \$2,200,000,000 in 1880. It may be a surprise to some to reached 63 feet, and gave promise of reaching the extent of note that the manufactured products of the country now ex- last year's flood. Large numbers of people were compelled cel in value the agricultural nearly two and a half to leave their homes, most of the railroad communications times. Both these great productive interests increased in of the city were interrupted, and there was great damage to value much more rapidly than did the population of the property, although there appears to have been no loss of life. country, demonstrating a largely increased individual capacity of production, thanks wholly to the labors of inventors. women, and children having to be removed from their In 1860 the population was 31,000,000; it rose to 38,000,000 houses by small boats stopping at the windows. About the in 1870, and to 51,000,000 in 1880.

Meantime the aggregate wealth of the country increased to be seen, and numbers of factories were inundated. from \$16,000,000,000 in 1860 to \$30,000,000 in 1870 and lagacy of debt, depreciated credit, heavy taxation, and all were flooded, including the homes of 25,000 people. the other evils incident to an exhaustive civil war.

Thus twenty years of unexampled progress were coincident with a period of unprecedented activity on the part of hela, and lesser streams, as well as on the Ohio; but the inventors. No one presumes to say that such progress was principal disasters have been on the Ohio and its tributaries. not desirable and beneficial, or that it could have existed or is likely to continue without a continuance of a like degree of activity on the part of those who more than any others make industrial progress possible.

----PATENT OFFICE WORK OF 1883.

The Hon. Benjamin Butterworth, Commissioner of Patents, submitted his annual report to Congress Jan. 29. From it we learn that the total receipts of the office for the The experience of Canada and other British colonies that year 1883 were \$1,146,240, and the expenses \$675,234. There was in the Treasury to the credit of the Patent Office, at the commencement of the year, \$2,205,471; and adding the excess of receipts over expenditures for the twelve months, this fund amounted, on the 1st of January last, to \$2,676,476.

> The total number of applications relating to patents was 34,576, of which 33,073 were for inventions, 1,238 for designs, and 265 for reissues. There were 2,741 caveats filed, 915 applications for registry of trade-marks, 834 for registry of labels, 18 disclaimers, and 640 appeals, making a total of 39,724 cases for investigation and action.

> The number of patents issued in 1883, including designs, was 22.216. and there were 167 reissues, or a total of 22,383, against 19,267 patents and reissues in 1882, and 16,584 in 1881. There were also 902 trade-marks registered in 1883, and 906 labels, while 8.874 patents expired, and 2.366 were withheld for non-payment of the final fee.

New York State received the largest number of patents, 4,359, Massachusetts following with 2,173, and Pennsylvania with 2,168; then come Illinois with 1,792; Ohio, 1,604; Connecticut, 883; Michigan, 727; Indiana, 712; Missouri, 625; California, 596; Iowa, 445; Wisconsin, 394; Rhode Island, 327; and Minnesota, 310. The United States Army is credited with 6 and the Navy with 3 patents. According to population, the District of Columbia received one patent on the average for 318 inhabitants. Massachusetts one for 320, Connecticut one for 705, and Rhode Island one for 845,

The patents issued to citizens of foreign countries numbered 1,259, or 124 more than were so issued in 1882. England takes the lead with 435. followed by Canada with 251. Germany 235, France 179, Austria 33, Switzerland 22, and Belgium 20.

The Commissioner closes his report by directing attention to the inadequate room allowed for conducting the great and steadily growing business of the Patent Bureau, the insufficient force, and the necessity for paying better salaries to command a higher grade of talent in the examining corps. Similar views were expressed by Commissioner Marble last year, but they were unheeded, and the growth of the business now invests them with added force. It is not as though the Besides these principal losses there was much damage cost of such additional help and improved service were to bemade at the expense of the tax payers, for the funds therefor have already been accumulated from the fees paid by patentees, and it is no more than justice that sufficient should be appropriated from the receipts to insure the best possible administration of the business of the office.

Removing Stains from Cotton or Linen Goods, Curtains, etc.

Grease spots are best removed by soap; stains from oil Rico on the 21st of November. He also describes a wonder colors, as a rule, do not resist the action of a mixture of of the sky seen about that time in Sulphur Springs, though ; soap and caustic potash. If spots of tar or axle grease are It seems to us that the country has not yet reached that he is not certain as to the exact date. The phenomenon was unaffected by soap, they will usually yield to the solvent action of benzine (so-called), ordinary ether, or of butter, The object was seen in the southwest in a vertical posi- which may afterward be removed with soap and water. Another solvent for such stains consists of a mixside; reverse this condition of things, and how long will we advance of its usual period of visibility. It is seldom seen be able to lead in the industrial race? in this latitude until February and March.

Curiously, those legislators who profess to be most anxious to extend and expand our foreign trade, to build up an ones whose anti-patent tendencies would soonest make it impossible for Americans to command their home market, much less invade successfully the neutral markets of the world in competition with our increasingly inventive rivals. The last improvement in any article commands the trade: if we cease to make these improvements, or the majority of sensible glow in the opposite quarter of the heavens. It is them, our hope of ever attaining commercial eminence will have nothing to rest on.

But a more immediate menace to our industrial prosperity dulations and flashes mingle with its soft, nebulous light.
