## engineering inventions.

A combined feed pump and condensing apparatus has been patented by Mr. John Houpt, of ase
Springtown, Pa. This invention consists mainly of a whistle or alarm attachment to the safety valve for in dicating the internal pressure and working condition of the auxiliary force or feed pump, and relates par ticularly to
inventor.

## AGRICULTURAL INVENTIONS.

A hay rack has been patented by Messrs. Jonas H. Hittle and Aurin D. Davis, of Mackinaw, Ill. The construction is such that the side and end pieces carrying hay, and by a different arrangement may be adapted to carry hogs, calves, and other animals.
A stalk cutter has been patented by Mr. Robert M. Pierson, of Mayesville, S. C. Any number of pairs of cutters may be employed, but the construc
Hon Is such that as the machine moves forward the stalks will be caught by the concave edges of revolving catters and brought against the forward moving edges
of stationary cutters, by which they will be cut to of stationary cutters, by
pieces and passed rearward.

A fertilizer distributer has been patented by Mr. Van Brunt Magaw, of Flatlands, N. Y. With the smperler drive wheel, so one of theside drive wheels can smaller drive wheel, so one of theside drive wheels can
drop into a depression in the ground, without affecting the operation of the machine, with other novel features to promote
fertilizers.

## MISCELLANEOUS INVENTIONS.

A cap nut has been patented by Mr. Chas. D. Thatcher, of Columbus, $\mathbf{O}$. This invention consists from the main body of the nut or cap, the two parts being sabsequently secured together by suitable means for completing the rat.
A machine for making and covering cords has been pateuted by Mr. Alfred Fornander, of Brook-
lyn, N. Y. This machine is a novel construction for twisting and coveriug the several strands of a cord with silk or other material, and then twisting the twisted

A carriage top prop has been patented by Mr . Charles D. Thatcher, of Columbus, $\mathbf{O}$. It is so con-
structed that the employment of screw threads is disstructed that the employment of screw threads is dis-
pensed with in connecting the bolt with the bow plate, pensed with in connecting the bolt with the bow plate,
the bow plate and bolt being locked together by means the bow plate and bo
of an offset and Jug.
A safety snap hook has been patented by Mr. Henry R. Hammond, of Foster Center, R. I. The snap hook has a pivoted and notched latch and a slid-
ing and spring-pressed bolt, with a hook engaging the notch of the bolt, the hook being readily operated by
A folding wardrobe bed has been patent ed by Mr. Adam Scbieffer, of New York city. It consists of a case, with pivots to receive the bed bottom,
and such other arrangements that the bed can be readily folded into a shallow case, and easily folded readily folded into a shallow case, and easily folded
and unfolded, beiug firmly supported when unfolded. A bottle stopper has been patented by Mr. Michael I. Dougherty, of Carbondale, Pa. It may be
used for all bottles stoppered on the outside, may be quickly applied or removed with one hand, and if one part of the stopper is overworn or injured it can be re placed without discarding the whole stopper.
A bench for jointing lumber has been patented by Mr. Clarence A. Williams, of Webster City,
Iowa. This invention relates to certain improvements on a former patented invention of the same inventor,
and consists of a special arrangement, construction, and consists of a special ar
and combination of parts.

A press for moulding letters from artificial stone has been patented by Mr. Chester A. Weller, of
New York city. The artificial stone mixture is filled juto a hopper, thence moved where it can be pressed by a lever, movable press plate, and die, and delivered by the machine for drying and finishing.
A screw driver has been
A screw driver has been patented by Mr. James M. Ricketts, of Charleston, Ill. This invention consists of an attachmentfor holding screws upon the
point of a screw driver, a rectangular frame being andhavingguid ar ariver
screw.
An improved gate has been patented by Mr. Wiley M. Grisham, of Winchester, Ill The object
is to afford means whereby a rider may opeu a gate on is to afford means whereby a rider may opeu a gate on
approacbing it, and close it on leaving, without dismounting, and means are provided for raising the gate latch and opening the gate by one continuous move
A. fire escape has been patented by Mr. Thomas D. McKinzie, of Colorado, Tezas. This in-
vention is designed to save life from barning ships as vention is designed to save life from burning ships as
well as houses, and provides means whereby a boat or car may be lowered from the side of a vessel, or a car may ber

A brick machine bas been patented by $\mathbf{M r}$. Robert Underwood, of Bowling Green, Ky. The material placed in the mill is ground and tempered by the
action of the fingers on a revolving shaft, and settles down through an opening in the bottom plate into the moulds, which are completely filled by the action of a
A stump puller has been patented by Mr. David L. Grossman, of Rutland, Ind. The base frame has bars at its forward part, supporting pulley blocks,
and a rope or chain, and at its rear end is a capstan and a rope or chain, and at its rear end is a capstan
and sweep for pulling the stumps, the whole being constracted to be easily operated, and yet simply made and powerful in operation.

An elevator has been patented by Mr. Samuel Keim, of Altoona, Pa. It is a contrivance of mech
anism and supporting frame for working an elevator
platform ') a a hand crank for raiking and lowering bar-
rels and other heavy goods ont of and into cellars, and rels and other heavy goods ont of and into cellars, and

A draught bolt has been patented by Mr . Frank Wirty, of Appleton, Wis. It is made in two jointed half sections, and provided with pinchers,
wrenches, hammer, hatchet, nail pnll, and screwdriver, these tools being so arranged as to provide for their convenient the tongue.
A belt fastener bas been patented by Mr . Lonis C. Gleason, of Ter yville, Conn. It consists of a es adapted to be driven through the belt ends, and the edges of the puncues then turned down upon the belt, forming an annular rim upon the belt, holding the fas tener firmly and securisg the endis of the belt together
A hame tug has been patented by $\mathbf{M r}$ A hame tug has been patented by Mr.
Charles Hostert, of Hastings, Miun. It is so constructed that the tug is adapted to all the adjustments re quired, both up and down upon the hame, and as to lengths, so that a perfect it of the hame tug may be always effectea, and the inveution may be readily ap
plied to hames already in use. A combined table, bedstead, and chair has been patented by Mr. Robert C. Balke, of Bloomington,
Il. This is a novel constrcction and arrangement of III. This is a novel constrcction and arrangement of
the sectional jointed sills or side rails of the bedstead, in coctional jointion with bead and foot boards and folding
ind chairs, making an article of furniture which
A dumping wagon has been
A dumping wagon has been patented by Mr. Henry Hild, of Britt, Iowa. This invention pro-
vides means whereby the driver may direct the power vides means whereby the driver may direct the power
of the team either to haul the load to dump it, or to return the parts of the wagon to their normal position after dumping, and embraces a special construction and combination of parts with this object.
A stave jointing machine has been patentjoints both edges of a barrel stave at once, and makes the proper curve for the balge on staves of all widths; it is also antomatic, except as to the putting on and taking off of the staves and the starting of the saw
riages when the staves are set ready for jointing.
A fence making machine has been patented by Mr. George Q. Adams, of Quincy, Ill. This inven-
tion covers various novel features in mechanism for tion covers various novel features in mechanism for
aiding manual labor in maling fences of wires and pickets, by twisting the wires between the pickets, spacing the pickets, and winding into a roll the finished fence.
A ditching machine has been patented by Mr. Charles Shelmidine, of Boone, Iowa. It has a se ries of carrier forks, the shafts of which are pivotally
secured to an endless chain, and it automatically raises secured to an endless chain, and it automatically raises
the earth out of the ditch that the machine cuts, and deposits it
the ditch.

A brick machine bas been patented by Mr. A brick machine
Napoleon M. Plante, of Verplanck, N. Y. This invenNapoleon M. Plante, of Verplanck, N. Y. This inven-
tion provides a novel construction of the operating mechanism of brick machines, to make provision fo moulding of clean, sharp cor nered bricks of uniform density from clays of different qualities or stiffness.
A cotton sack holder has been patented by mr. John B. Robinson, of Dresden, Texas. The objec
of this invention is to provide a simple, inexpensiv device for holding sacks or receptacles upon pickers of cotton or other plants or fruits, so as to distribute tbe
weight of the sack and contents over the body of the weight of the sack and contents over the body of the
A cockle seed separator has been patented by Mr. Richard B. Wilson, Jr., of McLeansborough,
III. It is made of a series of inclined sieves, sieve boards, and discharge spouts and chute, arranged in a vibrating shoe, a cylinder covered with perforated sheet metal, and a driving mechanism, th
tibn covering a variety of novel featares.
tibn covering a variety of novel featares.
A combination drawing instr
A combination drawing instrument has been patented by Mr. Joseph McM. Scott, of Alle-
gheny City, Pa. It consists of a triangle, with tbe margins figured with different scales, having also an-
other triangle, a protractor, irregular curves, circles other triangle, a protractor, irregular curves, circles, instrument will serve the purpose of many single instruments.
An elevating and dumping apparatus has been patented by Mr. Benjamin K. Prater, of Mount and lowered, and so that platiorm is hung to be raised at the top of the shaft, while there are devices to hold the car or box on the platform, so that when the lat-
ter is tipped the load will be emptied, with other novel

A quartz crushing machine has been pa tented by Mr. Cyprian Dandurand, of Virginia City. Nevada. The beater arms are pivoted to the periphery of a horizontal rotating drum, to be thrust down the
descending side of the drom on the quartz lying on a die bed, and there is a novel combination of screens to facilitate the discharge of the pulverized ore, with

A wagon box strap bas been patented by Messrs. Dwight H. Finch and William H. Nattrass, o
Aurelia, Iowa. Instead of the usual wooden cleats for Aurelia, Iowa. Instead of the usual wooden cleats for
securing end gates, this invention covers the use of a metal cleat or strap made in one piece, and centrally
grooved, the lengthwise ribs at either side of the groove grooved, the lengthwise ribs at either side of the groove
preferably baving a facial outline, to give the necessary preferably baving a facia
etrength with lightness.

An excavator has been patented by Mr . Cyrus Howard, of Pittsburg, Pa. With the excavat-
or track body are two sers of wheels with an axle for or track body are two serss of wheels with an axle for
each set and means for rigidly flxing either axle from trarning ander the truck, with variou novel features, so the excavator will take up earth from the line of exoswagon.
diffusing, defecating, and circulating ap
of New Orleans, La. This invention covers improved rrangements for charging the tanks, means for heating ing the liquor in the mauufaciure of sugar from cane hg the iquor, or masat or beet roots, for the more cane, extraction of the juice from the plants, and the treat ment of the residues.
A combined horse power and jack bas been patented by Mr. Alfred Mauck, of Toronto, Kansas. ombined with the base frame is a pivoted frame hav ng upwardly projecting rabbeted arms, sweep sockets, nd a separable wheel, the drive rope or chain being ttached to shafts pivoted to a frame, whereby he ma chinery may bedriven at a greater or less speed as dered.
The manufacture of razor blades forms the subject of a patent issued to Mr. James Memmott, of orcesser, Mass. The inveution consisss. of the mode of olled with concave sides, then bringing the blanks nder a trip hammer to the general form of two razo blades placed edge to edge, then by means of dies edges properiy hammered, and cutting the blades ,

## NEW BOOKS AND PUBLICATIONS

A Treatise on Valve Gears. By Dr. Gustav Zeuner, Zurich. Translated from
the German by Prof. J. F. Klein. E. \& F. N. Spon, London and New York.

German thoroughness in mathematical demonstration and the indefatigable working out of details are istinctively characteristic of this book. It has been ccepted as good authority and attained general act reacbed its fourth edition. Double slide valves, or gears with independent cut-offs, receive in this edition much more attention than was formerly given to that branch, this part of the book having been entirely rewritten. Simple fixed expansion valves, the most prominent of those with variable expansion, and the best known forms of cut-off gear, are described separately and with great thoronghness of detail.
Country Cousins; Short Studies in the
Natural History OF the United STATES. By Ernest In
\& Brothers, New York.
Thisis in no way a test book, but its twenty-one chapters afford so many breezy sketches, many o which are of practical adventure in various parts of
the world. A good proportion ol the matter has heretofore been published in the leading magazines, whic is no poor criterion of its good character, axd it is now presented in
ing volume.
Fishes of the East Athantic Coast. By
Louis O. Van Doren and Samuel C.
Louis 0. Van Doren and Samuel C.
Clarke. The Angler Publishiag Com
pany, New York.
This is a text book on the salt water fishes that are taken with hook and line from northern Maine to the
Gulf of Mexico, giving the scientufic and popular de scriptions, their habits, and when and where and how they are cangbt. The illustrations are numerous, and re photo-likenesses of the fish

marked or labeled.
(1) E. J. P. asks: 1. Have the satellites of Jupiter, Saturn, etc., been observed to have an at-
osphere, and has aught to indicate the presence of mosphere, and has aught to indicate the presence of
water been noticed on any of them? A. Nothing water been noticed on any of them? A. Nothing
known of the physical condition of the satellites of the other planets. 2. Has Sir W. Herschel's observation in regard to equal axial rotation and yearly revolution of Jupiter's moons been confirmed by subsequent observers, and has this been likewise observed in the case of Saturn, Uranus, and Neptune? A. Herschel's
theory in regard to axial rotation of satellites has not been confirmed.
(2) W. E. M. asks if there is any eff. cacy in the so-called mad stone for the cure of a mad dog bite. A. The stories which have so often been told of the virtues of the "mad stone"are utterly
without foundation. It is a mere popular delusion, without foundation. It is a mere popular delusion,
unworthy of notice. 2. How manysquare feet of heat ing surface it takes for an automatic cut off engine of one horse power, steam pressare 500 pounds? A. 10 one horse
equare feet.
(3) E. C. W. asks: Does it require more fuel to keep the boiler pressure at 60 pounds than it does at 40, when neither boiler nor engine is over-
worked? If no more, will it take less? $A$. There is more woat radiated from all parts heated by the steam at 60 pounds than at 40 pounds; also the waste products
heat radial of combustion pass up the chimney at a higher temperature at 60 pounds than at 40 pounds. With ordinary engines having no automatic or variable cut off, where the regulating of the steam is done by a common
governorvalve, and with no particular economy in the
steam spaces between the governor and the cylinder, steam spaces between the governor and the cylinder, the lower pressure is no doubt the most economical With the latest and most improved types of automatic sion favors the higher presure and a corresponding sion favors the higher pressure and a corresponding
(4) J. D. G. asks: 1 . What size steam pipe is required to cake away the steam from 1,000 horse
 tion in steam pipes. under different temperatures per
square foot of pipe surface. A. The condensation in steam pipes is so variable, from the conditions of it surround ing medium, that no simple rule will give a satisfactory answer. The amount of heat escaping
from the surface is the true index, but varying very from the surface is the true index, but varying very
much with the moisture and circulation in the air in contact with the outside of the pipe. The velocity of the steam in the pipe also has a controlling influence upon the amount of water condensed. Measuring of satisfactory solution of the question. As a general rule, for a temperature of $60^{\circ}$ one square foot of boiler
or steam generating surface is requirel for 10 square feet of exposed pipe surface.
(5) G. R. A. asks (1) how to obtain the standard of an inch, and from where derived. A. You
may obtain tiee standard measure of inch, foot, etc. by addressing Bureau of Weiphts and Measures, Washing, D. C. 2. What is the rule for finding proportion
of diameter to circumference? Can an arc or a circle of diameeter to circumference? Can an are or a circle
be squared? If not, why? A. Multiply the diameter by ${ }^{3.14151592653588+\text { for the circumference. The circle cai }}$ be

## (8) T, F, B asks for

protecting steam pipes from rust. The mipes are used for greenhouse heating, and are partly exposed to frequent wetting. Am told that ordinary mineral paints
interfere considerahly with the radiation of heat. The interfere considerahly with the radiation of heat. The
material used shou d not prevent radiaino, nor set free any noxious. gasees under heat. Would ultramain the vicinity of New York that protect their pipes for in the vicinity of New
heating. Probably this arises that pretect their pipes ${ }_{\mathrm{a}}$ fear of defective service. In all orher kinds of heating apparatus he hepes are protected from rust and
appearance. Plumbago paint, i. e., ground plumbayo appearance. Plumbago paint it. e., ground plam tax
and linseed oil (boiled) mixed thick enough to be rubbed upon the pipes with a woolen pad or wiper. so
asto leave he coat thinner than with a brush, will wo doubt be the best for durability, and give out the mos heat. 2. Also, how to estimate the pound pressure of
a water connection, supplied by an elevated cistern or reservoir; will the distance a stream of water thrown by ordinary $3 /$ inch hose serve to indicate the amount
of pound pressure? A. The pressure from yourcistern maybe ascertained by dividing the height of the sur2033 widh will sive the perne in pound 2.:239, which will hive tbe pressure in pounds per qunare
inch. The jel height is uncertain, from the friction in inch. The
the pip.
(7) M. M. writes: Is a condenser now of any beneft to an engine? With our present improvements
with a cut-off at one-quarter stroke, with four expanwith a cut-off at one-quarter stroke, with four expan-
sions, does not that supersede the condensery why not? Can a vacuum be made by the use of the air pump that will be of any beneft to the ensizes? A small power will makea vacuum of fifteen pounds to the inch; a large one will do no more. If it worth what
it costs to male it If fromanimproved engine be transferred into a receive and then into a low pressure cylinder, the area of which is four times the area of the high pressure piston? Does
size of the piston add anything to the power? A. With size of the piston add anything to the powery A. With
all the modern improvements of automatic cut-off and all the modern improvements of automatic cut-off and
valve gear, the condenser has lost none of its benefl, valve gear, the condenser has lost none of its benefl,
but rather gained in requiring leess water for condensation than in the old forme; for any economy in steam saved is economy in the work of the air pump. A fair
vacuum is equal to 13 pounds per square inch on your piston. This is a large percentage on the mean pressure upon the piston, which may be as low as balf the and a mean piston pressure of 30 pounds your gain the air pump. A compound engine illustrates the economy of the condenser in a remarkable manner. You will find an interesting article and illustration of
the theory of the compound engine in Scientiric

(8) W. S C. asks: 1. How many inches would have to be added to the stroke of an engine to
increase it five horse power? A. This depends upon increase it five horse power? A. This depends apon
the size of the cylinder. 2. Is an engine 10 x 16 rated as powerful as $12 \times 129$ A. $1.2 \times 12$ is the more powerful. 3.
Can there be anything done for a cylinder that is cut, without reboring? A. We know of nothing but reboring for a cut cylinder. 4. What are blind tubes
eightinches long put into boilers for? A. Short blind tubes are parts of leaky tubes headed up and reinserted, and should not be used when new. tubes can be obtained.
(9) O. S. B. asks how to obtain the skeletons of animals, large and emall, also of birds. A. Use
a barrel of water with two or three pounds of caustic soda in solution for disintegrating the flesh from skeletons; two or three pounds of quicklime added to the
above helps the process, and bleaches. 2 . Will a common hot water boiler (galvanized iron) be etrongenough to generate steam for a $11 / 2$ horse power engine? A.
Could not trust a hot water boiler. Not enough surface for $11 / /$ horse engine. Your require 22 square feet heating surface, and also steam room.
(10) F. A. P.-The area of the main build ngg of the New Orleans Exhibition is $1, y 78$ by 905 feet, ing at Philadelphia. There will be some extensions, but just how much space will thus be included is not
yet certain. The exhibition opens December 1 . The yet certain. The exhibition opens December 1. The
flve principal bu ldings of the Philadelphia Exhibition
(11) W. B. P. asks: What is the steadier pres sure of water-taking from a pumping main or from
a main from a reservoir? A. From the main from
and reservoir.
(12) A. R asks if there is any way that articlee of oft brase can be made hard of an iron nature.
A. Brass cannot be hardened except by hammering or
rolling. A composition resembling brass may be made el that can we hardened.
(13) Injectors for high lifts and long distance snction.-Referring to the inquiry of J. O. G. lift was 13 feet and the longitudinal suction 290 feet we learn from Mr. A. Aller, 109 Liberty Street, this city, tbat the Koring injector, of which he is agent, has
been applied wilh great success for longer suction and been applied with great success for longer suction and
higher ifits than thatmentioned. The Korting is one of the most effective of allt the injectors, and the manufacturers make a special point of guaranteeing high lifts and
(14) J. N. asks how mauy feet of No. 36 silk insulated wire it would take for the secondary
coil of aì induction coil which will be strong as the majority of people can stand by tuking the ends of the acondary coll in therr hands, pronded he rest of the feet of No. 36 wire will make a strong corlect. A. 20
(15) F. H. aska for the process of making Whiting, and also the process of making or mannfacturingplaster of Paris. A. Wbiting consists of chalk care
fully ground, then thoroughly washed, after which it is formed into balls and dried. Plaster of Paris s ordiPormed into bails and dried. Plaster of Parib s ord
nary gy paum (calcium sulphate) calcined so as to ex pel the water of crystallization, and then finely powdered. Itcontains 20 percent of water.
(16) H. C. H. asks for a receipt for a finish Por rubber tubing; something that is a liquid and very
thin and will dry quick, gloesj, and elastic, and so when stretched it will not coine fond but be olosess bo when strecteaed it will not come off, but be glossy when
comes back; something that will not be sicicky afte drying. A. The following is used on rubber balloous, and may prove satisfactory: Digest cold $1 / / 2$ ounces India rabber cat small in 1 pint of either chloroform, salphuric ether (masbed), or carbon disulphide. Thit
will dry as soon as laid on. Silicate of eoda, or solu will dry as soon as lasd on. Silicate of eoda, or solu-
ble glass, may be applied as a coatingfor rubber. It pre vents the gas from coming through. The ordinary varieties of varmish win crack, and therefore cannot be used.
(17) C. McD. writes: Please inform me as to the present and probable future demand for profes. the chemist fnd steady cmployment, and what is the niture of his work? What inducements does the pro-
feesion offer as io compensation, manner of living, in Pession offer as io compensation, manner of living, in-
dependence, etc. $\%$ Do you think that a young, man dependence, etc. $\%$ Do you think that a young man
with fair ability would prohably attain reasonable success, or in other words would you advise him to adopt the profession? A. The demanu for professional
chemiste is on the increse, but the supply is chemiste is on the increase, but the supply is greater
than the demand. In all kinds of technical establishmille and furnaces, in mines, in soap factories, mille where cloth is made and dyed, in fact everywhere that any: hing is produced from raw materials, the services of a chemist are needed. A chemist is generally a aalaried clerk, and cannot rise, as a rule, above the figure once given him, nnless by his knowledge he is successThen he is likely to receive an interest in the iucreased receipts. The average pay of an established and com petent chemist is probahly from $\$ 1,000$ to $\$ 2.000$ per annum. Success depends more upon the individual
than upon the pursuit of any special branch of learn than upon the pursuit of any special branch of earnincome than any chemist can ever be, still there are there are millionaires to-day who were newsboss in

## their younger days

(18) E. F. R. writes: 1. Suppose two bar magnets are placed one across the center of other, will the poles of eilher be affected or changed? If so, why
A. We think the magnets placed in the position scribed would not affect each other more than if placed in any other position with their poles the same distance apart. 2. of what diameter should an electro magne There is no fixed rule for the proportion of diameter to the lengtt of a atraight electro magnet. The core and
tee coil are generally adapted to the work to be done the coil are gen
(19) J B. M. writes: I have a battery, the cups made of hard rubber: some of them have small
leaks, and waste the fuid. How can the leaks be stopped? A. You can stop the leaks in your battery
cells by using a cement composed of gutte percha celle by using a cement composed of gutta percha,
(20) A. B. G. asks: When should cod liver oil be taken-midway between mea's, just befire, just after, or with the m
just after the meal.
(21) J. R. F. asks what muriate of potash and and what it is composed of. I tried to get some me something else. A. Muriate of poash is the old name for porassium chloride, or chloride of potaseium, and it is composed of chlorine and potassium. It is
worth in New York about $\$ 1.70$ per 100 pound, or 40 cents to 50 cents per pound pure.
(22) W. L F. asks the best mode of braz ing steel and iron. A. Steel and iron may be easily brazed with ordinary braes or copper, by cleaning the
parts to be joined, covering them with borax ground parte to be joined, covering them with borax ground
in water to a thin paste, then bind the parts together with iron wire and place a piece of brass upon the joint. Heat until the brass melte, when it will flow through
(23) N. W. writes: Suppose a car let loose upon rails at the top of an incline 100 feet long. with a
rise of 15 feet; a ad suppose at the foot of the iw. 1 ine it rise of 15 feet; and suppose at the foot of the ior- line it atta ins a speed of 20 miles an hour. How for will the
accaured momentum send it on level rails (eupposing acquired momentum send it on level rails (Rupposing
the frictional reeistance to be 10 pounds to the ton, and the resistance of ihe atmosphere to be disregarded)? Would the cargo any farther if it weighed 10 ons than if it weighed one ton reeeisiance of atmosphere being

## tance would be the

(24) R. S. P. asks: Will you bave the kindness to give me (1) a reecipe for silicate slating for blackboards, or any other good blackboard malerial? A. Lampblack and flour of emery mixed with spirit
aranish. No more lampblack and flour of emery should varnish. No mose lampblack and flour of emery should he used than are sufficient to give the required abrad ing surface. The thinner the mixture the better
Lampulack should be first ground with a small quarLamplack should be frrst ground with a small quarhe composition should be appled to thamp he composition should be applied to the smoothl phaned surface of a ooard with a common pant brush. Rub it down with pumice if too rough. 2. Also a recipe for the quick drying, glosyy ink used with the parent shadiing pen
black ink:
Iron sulphate.
Gum arabic.
Pure water.
the galls are frrst boiled in $13 . \ldots$ parts.... water, the iron and this solution then siowly added to the former
(25) A. L. F. asks how to make a good (eve polish. A. Try the following:
Blacklead pulverized................. 1 lb .
Turpentine.
Water.
Sugar
.1 gill.
1 gill.
(26) R. C. R.-A plane that rounds or puts abead on the edge of a board is a beading plane; a rounding plane; for a hollow or round groove, a grooving plane. There are over 8
planes for woodw ork
(27) G. R. writes: Two persons in the shop where I work have a dispute as to the strongest way to end and the load placed in the center. A says chat it
will be the strongest placed flat, while $B$ claims that it will be the strongest placed fat, while B claims that it
is the strongest placed on one corner. A. A is right. The bar placed square isas 673 to 568 for a bar placed diagonally.
(28) T. H. C. \& Mfg. Co. ask what material or misture to make to flll up patterns to make them
larger and heavier. On plane surfaces we use paper, but on uneven surfaces we want something of a plastic nature that will stand the wear of the sand. A. Shellac
varnibh and whiting brushed on iu several costs will varnish and whiting brushed on iu several coats will
raise the surface of irregular patterne, and will last a time with careful handling. Mase the mixture like nd use quickly.
(29) S. L. W. asks a receipt for a solution that will harden Bessemer steel. A. We do not know
that Bessemer steel can he hardened by simply dipthat Bessemer steel can he hardened by simply dip
ping in $a$ solution. $A$ nearly saturated solution of ing in a solution. A nearly saturated soition
prussiate of potash in water might make a hard surpace fllm. Casehardening with the same treatment as with iron
face of steel.
(30) J. P. P.-Delta metal is not on sale. It can be cast, forged, and rolled. Has a tensile strength of 48,100 pounds cast, 75000 pounde rolled
and 140,000 pounds in drawn wire per square inch. Steel can be cast in links. The inclination of the holes crystalline rock a slanting hole is preferred.
(31) N. H. B. asks for a simple method of detecting the presence of iron in water. In paper
making it is often very desirable to know whether making it is often very desirable to know whether
there is any iron in solution in the water. A. Boil the water with a little nitric acid, and then add a few drops of potasesium ferrocyanide; if iron be present, a bewell to concentrate the solution before adding the reagent, as the amount of iron may be slight.
(:3) J. F. asks how to melt rubber. . Rubber may be melted over a water bath. To obto disolve it in some suitable solvent, and then
evaporate that oolution to the deired consitency. An elaborate account of the rubber industries is is ive in Scientific Ambrican Supplement, Nos. 249, 251, ${ }_{255}$
(33) M. S. G. asks for a solution which lowly soluble in not too dilute hydrochloric acid, more readily in hot than in colld. Hot dilute salphuric acid
disoolves it with some diftculty. Much more easily diseolves it with some dififculty. Much more easily
soluble in dilute nitric a cid, but with concentrated niric acid it behaves like iron.
(34) F. B. D. writes: What can I mix with common lard so that it will melt at about $150^{\circ}$ ? I have a fre alarm that works by the melting of the material
and I am unable to make more of it, so that as it it now the machine is useless. A. Try mixing common
resin with
(35) A. C. writes: 1. Which battery will give the most powerful current? Aloo, which will
maintain that current the greatest length of time-the Grove. Bunsen, Smee, or Grenety Is it not the Grove? A. The Bunsen bichromate form of battery would pro-
bably answer your purpose best. 2. Please tell me bably answer your purpose best. 2. Please tell me
how mate make enectric motor. I dont mean one like
that deescribed in the article on "A An Fleatrical Cobe that deecribed in the article on "An Electrical Cabi-
net," in SUPPLEMENT. No. 191, but a regular motor. net," in Supplempnc, No. 191, but a regular motor.
One which would have power enough to run a Holtz electrical machine. A. You can make an electric mo-
tor by $\mathbf{t}$ No. 161. for a small dynamo. There is no difference
belween the motorand the dynamo except in the adjustment of the commutator, which you can readily Justment of the commutator, which you can readily
arrive at by a little experiment. 3. How many cells of arrive at by a itttle experiment. 3. How many cells of
the most powerful of the above batteries would it take
to tun $\begin{aligned} & \text { Holtz machine? }\end{aligned}$ A. It depends on the size of to run a Holtz machine? A. It depends on the size of
the Holtz machine. Probably 4 cells would run a small machine.
(36) L. H. writes: I am making a dynamo
ectric machine, with field magnets 6 inches by $41 / 6$
inches by 3 inch, wound with No. 18 silk covered
magnet wire. The extreme diameter of armature to be inches. I desire to use it with an incandescent lamp. What size wire shonld 1 wind the armature wilh if wee the orignaform of slemense in desireto chatre a different size? A. Unless sou place your field mag. nets in $a$ shunt we think that No 18 wire is to You should use No. 16 or 14. No. 18 wire would probably be the right size for your armature. An armalure for charging a secondary battery should be wound with coarse wire. 2. Winl sou give me an explanation of the terms "in series" and "for tension" A. The
term "in series" means connected one ater the other, nd the term "for tension" means substantially the same thing.
(37) E. L. P. asks how to prepare the pieces of limestone used in producing the calcium light with hydrogen and oxygen gas. What is the bett quality of
limestone to use, and where can it be ubained? $A$. The limestone is calcined, producing common lime. Common lime of good quality is generally used for cyliu-
ders of the oxyhydrogen light. Marble is often calders of the oxyhydrogen light.
cined and used for this purpose
(38) J. L. G. writes: Please inform me how to recolor ivory billiard balls that have become fadef.
A. For the red, which is what we presume you desife, neal of the following will answer: $a$. Macerate co dhineal invinegar, and boil the balls in the liquid for a tew milac. ©. Carmine dissolved in ammoni, may ve used. The tint is more purple red. $\boldsymbol{c}$. Immerse in a very dilute solution of stannous chloride, apd after-
ward in a boiling solution of Brazil wood's $A$ litule ward in a boiling solution of Brazil wood, A litlue
uastic turns the color to scarlet. $d$. Ivory dyed as last uastic turns the color to scariet. $\alpha$. IVory dyed as laet
directed is rendered cherry red by immegsion in a very nuue eoluc lizrin paste. ong in liquide, and when taken cur of hot liquid should be rapidly cooled by laying in cold water. (39) A. H. writes: 1, Have any books been written on electrical ynvinuer:ing, and what are
they? A. Sprague's new fork on Elecricity is yery hey8 A. Sprague's new work on Eleciricity is very
guod for a heginner. G/rdon's Electric Light, Pres cood for a heginer. G. rdon's Electric Light, Pres-
cot on Dynamos, Keg.
cen Testing, and schellen on Fleciric Light are of good works. 2 What course hould I pureue and what works read to become an elecrical engineer? A. Begin with Ganot's Physics; thoral physics, and also in mathematics. To becomethoroughly efficient electrical engineer, you should also
(40) W. M. J wants a metal or a com pound of metals to take a etereotype impression from type, the type being forced into the meal when it is nearly cool with a press: Have tried several compositions, but do not get perfection in every case, without nd brittle. A. We know of no metalunless it be fusible metal, made of bismuth, tin, and lead, that will an wer your purpose. Fusble metal that will melt in parts of lead, and 3 parts of tin.
(41) F. R. writes: Will you tell me whether am right or wrong in this: I contend that if a bullet be fired from a rifle perpendicularly in the air, when
it returns to the point whence it was fired it will have it returns to the point whence it was fired it will have
the same velocity it had when ii. left the rifle. A. You are wrong; the bullet going up has to overcome the resistance of the air as well as the force of gravity; com ing down, it is drawn by a force of gravity equal to also to overcome the friction of the arr. If the experiment were made in a perfect vacuum, the bullet would return with the same speed that it left the gun.
(42) J. A. H. asks: Which gets the harder h-a hammer or a nail-when the nail is struck with finger should bappen to share with the nail in its part of the "lick."
(43) J. T. G. asks a cure for chicken holera, roop, the gaps, etc. A. Our Supplement Nos. have valuable papers on chicken raising, treat head of a sick chicken; it is time and money wasted to ttempt to doctor it.
(44) A. S. asks: 1 . Is there an element with which oxygen does not unite? A. Fluorine is the only element which will not combine with oxygen. . 2. What are the advantages and drawbacks of high speed running engines? A. The advantage is speed. The
drawbacks are wear, tear, and care, as also waste of oil.
(45) S. W. Y. says: You have stated many imes that the sun is the scurce of all heat. Will yo inform us of the great source of all cold? A. Cold is and the lowest temperature we find at the poles is comparative warmth to that which can be produced artiffcially.

INDEX OF INVENTIONS For which Letters Patent of the United States were Granted
October 21, 1884,
