Scientific American.

ESTABLISHED 1645.

MUNN & CO., Editors and Proprietors. PUBLISHED WEEKLY AT

No. 361 BROADWAY, NEW YORK.

O. D. MUNN.

TERMS FOR THE SCIENTIFIC AMERICAN.

One copy, six months, postage included..... 1 60 Clubs.-One extra copy of THE SCIENTIFIC AMERICAN will be supplied

A. E. BEACH.

gratis for every club of five subscribers at \$3.20 each; additional copies at same proportionate rate. Postage prepaid. Remit by postal order. Address

MUNN & CO., 361 Broadway, corner of Franklin Street, New York.

The Scientific American Supplement

is a distinct paper from the SCIENTIFIC AMERICAN. THE SUPPLEMENT is issued weekly. Every number contains 16 octavo pages, uniform in size with SCIENTIFIC AMERICAN. Terms of subscription for SUPPLEMENT, \$5.00 a year, postage paid, to subscribers. Single copies, 10 cents. Sold by all newsdealers throughout the country.

Combined Rates .- The SCIENTIFIC AMERICAN and SUPPLEMENT will be sent for one year, postage free, on receipt of seven papers to one address or different addresses as desired.

The safest way to remit is by draft, postal order, or registered letter. Address MUNN & CO., 361 Broadway, corner of Franklin Street, New York

Scientific American Export Edition.

The SCIENTIFIC AMERICAN Export Edition is a large and splendid peri odical, issued once a month. Each number contains about one hundred large quarto pages, profusely illustrated, embracing : (1.) Most of the plate and pages of the four preceding weekly issues of the SCIENTIFIC AMERI CAN. with its splendid engravings and valuable information; (2.) Com-CAN, with its spiendid engravings and valuable information; (2.) Com-mercial, trade, and manufacturing announcements of leading houses. Terms for Export Edition, \$5.00 a year, sent prepaid to any part of the world. Single copies, 50 cents. [37] Manufacturers and others who desire to secure foreign trade may have large and handsomely displayed announcements published in this edition at a very moderate cost

he SCIENTIFIC AMERICAN Export Edition has a large guaranteed circulation in all commercial places throughout the world. Address MUNN & CO., 361 Broadway, corner of Franklin Street, New York.

CHANGES IN THE PATENT OFFICE.

Mr. R. G. Dyrenforth, of New York, Assistant Commissioner of Patents, has resigned the office, and Mr. R. B. Vance, of North Carolina, has been appointed to the same position.

During the recent brief interval between the resignation of Mr. Commissioner Butterworth and the appointment of Mr. Montgomery, the present Commissioner of Patents, the duties of that office devolved upon Mr. Dyrenforth, and he at once set to work to try to bring about a reform in the bureau, with a view to putting an end to the long delays in the transaction of business-abuses which Mr. Butterworth was unable to cope with. Under Mr. Dyrenforth's rule, brief as it was, there was a notable increase in the activity of the office.

Mr. Vance, the new Assistant Commissioner, was lately a member of Congress and chairman of the Committee on Patents. During his Congressional service he robs himself of timely rest. The morning newspaper, he made himself very familiar with the affairs of the Patent Office, and took an active part in the House of his house to call him at any and all times as ide from his Representatives in upholding the interests of inventors, repose; the electric light to keep his brain unduly at a time when hostile legislation was advocated by others. Mr. Vance is a man of much ability, and his sleeping coach, which may keep him constantly on the acceptance of the office of Assistant Commissioner will, | rail (if he choses to so travel) for continuous weeks we think, be highly advantageous to the bureau.

----HERAT.

Whether the Russian advance upon the northwestern frontier of Afghanistan shall be stayed at the mountains or pass on to Herat the coming summer, remains to be seen. In either case that ancient city will hoodlums, that make night hideous with soul-jarring continue to be the center of the most commanding sounds, hasten the premature endings of useful lives. political and military interest. Sooner or later it must And when, superadded to all this unphysiological be determined, by skillful diplomacy or much fighting, strain, we have the assault of a pestilence that poisons, whether Russia or England shall hold that time-hon- like cholera, how much exemption can such overored key to Central Asia. Meantime all readers of tele- wrought organisms expect? How much of resisting graphic news from that quarter are asking for informa- immunity can such overstrained and exhausted nerve tion touching the present condition of the city and its force oppose to the invading foe?" surroundings, and the reasons for its apparent importance from commercial and military points of view.

The geographical situation of Herat, 34° 22' N. lat. 62° 9' E. long., with its elevation of about 2,500 feet above the sea, gives it a charming climate. The valley in which it lies is the granary of Afghanistan, and its overwork. There are, of course, exceptional cases, but surrounding gardens yield fruits corresponding with it is not with these we have to do, but with the broad those of Southern Europe. Central New Mexico has about the same latitude and a similar climate, though less temperate and somewhat drier. The plain of Herat is well watered by canals from the Heri River, and is said to contain fully 400 square miles of arable land. The upper valley of the Heri is described as a beautiful rolling country furnishing the finest of pasture lands. Three or four miles south of Herat the river is crossed by a magnificent bridge of 23 arches.

The territory tributary to Herat extends east and west from near the sources of the Heri to the Persian frontier, about 300 miles; formerly it extended north and south 200 miles from the Merv boundary to the northern limit of Seistan. The Russian conquest of Merv has cost Herat all its territory on the plain north of the Parapomisus Mountains, and has pushed the disputed boundary to within 40 miles of the city to the north, as the Russians claim, or about twice that dis tance according to the English and Afghan authorities

The city is in the form of a quadrangle, nearly a mile on each side. On the western, southern, and eastern faces the lines of defense are almost straight. and are broken only by the great gates and their defenses. The northern line is broken by two gigantic earthworks, the old citadel and the new citadel, built of sun-dried bricks. The city wall rests on the summit of a huge embankment averaging 250 feet wide at the base and fifty feet high. The wall proper which crowns this vast earthwork is 25 feet high and 14 feet thick at the base. It is surrounded by a ditch 46 feet wide and that the condition of nervous excitement and over-16 feet deep, and is supported by 150 semicircular towers.

The colossal character of these earthworks leads Sir against it. Henry Rawlinson to infer that the city, as a stronghold, must date from prehistoric times-from that period of Central Asian history which preceded the has served to dissipate, is that which attributed a conrise of the Achæmenian power, and which in Greek tinuance of good health to a saving of the vital forces romance is illustrated by the names of Bacchus, Hercules, and Semiramis. Its dominant position with reference to Central Asian and Indian affairs is proved by a military history unequaled by any other city-a record of more than fifty sieges, undertaken, as Vambery has pointed out, not so much for the sake of the rich soil which surrounds Herat, as on account of the he tells us that he had hopes by a life of ease, desire for conquest with which it has inspired sometimes India, sometimes Central Asia.

The population of the city under these great vicissitudes of fortune has naturally varied greatly. In times of great prosperity and peace it has numbered a million or more; at other times it has dwindled to a few thousand; now, it is variously estimated from 25,000 to 50,000 or more. It is believed that the present that Johnson's physical ailments would long before city comprises only the citadel of the city that once have proved unsupportable without the unremitting covered the surrounding plain for many miles.

DO WE WORK TOO MUCH?

[APRIL 25, 1885.

We have before us an interesting paper on "The Hygiene of the Nervous System," contributed to and reprinted from the Alienist and Neurologist by C. H. Hughes, M.D., of St. Louis. The belief expressed therein of a cholera visitation during the coming summer or autumn is supported by good authority, viz., the experience with former European epidemics, and the precautions suggested by the author are well advised and timely. He enumerates and describes the various physical and mental conditions which invite the infection in man and increase its virulence, among which he reckons engrossing and continuous application to business affairs. Dr. Hughes denounces a tendency he has discovered among Americans to "overwork."

He says: "The cause of much of the premature decrepitude and nerve degeneracy and breakdown of our day is in the many inventions man has devised whereby often read through before breakfast; the telephone in stimulated through the retinæ; the railroad and the without rest from the noisy and exhaustive cerebrospinal concussions of this mode of travel; hasty meals and telegrams, and business, and nightmare sleep, all commingled, wither and wreck lives innumerable, which, under wiser management, might end differently; and the needless noises of the city, the bells and steam whistles, howling hucksters, noisy street cars, yelling

The question. How much resistance can an overstrained organism offer to the assult of the gruesome scourge? it is not for the lay mind, but for the medical faculty to consider. There is, however, good reason to believe that Doctor Hughes would find it impossible to prove that this "overwrought" condition is due to assertion that we are an overworked people, and that "the cause of much of the premature decrepitude and nerve degeneracy and breakdown of our day" is begotten of overwork. Were we so bold as to express an opinion on the cause, we should say that it proceeded in great measure, if not in nearly every instance, from bad habits, from the immoderate use of liquor or other stimulants or irregular habits, or both, and in this assertion we could hope to be sustained by business and professional men of long experience, who have had the opportunity and inclination to study their business associates and employes.

Singularly enough, the Doctor, after informing us that undue excitement, anxiety, and overwork leave the system peculiarly exposed to and at the mercy of the infection, proceeds then to furnish us with evidence to disprove his own proposition. He says:

"During the week of the great St. Louis fire in 1849, the ravages of cholera, which up to that event had reached a mortality of over two hundred a day out of a population of fifty thousand, almost entirely ceased, so stimulating and invigorating was the excitement of that week to the brains and nervous systems of the people, the psychical exaltation inseparable from the sudden necessity thrown upon so many business men for repairing the sudden damage and re-establishing their abruptly interrupted business."

If the Doctor is sure about this, it would seem as though active employment, both mental and physical, furnished the best protection against cholera, and work which he most deplores as inviting the dire malady in reality presents the most effective barrier

Among the many beliefs or rather superstitions which the light of recent investigation and experience by inaction. A man was supposed to have a certain amount of vitality with which, as with his bank account, he could be saving or prodigal. Goldsmith, who besides being a poet was a doctor of medicine, and attended lectures in England, France, and Germany, only reflected the general belief in the doctrine when

"To husband out life's taper to the close,

And keep the flame from wasting by repose." His contemporary, Dr. Johnson, too, believed that the seven years of unceasing labor that he gave to his dictionary would shorten his life. There is reason to believe, however, that a life of ease would have hastened rather than postponed the demise of the former, and toil of which he so bitterly complains.
