ENGINEERING INVENTIONS.

A boiler flue cleaner has been patented by Mr. James M. Ferguson, of New Orleans, La. The nozzle has a central aperture in its disk portion, withan inner tubular extension, around which is an annular space opening through the disk portion, and connecting with a steam chamber of the nozzle, whereby the flue cleaner is operated to remove dirt and soot and preven the formation of scale.

A slide valve has been patented by Mr. William Mitchell, of Altoona, Pa. It has a central exhaust chamber, and the steam inlet port is formed clear through the body of the valve, the tops or outer edges of the side bars of the valve at each side of the exhaust chamber standing back of the plane of the contact faces of the chamber walls which form the valve face, so as partly to equalize the pressure at both sides of the valve and reduce its length of travel.

A revolving cylinder engine has been patented by Mr. John J. Blair, of Cincinnati, O. Combined with a fixed piston and a revolving cylinder surrounding it, with a cylindrical chamber in the piston havrounding one end of the rod, weighted levers on the sleeve, and a plate on the ends of the rod against which the ends of the weighted levers rest.

AGRICULTURAL INVENTIONS.

A cutting apparatus for reaping and mowing machines has been patented by Mr. Elias Hazelton, of Brantford, Ont., Canada. It consists of an endless chain of knives, made by chain links, with a projecting bracket from one side adapted for the attachment of a knife, so that when the chain is run back and forth along a guide rail the edges of the oppositely mov ing knives cut against each other.

A seed planter has been patented by Mr. Charles C. Kierulff, of Starke, Fla. It is a light wooden box, tapering to forman edge like a spade on its lower end, with a slanting partition to guide the seed, and a vertically-sliding gate, with other novel features, the device to be operated by hand to make the holes in the ground, and mechanically drop therein cotton, corn. and similar seed.

MISCELLANEOUS INVENTIONS.

A hat and bonnet fastener has been patented by Clara Abell, of Geddes, N. Y. Combined with a hat or bonnet is an elastic band having one end secured to the hat or bonnet, and having a hair pin attached to the opposite end.

A lumber drier has been patented by Mr. Orman A. Duke, of Clanton, Ala. It is so constructed that all the hot air and gases of the furnace are utilized directly in the drying of the lumber, while the flues are so arranged that there is no danger of the lumber being thed by sparks escaping from the furna-

A toy cap exploder has been patented by Mr. Henry M. Dixon, of New York city. Its construction is such that, in exploding a paper cap, a representation of a bird perched upon the toy will fall off as if shot, and the sparks will be prevented from flying about.

A rosin holder for violins has been patented by Mr. James W. Angus, of Macon City, Mo. It nets and armatures are made to open and close a dam lin, with spring jaws for holding the piece of rosin, whereby the rosin will be held in such a manner as to be at all times handy and convenient.

A ring holder for displaying rings to the best advantage has been patented by Mr. Max Eising, of New York city. It is a clamp made of sheet metal, with a slotted tongue, on one end of which a bow is formed, from which a bent tongue projects through the slotted tongue, and has a curved prong on its end.

A lock has been patented by Mr. William G. Mumma, of Warrensburg, Mo. It can be made right or left handed, and the case may be so arranged cheap lock for barns and outhouses.

A braid board has been patented by Mr. Charles E. Barnes, of Paterson, N. J. It is made of two flexible parts connected at the ends, so that the board or card of which it is made, and the braid wound thereon, may be opened out and placed upon a reel for convenience in unwinding the braid from the board.

A wheel fender for carriages has been It is a movable or rotatable fender for the forward wheels of vehicles, held to the carriage axle hy novel means, to prevent mud and dirt taken up the wheels from being thrown on the carriage or its occupants.

A money envelope has been patented

patented by Mr. Benjamin Lear, of Woodstock, Vt. It use is for supporting and holding horses' hoofs while parthe horse's leg is not twisted or strained, and the hoof

An adjustable seat has been patented by Mr. Manoah Miles, of Russell, Kansas. Two slotted upright end pieces have a swinging seat board hung between them, with a hinged wing and a cross rod or pivots, passed through notched curved slots in the uprights, making a seat which can be easily adjusted for a lounge, invalid chair, etc.

A gas pressure regulator has been patented by Mr. Robert F. Hatfield, of New York city. It is contained in a case holding water or other liquid, and is so made as to give notice, by the flaring of the lights, seal of the regulator,

A split gear has been patented by Mr. James Lawlor, of Fall River, Mass. Combined with a flanged hub are two or more wheel sections bolted on the flange, the sections having side recesses for receiving the flange, the wheel being readily fastened on or removed from a shaft without requiring the removal of other wheels and pulleys

A safety stirrup has been patented by Mr. Henry Coates, of Newark, N. J. It has a pivoted guard to prevent the foot from entering too far into the stirrup, the latter being made in one piece and the entire guard in one piece, avoiding the necessity of seve ral castings, while there is no need of a spring to hold the guard against the stirrup.

A bobbin for sewing machines has been patented by Mr. William W. Ford, of Elmira, N. Y. It has one loose head, with a spring to engage therewith and lock it closed on the barrel, to catch and hold the end of the thread on the bobbin preparatory to filling, and for afterward releasing the thread from its lock, saving time in filling, avoiding breakage, etc.

A telegraph insulator has been patented ing a sliding valve, there is a rod connected with the re-by Mr. Benjamin N. Deblieux, of Bay St. Louis, Miss. volving cylinder and the sliding valve, a sleeve sur- It is composed of two longitudinal sections placed together to form a joint in the middle and retaining the wire between them, with devices for holding the sections together, to support the line wire without wrapping or cutting, and altogether obviating a tie wire

> A bit fastening for bridles has been patented by Mr. Daniel Waters, of Wilkesbarre, Pa. This should investigate in choosing either a city or country invention consists of a bit ring on which is formed an home. It is not intended to be at all exhaustive, but annular recess, with a plate to which the bit wires are the hints which it contains, and the special points infastened, the plate being placed around the annular re- sisted upon, are calculated to give us healthier homes cess formed on the bit ring, to prevent rapid wear of ; and, as a happy corollary, a stronger people. the bit end.

An artist's sketch book has been patented by Mr. William T. Brundage, of Brooklyn, N. Y. Combined with an artist's box are socket pieces on one end and a palette fitting in the box having at one end hook clips fitting in the sockets, to hold the palette on the end of the box, so that the holding of the palette in the same hand with the box will be facilitated.

A comb attachment for shears has been patented by Mr. Daniel M. Young, of St. Louis, Mo. The scissors blade has screw-threaded apertures near its opposite ends, through which pass thumb screws, fastening the comb through similar apertures in the back of the latter, the comb thus attached serving as a guard and to regulate the length of cutting the hair

A vehicle axle has been patented by Mr. James I. McCalop, of Clinton, N. C. It has a cross slot in which is placed the tongue of the journal made separate from the main body of the axle, with other novel features, providing for adjusting the wheels upon the axle when worn at the hub, and at the same time main- given to veins and their formation, since in few mining taining them at the same distance apart

A combined overshoe and leggin has: been patented by Messrs. Henry Rudolph and Henry wenk, of Rico, Col. This invention covers novel details of construction and combination of parts for a shoe and leggin suitable for wear in cold mountainous districts, for warmth as well as for protection of the feet and ankles in a rough country.

An electric regulator for dampers has has been patented by Mr. Wilson E. Facer, of Clevelaud, O. Combined with a flue and its dampers, magconsists of a plate having lugs for holding it on the vio-lin, with spring jaws for holding the piece of rosin, for directing an electric current to automatically maintain any desired temperature for which the device may be set.

> A sash frame, holder, and casing for carriages, cars, and other uses has been patented by Mr. Albert Ayers, of Rahway, N. J. The casing has a curved groove with a "throw over" in the bottom of its throw over sash groove, and the sash frame has spring friction holders, the improvement being designed to keep sashes from rubbing or rattling, and to hold them firmly in position.

A ribbon and lace exhibitor and measthat it will serve for either a mortise or rim lock, all urer has been patented by Messrs. William B. Gleason parts being of cast iron except the springs, making a and Milo J. Harrington, of Albion, Pa. It consists of a drum or roller having an eccentric hub, while there is a reciprocating and swinging arm operated from the hub, and a counting wheel operated from the arm, ereby ribbons and lace may be measured automati cally as they are drawn from the holder.

A photographic printing frame has been patented by Mr. William H. Lewis, of New York city. It has one or more swiveling locking springs applied to its patented by Mr. James M. Todd, of Albert Lea, Minn. backboard and ears orlip pieces applied to the frame, to plete stock in U. S. Prices to meet times. Forsaith M. It is a movable or rotatable fender for the forward engage positively with the locking ends of the springs, Co., Manchester, N. H. the ears or catches being of a novel construction, and th whole calculated to allow of the progress of the printing being watched without danger of shifting the paper.

A polishing paper has been patented by by Mr. Patrick Scanlan, of Ida Grove, Iowa. It is of Mr. Robert J. White, of West New Brighton, N. Y. Unnovel construction, for the use of express companies sized paper is coated with a solution of rotten stone, carrying valuable packages, so that after it has been pumice, or other polishing substance by making a solutents without breaking the seals or cutting or tearing it cream, the paper being then dried, when the polishing material is mechanically held in the interstices of and A foot rest for shoeing horses has been on the surface of the paper in a form convenient for

A portable hay and cotton press has ing, shoeing, and clinching the nails and finishing, and been patented by Mr. Charles L. Barnard, of Byhalia, can be adjusted very easily to any desired height, while Miss. It is supported on wheels, so that it may be run into the field where it is to be used, and the front part of the press carries a windlass mechanism for operating the platen, the middle part being the press box proper, and the rear part being large enough to afford a space for placing hay or cotton, in which the follower reciprocates in forcing the material into the press box.

A telephone exchange forms the subject of a patent issued to Mr. William S. Ford, of Den. ics. Mathematics, and Physics, Architecture, Masonry, ver, Col. The invention consists of an apparatus for Steam Vessels, Mills, Limes, Mortars, Cements, etc. making connections on a switch board between a line strip and a connecting strip by means of a current acting upon the latter and another current operating electrical devices acting upon the line strip, these currents when the liquid needs replenishing, and shut off the being sent to the switch board from an operator's table gas before the liquid becomes so low as to break the | having upon it contact points in connection with the electrical devices at the switch board.

NEW BOOKS AND PUBLICATIONS.

CHEMICAL CONVERSION TABLES FOR USE IN THE ANALYSIS OF COMMERCIAL FERTILIZERS. By F. B. Dancy and H. B. Battle. Raleigh, N. C.: The Authors 1885 Authors, 1885.

These tables are intended to dispense with the neces sity of calculating the amount of any constituent in commercial fertilizers, from the weight of the precipitate obtained.

A GUIDE TO SANITARY HOUSE INSPEC-TION. By Wm. Paul Gerhard, C.E., New York: John Wiley & Sons, 1885.

It has been Mr. Gerhard's purpose, in writing this little book, to instruct the householder. The main features of sanitary house inspection are unfolded for his benefit, and are presented so briefly and so well that the scholar will find the perusal of his text-book a pleasure rather than a task. So many elements enter into the make-up of a truly healthy home that every housekeeper, no matter how thoughtful he may be will find a guide in this matter absolutely essential if the whole range of ongineering, mechanics, and physical the inspection is to be at all thorough. Ordinarily, science. Address Munn & Co., Publishers, New York. the examination of a house for either purchase or lease is limited entirely to visible qualities, and the points which really determine its healthfulness and desirability are lost sight of. Mr. Gerhard's book goes into a brief analysis of these features, and points out to the would-be tenant the chief matters which he

A SKETCH OF THE GEOLOGY OF CORN-WALL. By Brenton Symons. London: The *Mining Journal*, 1884.

Undoubtedly the most striking feature of Cornwall is its ancient mining industries, which have been in almost continuous operation since the days of adventurous Phœnicians. A Cornishman has become almost synonymous with a miner, so wide is the reputation of the country for its mining. Although so old a country, and so well explored, its geology is in some respects still quite obscure. A wide diversity of opinion exists among those naturalists who have given it careful study. In describing the geological features, therefore, Mr. Symons has put forward his own views tentatively, and avoided so far as possible adding to the causes of controversy. He gives an excellent account of the different formations and a full description of the chief mining districts into which the country is divided, with the principal minerals which are made the object of search. Considerable attention is countries'are the vein systems so complicated as in Cornwall, and probably in none have the theories offered in explanation been more absurd. The book is illustrated with a number of steel plates and a good geo logical map of the country.

Business and Personal.

The charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

Gold Fields

that pan out richly are not so abundant as in the early California days, but those who write to Hallett & Co., Portland, Maine. will, by return mail, receive, free, full information about work which they can do, and live at home, that will pay them from \$5 to \$25 per day, and up ward. Either sex, young or old. Capital not required; you are started in business free. Those who start at once are absolutely sure of snug little fortunes

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information, and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all, either by letter or in this department, each must take his turn.

Special Written Information on matters of personal rather than general interest, cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Minerals sent for examination should be distinctly marked or labeled.

(1) J. A. W. writes: I want an instrument to give the percent of sugarthere is in the crude juice of the sorghum cane. A. The determinations of the specific gravity by the hydrometer are approximatelycorrect; if these are unsatisfactory, you must use a polariscope. We should very much doubt the practicability of the other machine you mention.

(2) C. G. asks what to get to dissolve nlatinum. A. Platinum is soluble in aqua regia, a mixture of hydrochloric and nitric acids. It is not soluble in any single acid.

(3) F. B. P.-For how to remove mar-Hoswell's Engineer's Pocket-Book. By Charles H. ble stains, see Supplement, No. 129. For black enamel to apply on bicycles with a brush: Dissolve in about 2 pounds of tar oil, $\frac{1}{2}$ pound of asphaltum and a like quantity of pounded resin: mix hot in an iron kettle. care being taken to prevent any contact with the flame. When cold, the varnish is ready for use.

(4) F. M. Z. asks for a formula that will make tallow soap foam well. A. See "The Method of Making Soap," in Scientific American Supple-MENT, No. 494. Numerous receipts are there given for modern design. New Haven Mfg. Co., New Haven, Conn. | tallow soaps that "foam well,"
