ENGINEERING INVENTIONS.

A rotary engine has been patented by Mr. Karl A. Ekman, of Bofors, Sweden. This inven tion consists of a cylinder body having an 'liptical groove in which operate pistons fulcrumed on a revolv ing cylinder head, which is attached to the main shaft, carrying a disk valve, while there is a fixed cylinder head with inlet and outlet ports and an exhaust

A driving mechanism for suspended cars has been patented by Mr. John A. Enos, of Peabody, Mass. The supporting truck has wheels resting upon a single rail, combined with an electric motor, the revolving armature of which is rigidly fixed upon the same shaft as the wheels of the suspending truck, the current being taken from the lower rail and passed through the motor to the upper rail, the invention being DRS STARKEY & PALEN, 1529 Arch St., Philad'a, Pa. an improvement on former patented inventions of the DEAR SIRS: The article entitled "Another House-

MISCELLANEOUS INVENTIONS

A pumping apparatus for oil wells has been patented by Mr. David T. Lane, of Franklin, Pa. This invention covers a novel combination of parts and details, making an improved apparatus for operating a series of oil wells from a single driving mechanism

A dental plugger has been patented by Mr. Robert B. Kice, of Richmond, Mo. It consists of a dental engine with a hollow standard and an air pump the plugger being connected by a flexible tube, and the apparatus being so arranged that the force of the blow will be entirely under the control of the operator.

A banjo has been patented by Mr. Henry Hoseus, of Brooklyn, N. Y. Combined with the rim, head, and stick of a banjo is a wire ring, supporting brackets, regulating springs, and an adjusting screw, in a manner intended to increase the strength and clearness of tone of the instrument.

A powder puff has been patented by Mr. William H. Hudswell, of Brooklyn, N. Y. It is so made that the down will be prevented from being matted or felted by the weight of the puffs, and when the puff is applied to the powder the box cover is in place upon the box, so the dust will not be distributed around.

A log turner has been patented by Mr. Robison Shelbourne, of Blandville, Ky. This invention covers novel constructions and combinations, whereby, with devices acting automatically and under ready control, the work of turning logs on the mill carriage may be done by the machinery of the mill and without using cant hooks operated by hand.

A cloth beam for looms has been patented by Mesars. Harrison Underwood and Sharles Schweizer, of New York city. It is made in two corresponding semi-cylindrical parts, attachable to and detachable from a revolving shaft, and having an outer casing, the beam being to wind cloth upon as it is woven, and from which it is to be afterward removed.

A head protector for horses has been patented by Mr. Martin F. Corley, of La Salle, Ill. It is formed of felted fabric, having its sides notched, and with attaching cords, being so made as to soon take the shape of the horse's head, and retain and distribute moisture thereon without dripping, to protect horses from the effect of the sun's rays when desired.

A buckle has been patented by Mr. Nils J. Kiellstrom, of East Cambridge, Mass. It is a cam lever buckle, in which the plate on which the strap or sued a new catalogue, in which are many new and imband is to be pressed has on its upper surface a series of grooves, whereby a strap can be quickly clamped, the hold being more secure as any strain is increased, and the device being simple in construction.

A dough kneading machine has been patented by Mr. Joseph G. Tourangeau, of Quebec, ing it, a beater frame within the cylinder and shafts for address Munn & Co., Scientific American patent operating it, whereby the dough may be kneaded and the cylinder raised and rotated to discharge the dough.

A combined plumb, level, and rule has been patented by Mr. John Morrison, of St. Louis, Mo. The rule is made in hinged sections, with a graduated straight edge pivoted to one section, the tool being one which can be used for general measuring or conveniently adjusted for leveling and plumbing, while it can be folded to a size convenient for carrying in the pocket.

A fire escape has been patented by Mr. Daniel B. Kimball, of Syracuse, N. Y. It is portable. and comprises a suitable frame upon which is mounted a series of cog wheels and a clock escapement, to govern the speed of the escape belt from a drum, the belt having a suitable attachment by which a person may be supported while being lowered from a building.

A photographic camera has been patented by Messrs. William H. Lewis and Erastus B. Barker, of New York city. This invention covers novel parts connected with the camera box and bed section. over which the bellows portion of the camera works. also a novel detachable diaphragm for making stereo scopic pictures, and a means for securely holding the camera in its stand, and for its ready detachment.

A "swing back camera" has also been patented by Mr. William H. Lewis, the patent covering novel means of attaching the back, whereby it may be released and fastened on both sides of the camera by operating the fastening device from one side only of the instrument, thereby saving time and being much more convenient.

A secondary battery or accoumulator has been patented by Mr. James Pitkin, of Clerkenwell, Middlesex Co., Eng. The element is constructed of a central plate or support of metallic lead, against which the spongy lead or peroxide is held by perforated plates of ebonite, the lead plate having ribs cast on its faces which divide up the faces of the plate into cells into which the active material is packed, the object being to prevent the latter from becoming detached from the plate or support, and to avoid liability of short circuit-

Special.

"ANOTHER HOUSEHOLD NECESSITY."

In a recent number of this paper we published a re porter's interview with Mr. Joseph Wild, the venerable and estimable head of the firm of Joseph Wild & Co., of 82 and 84 Worth Street, New York, in which he related his experience in the use of the remedial agent known as "Compound Oxygen," administered by Drs. Starkey & Palen, of Philadelphia, which he heartily indorsed. An error in the heading of the article gave to Mr. Wild the credit of being the inventor of "Linoleum,' as the letter below will show, Mr. Wild hastens to dis-

JOSEPH WILD & CO. 82~&~84~WORTH~ST.~AND~11~&~13~THOMAS~ST.,

NEW YORK, May 13, 1896.

hold Necessity—Mr. Wild, the inventor of Linoleum, notes a discovery as valuable as his own," published in the SCIENTIFIC AMERICAN of May 8, is misleading, as stating that Mr. Joseph Wild was the inventor of Linoleum. It should have stated that Joseph Wild & Co., 82 & 84 Worth St., New York, are the owners of the patent in the United States and sole manufacturers of Linoleum in the United States. Please insert the above in the papers that have had the mistaken advertisement

Business and Personal.

servatory Domes, all sizes. Warner & Swasey, Cleve-Backward, turn backward, O Time in your flight,

Make me a child again, just for to-night, is the exclamation, in thought, of many a man who has suffered through a long life from some distressing disease, that he might have cured with a few bottles of medicine like Dr. Fierce's "Golden Medical Discovery," which cures all blood and skin diseases, as well as consumption or scrofula of the lungs. If he were "a child again," he would know enough to have a bottle of the Discovery "to-night," and in old age would not implore Father Time to "fly backward" for his special benefit. Hence, "Be wise to-day, 't is madness to defer." Get a bottle of the nearest druggist.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paidthereto. This is for ou information, and not for publication.

References to former articles or answers should give date of paper and page or number of question in quirles not answersed in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all, either by lette or in this department, each must take his turn.

Secial Written Information on matters or

or in this department, each must take his turn.

S eclal Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(1) B. A. W. asks: 1. Why are boilers tested with cold water and pump? A. Because it i convenient and safe. 2. Will a boiler be safe at mor pressure of steam than it was tested with by cold water A. No; it should not be used at more than 50 per cen of the test pressure. 3. Which is best-a square bo boiler or a cylindrical one? A. Cylindical boilers ar generally best, cheapest, and most durable. 4. Does tub of water weigh any more with a live ten pound fls init in suspension than with no fish in it? A. Weigh Advertisements must be received at publication office the same, provided the tub is brimming full in bot

> (2) A. C. desires a receipt for a preparation to restore the gloss of elegant bindings in different colors. A. Take of Canada balsam and clea white resin, of each six ounces, oil of turpentine 1 quart

(3) L. M. asks: Is there any cheap way of making white a straw hat which lostits whiteness from wear, and how do the straw hat makers bleac their hats, or the straw of which the hats are made A. The following receipt is a simple and inexpensiv one: Obtain a deep box, air tight if possible; place at the bottom a stone; on the stone a flat piece of iro red hot.or a pan of charcoal, on which scatter powdere brimstone; there should be hooks in the box on whic to hang the hat; close the lid, and let the hat remain a night. Another receipt for bleaching straw is t soak the goods in caustic soda and afterward to use o them chloride of lime or javelle water. The excess of chlorine should be removed by hyposulphite of sods called anti-chlor. In first method, the hat should b moistened, as a dry fabric will not bleach.

(4) N. N. C.—So-called paste diamond and other imitations of precious stones are made i much the sameway as glass. Cape May diamonds ar simply crystals of quartz cut and polished. Yellov stones are sometimes dipped in a dilute solution of antline violet to make them appear bluish white.

(5) L. O. K. asks: What rate of speed can I expect from a stern wheel pleasure boat 32 fee by 6 feet, two engines each 31/4 inches bore by 2 inches stroke, 150 pounds pressure. Draught of hull 1 inches, with sharp bow, well proportioned. Engine work direct (not geared). A. You will get a speed of 6 to 7 miles.
