ENGINEERING INVENTIONS.

A rail joint has been patented by Mr. Edward A. Temple, of Chariton, Iowa. This invention covers a novel construction, designed to prevent the battering of the end of the rail, and to do away with the ordinary form of bolt and nut, using instead a key or Wedge of wood or metal, or a combination of both.

A smoke consuming furnace has been patented by Mr. John L. Peslin, of Appleton, Wis. Its construction is such that the main fires, having been once started, are fed by partially coked coal, the smoke and gas generated during the process of partial coking being delivered beneath and forced to pass through the main fire of the furnace.

A car coupling has been patented by Mr. Joseph T. Hammick, of Rhinebeck, N.Y. The mouth of the drawhead is made very flaring, and has a rib just in front of the pin hole to guide the end of an entering link, with other novel features, intended to facilitate the automatic coupling of cars, the invention being an improvement on a former patented invention.

A stop block has been patented by Messrs. John P. and Joseph Goodman, of Plymouth, Pa. It is so made that the forward wheels of the car will be checked, without rocking or twisting of the axle, and so the stop blocks proper may be turned down to a position to constitute a portion or section of the tread of the rail in connection with which they are arranged.

AGRICULTURAL INVENTIONS.

A cultivator attachment has been patented by Mr. George W. Campbell, of Alamo, Ind. This invention relates to a construction wherein the shovels are adjustably connected to a leveler, and may be adjusted to any angle desired, to throw the earth to or from the crop being cultivated, and to make a deep or shallow furrow.

A corn harvester has been patented by Mr. Sylvester E. Ferguson, of Eureka Springs, Ark Combined with a frame and platform is an elevator and its driving mechanism, with receiving box, all so constructed as to remove the ears of corn from the stalks and deposit them in the receiving box as the machine is drawnalong the rows of corn, the stalks being left in the field. ...

MISCELLANEOUS INVENTIONS.

A harness pad machine has been patented by Mr. John W. Jones, of Glasco, Kan. It is a press intended to take the stretch entirely out of the leather before stuffing, to make a perfect shaped pad without wrinkles, while being readily adjustable for different styles and sizes of pads.

A music leaf turner has been patented by Mr. Thomas H. Garland, of Chicago, Ill. Combined with a rack, spindle, and series of swinging arms is a spring, and various other novel features, whereby the leaves of sheet music may be conveniently turned by a performer, or turned backward, as desired.

A velocipede has been patented by Mr. Charles W. Hamshaw, of Blue Springs, Mo. This invention covers a construction applicable to hand or foot power vehicles or to small boats, and combines with hand propelling mechanism means whereby the steering device may be controlled without the rider releasing his grasp upon the handles of the propelling mechanism.

An adjustable scaffold has been patented by Mr. Samuel Tucker, of Pleasanton, Kan. It is a construction for the use of carpenters, masons, etc., "so designed as to be easily adjustable as to height as the work progresses, by means of a windlass located upon the scaffold within reach of the mechanic, while the device is durable and not expensive.

A handle for cutlery and other articles has been patented by Mr. Joseph H. La Fave, of Miller's Falls, Mass. It is composed of a hollow metal shell and an outside covering of porcelain, the shell having a reduced inner end to receive a bolster over it, and one or more exterior flanges for support of the porcelain and engagement of it with the shell.

A mechanical telephone has been patented by Mr. Bloomfield L. Kenvon, of Lee Center, N. Y. Combined with a box holding rods, bars being secured to the rods and a diaphragm held by the bars, a wire is passed through an aperture in the diaphragm, and through a loop formed on the end of the wire a piece of wood is passed, which is held against the front of the diaphragm.

A floor cleaning machine has been patented by Mr. John F. Cameron, of New York city. It is adapted to be rolled along the floor, carrying water and operating scrubbing brushes, and so constructed that both the scrubbing brushes and a series of wipers will adjust themselves automatically to the floor, whether it be even or not, and an easy reciprocating motion is communicated from the drive wheel to the brushes.

A fence wire stretcher has been patented by Messrs. Clifton R. and Marshal E. Summers, of Stanberry, Mo. It is a simple and easily handled device, which can be conveniently attached to a fence post of any shape, to powerfully clamp and stretch barbed or plain wires or ribbons, and hold it tightly up to the faces of the posts until permanently fixed by staples or otherwise.

A candle burner has been patented by Mr. Hubert Bové, of New York city. It is preferably made of sheet metal, of a hollow conical shape, so made as to rest a: a shield upon the top of the candle, and prevent the sweating or running of the melted wax, sperm, or grease down the side of the candle, the shield itself descending by gravity with the burning of the candle.

A cutter head has been patented by Mr. William A. Woodroffe, of Mechum's River, Va. The cutter head has combined with it one or more oscillating or shifting cutters, intended to give better clearance for wood shapers having a rotary motion and capa ble of cutting in opposite directions of rotation, includ ing solid friezing and edging cutters and those for making mouldings and other ornamental work.

Business and Personal.

The charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

Engines and boilers, ½ to 4 H. P. Washburn Engine Co., Medina, O.

Wanted-Parties with capital to secure patents in this and foreign countries on a very sensitive and reliable Engine Governor, Address Geo, S. Agee, Burnham (Mill), Howell Co., Mo.

For Sale-The machinery, tools, plating apparatus, and raw material of a manufacturing establishment, now working on orders in brass and other metals. Very low rent, including steam power. Address Manufacturer, P. O. box 285, New Brunswick, N. J.

Inventors of Buttons and Button Machinery, address eo. E. Weaver, Providence, R. I.

Concrete Apparatus, etc. Ernest Ransome, S. F., Cal. The Knowles Steam Pump Works, 44 Washington | which the imitation can be detected. St., Boston, and 93 Liberty St., New York, have just is-sued a new catalogue, in which are many new and improved forms of Pumping Machinery of the single and duplex, steam and power type. This catalogue will be mailed free of charge on application.

Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J.

Machinery for Light Manufacturing on hand and built to order. E. E. Garvin & Co., 139 Center St., N. Y. A Catechism on the Locomotive. By M. N. Forney.

With 19 plates, 227 engravings, and 600 pages. \$2.50. Sent on receipt of the price by Munn & Co., 361 Broadway, New York.

Guild & Garrison's Steam Pump Works, Brooklyn, N. Y. Pumps for liquids, air, and gases. New catalogue now ready.

Nickel Plating .- Sole manufacturers cast nickel anodes, pure nickel salts, polishing compositions, etc. \$100 "Little Wonder." A perfect Electro Plating Machine. Sole manufacturers of the new Dip Lacquer Kristaline. Complete outfit for plating, etc. Hanson, Van Winkle & Co., Newark, N. J., and 92 and 94 Liberty St., New York.

Iron Planer, Lathe, Drill, and other machine tools of modern design. New Haven Mfg. Co., New Haven, Conn. Haswell's Engineer's Pocket-Book. By Charles H. Haswell, Civil, Marine, and Mechanical Engineer. Giv-ing Tables, Rules, and Formulas pertaining to Mechanics. Mathematics, and Physics. Architecture, Masonry, Steam Vessels, Mills, Lines, Mortars, Cements, etc. 50 pages, leather, pocket-book form, \$4.00. For sale by Munn & Co., 361 Broadway, New York.

Wrinkles and Recipes. Compiled from the SCIENTI FIC AMERICAN. A collection of practical suggestions, processes, and directions, for the Mechanic, Engineo, Farmer, and Housekeeper. With a Color Tempering Scale, and numerous wood engravings. Revised by Hof. Thurston and Vander Weyde, and Engineers Buel and Rose. 12mo, cloth, \$2.00. For sale by Munn & Co., 361 Broadway, New York.

Cutting-off Saw and Gaining Machine, and Wood Working Machinery. C. B. Rogers & Co., Norwich, Conn. Iron and Steel Wire, Wire Rope, Wire Rope Tramways. Trenton Iron Company, Trenton, N. J.

Send for catalogue of Scientific Books for sale by Munn & Co., 361 Broadway, N. Y. Free on application. See Burnham's turbine ad. to mill owners next week. Pat. Geared Scroll Chucks, with 3 pinions, sold at same ides, chiefly of iron. prices as common chucks by Cushman Chuck Co., Hart-

ford, Conn. The Improved Hydraulic Jacks, Punches, and Tube

Expanders. R. Dudgeon, 24 Columbia St., New York. Friction Clutch Pulleys. D. Frisbie & Co., N.Y. city.

Tight and Slack Barrel Machinery a specialty. John Greenwood & Co., Rochester, N.Y. See illus. adv., p.28.

gate not liable get out of order, and one that is ligh	t
and easily handled.	1

A shot cartridge has been patented by Mr. William E. Boyd, of Selma, Ala. In this cartridge the individual shot are connected together by wire, twine, a chain, or other suitable means, to limit the spread of shot or bullets after they leave the gun, the wire or twine, etc., being wound around the body of any light substance, such as as cork, pith, or paper, that will allow of easy detachment.

A buckle has been patented by Mr. Samuel J. Scovil, of Jamaica, N. Y. It is designed for put in place without stitching, and consists of a hollow frame and two right angled jaws or levers oppositely pivoted therein, the inner portions of the jaws being adapted to grasp the straps entered, one at each end of the frame

Catarrh Cured.

A clergyman, after years of suffering from that loathsome disease, catarrh, and vainly trying every known remedy. at last found a prescription which completely cured and saved him from death. Any sufferer from this dreadful disease sending a self-addressed stamped envelope to Dr. Lawrence, 212 East 9th St., New York, will receive the recipe free of charge.

Poverty and Distress.

That poverty which produces the greatest distress is not of the purse, but of the blood. Deprived of its richness, it becomes scant and watery, a condition termed anemia in medical writings. Given this condition, and scrofu-lous swellings and sores, general and nervous debility, loss of flesh and anDetite, weak lungs, throat disease. a cheap, practical, and convenient buckle, which can be spitting of blood, and consumption are among the common results. If you are a sufferer from thin, poor blood employ Dr. Pierce's "Golden Medical Discovery," which enriches the blood and cures these grave affections. Is more nutritive than cod liver oil, and is harmless in any condition of the system, yet powerful to cure. By druggista.

(8) J. E. J. W. writes : I made a "Norremberg doubler, according to directions given in C SCIENTIFIC AMERICAN of July 17, page 38, except that C I used 10 plates of common glass instead of the microscope cover glasses. The double proved to be a failure. What is the cause? A. The obvious trouble is that you substituted 10 pieces of window glass for 20 of cover glass. The doubler has been made in accordance with the description and has worked perfectly. You must not attempt to vary the construction without anticipating varying' results. 2. How should a swimmer catch a drowning person, in order to swim to the best advantage? A. He may take the drowning person on his back with his head, over his shoulder. 3. How should a drowning person catch a swimmer, in order to allow him (the swimmer) the free use of his limbs? A. The approved method is for the drowning person to keep behind the swimmer, with a hand on each hip of the latter. (9) F namo fo
