ENGINEERING INVENTIONS.

A car door fastener has been patented by Mr. Henry C. Singiser, of Mechanicsburg, Pa. This invention covers a novel form of construction intended to do away with all loose swinging attachments heretofore carried by the cardoor, and serves to hold the door tightly closed irrespective of the jogging or jolting of

A valve gear has been patented by Mr. Louis W. Bryan, of Quincy, Ill. It is an improvement especially designed for steam pumps, and the valves are so made as to be relieved from all pressure when they leave their seats, thereby balancing, so that only a slight spring is required to complete their stroke after being started.

A car coupling has been patented by Messrs. Thomas W. Talbot and J. Lueco Farmer, of Florence, S. C. It has two connected drawheads at rightangles to each other upon trunnions, whereby either drawhead may be presented as desired, one of them being constructed as athroat, with coupling hooks and locking devices, and the other as a projection adapted to fit into the mouth of the opposite drawbar.

MISCELLANEOUS INVENTIONS.

A semaphore signal has been patented by Mr. William Thornburgh, of Elyria, O. This invention covers improvements on a former patented inven tion of the same inventor, with the object of simplifying the mechanism for working the signal wings in such a manner that they occupy less space

An ash sifter has been patented by Mr. William T. Adams, of Baltimore, Md. It consists of a sifting cylinder in combination with a specially devised casing holding an ash box and a coal box, with various novel features, to promote convenience in construction and facility in use.

A horse collar has been patented by Mr. Robert M. Sears, of San Francisco, Cal. It consists in a soft, flexible collar, stiffened in the throat portion by a rigid curved bar, and having clips or hooks for receiving the hames, the collar being such as will readily adapt itself to the form of a horse's neck and shoulders.

A'composition for holding photographic paper on its support, etc., has been patented by Mr. Thos. C. Roche, of Brooklyn, N. Y. It is a tacky composition for holding sensitive paper during exposure in the camera, and consists of rubber, beeswax, pitch, and a solvent, prepared in a manner specified

A revolving sign has been patented by Mr. Alfred T. Fagerburg, of Bloomington, Ill. It has a supporting rod, with a head frame adapted to revolve on the rod, tappets on the frame, and bells pivoted to the rod with their stems in the path of the tappets, with other novel features, making a simple and inexpensive device for advertising purposes

A life preserving float has been patent ed by Mr. Frank Vaughan, of Elizabeth City, N. C. It consists of a case made usually cylindrical in cross section and bent into ring shape to encircle the body, being divided by partitions into independent air tighte partments, while there are recesses on oppositesides for the arms of the wearer.

A feed cutter has been patented by Mr. Adolph Hamacek, of Ahnapee, Wis. In front of the feed box are longitudinally ribbed feed rollers, and beyond these a presser roller or plate and cutters, with various novel features of construction and arrangement of parts, to facilitate the cutting of hay, straw, and similar material.

A saw table has been patented by Mr. Herbert J. Thompson, of Ogema, Wis. Combined with a carriage is a slide, an arm on the slide, and a block on the end of the arm, the block being on a line with a ledge on the end of the slide, the device being adapted for cutting off the sapwood and cutting out the knots of shingles, and making the edges straight.

A medical operating couch has been patented by Mr. Frederick W. Uhde, of Philadelphia, Pa. It has revolving screw rods, operated by a crank, so connected with its frame as to afford a mechanism by which the couch may be raised and lowered horizontally, or adjusted on an incline, or it may be adapted to serve as an ordinary lounge.

A combined truss and abdominal sup port has been patented by Mr. James A. Tigner, of Rome, Ga. This invention consists in the special construction of the support and truss, which is made to be held in position by a single belt passed around the body, thus avoiding the discomfort and liability to disment incident to strapping the truss to the limbs.

A cartridge loader has been patented by Mr. James V. Thompson, of Fort Madison, Iowa. The instrument is set upon a base plate, and consists of a standard with slotted upper end to receive the end of a lever arm, a plunger being connected to the lever, and tific subject, can have catalogue of contents of the Scither machine having a number of these plungers, varying in size to fit within shells of different calibers.

A dress protector has been patented by Jenny M. Haskell, of Greenwich, N. Y. It consists of a light, comfortable harness, of elastic and non-elastic straps, which can be readily applied to shields of thin waterproof material, shaped to fit next the skin, and protect garments from perspiration, to hold the shields in place and without discomfort to the wearer.

A spool holder has been patented by Mr. Benjamin F. Baker, of Fairville, New Brunswick, Canada. It consists of a wedge-shaped casing, with holders formed of spring wire, adapted to hold any desired number of spools of different lengths, the holder being in form convenient to hang up to unwind the thread for use in sewing.

A vapor fuel apparatus has been patented by Mr. Augustin I. Ambler, of Washington, D. C. This invention consists in novel constructions and combinations of parts, whereby the vaporizing of the petroleum or oil and mixture of the steam with it or its vapors is very perfectly and economically secured, the apparatus is readily controlled, and other advantages are obtained.

A baling press has been patented by Mr. George Ertel, of Quincy, Ill. It is a machine occupying very little ground space, and is adapted for the continuous formation of bales from below and their discharge from the top of the press, the present invention being an improvement on a former patent of the same inventor, intended to better the mechanism insuring the positive operation of the follower.

Mr. Marshall N. Gaines, of Dunedin, Fla. Combined with a fiexible conducting tube having a fiaring mouth and a suitable handle is a series of cushioned valves upon the ground or in a suitable receiver.

Business and Personal.

The charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

One Hundred Dollars Will Buy an entirely new invention of a useful and perfectly adjustable book holder, with patterns, etc., co

Mothers,

dress E. L. Turner, Box 1459, Providence, R. I.

do you not see the pallid face, once so bright, growing thinner? Do you not hear the hacking cough, and note the wasted, languid indifference, where once was mirth, brightness, and keen enjoyment for all the pleasures of life? Do not be mistaken or deceived. That child is dying of consumption—slowly, but surely. Yet thousands are living to-day who have been cured by the use of Dr. Pierce's "Golden Medical Discovery," which sur-passes all other medicines for the cure of that disease. Send ten cents for pamphlet and testimonials. Address World's Dispensary Medical Association, Buffalo, N. Y.

Wanted.-An experienced salesman would like to sell ewer pipe. A. E. Lander, Rochester, N. Y.

The Knowles Steam Pump Works, 44 Washington St., Boston, and 93 Liberty St., New York, have just issued a new catalogue, in which are many new and improved forms of Pumping Machinery of the single and duplex, steam and power type. This catalogue will be mailed free of charge on application.

Curtis Pressure Regulator and Steam Trap. See p. 142.

Wanted-A competent, sober, experienced engineer to take charge of the gas, water, and steam heating apparatus, and the machinery of a large hospital. Address, stating wages expected, "Engineer," P. O. Box 773, New

Presses & Dies, Ferracute Mach. Co., Bridgeton, N. J. Machinery for Light Manufacturing, on hand and built to order. E. E. Garvin & Co., 139 Center St., N. Y.

A Catechism on the Locomotive. By M. N. Forney. With 19 plates, 227 engravings, and 600 pages. \$2.50. Sent on receipt of the price by Munn & Co., 361 Broadway,

Guild & Garrison's Steam Pump Works, Brooklyn. N. Y. Pumps for liquids, air, and gases. New catalogue now ready

Nickel Plating.—Sole manufacturers cast nickel anodes, pure nickel salts, polishing compositions, etc. \$100
"Little Wonder." A perfect Electro Plating Machine.
Sole manufacturers of the new Dip Lacquer Kristaline. Complete outfit for plating, etc. Hanson, Van Winkle & Co., Newark, N. J., and 92 and 94 Liberty St., New York.

Haswell's Engineer's Pocket-Book. By Charles H. Haswell, Civil, Marine, and Mechanical Engineer. Giving Tables, Rules, and Formulas pertaining to Mechanics, Mathematics, and Physics, Architecture, Masonry, Steam Vessels, Mills, Limes, Mortars, Cements, etc. 900 leather, pocket-book form, \$4.00. For sale by pages, leather, pource some Munn & Co., 361 Broadway, New York.

Iron Planer, Lathe, Drill, and other machine tools of lern design. New Haven Mfg. Co., New Haven, Conn. Planing and Matching Machines. All kinds Wood Working Machinery. C. B. Rogers & Co., Norwich, Conn.

Nystrom's Mechanics.-- A pocket book of mechanics and engineering, containing a memorandum of facts and connection of practice and theory, by J. W. Nystrom, C.E., 18th edition, revised and greatly enlarged, plates, 12mo, roan tuck. Price, \$3.50. For sale by Munn & Co., 361 Broadway, New York city.

For Sale or to Work on Royalty-A Shutter Worker. covered by two patents. Address T. N. Tupton, Winchester, Va.

Send for catalogue of Scientific Books for sale by Munn & Co., 361 Broadway, N. Y. Free on application. Best Automatic Planer Knife Grinders. Pat. Face Plate Chuck Jaws. Am. Twist Drill Co., Meredith, N. H.

New Portable & Stationary Centering Chucks for rapid centering. Price list free. Cushman Chuck Co., Hartford,

The Improved Hydraulic Jacks, Punches, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

Supplement Catalogue.—Persons in pursuit of infor-The SUPPLEMENT contains lengthy articles embracing the whole range of engineering, mechanics, and physical science. Address Munn & Co., Publishers, New York.

Hoisting Engines. D. Frisbie & Co., New York city. Veneer Machines, with latest improvements. Farrel

Fdry. & Mach. Co., Ansonia, Conn. Send for circular. Tight and Slack Barrel Machinery a specialty. John Greenwood & Co., Rochester, N.Y. See illus. adv., p. 28.

Hercules Lacing and Superior Leather Belting made by Page Belting Co., Concord, N. H. See adv. page 30. If an invention has not been patented in the United

States for more than one year, it may still be patented in Canada, Cost for Canadian patent, \$40. Various other foreign patents may also be obtained. For instructions address Munn & Co., Scientific American patent agency, 361 Broadway, New York.

Brass and Iron Working Machinery, Die Sinkers, and Screw Machines. Warner & Swasey, Cleveland, O.

Grimshaw.-Steam Engine Catechism.-A series of thoroughly Practical Questions and Answers arranged so as to give to a Young Engineer just the information required to fit him for properly running an engine Robert Grimshaw. 18mo, cloth, \$1.00. For sale by Munn & Co., 361 Broadway, N. Y.

NEW BOOKS AND PUBLICATIONS.

CIRCULAR CURVES FOR RAILROADS. By John C. Trautwine, C.E. Twelfth Edition. & Sons, 1886.

Prepared originally by Mr. Trautwine in 1851 for the use of the younger members of the profession, the A fruit conveyer has been patented by popularity and usefulness of this complete treatisc on railroad curves has been amply demonstrated by the large sale it has reached and the frequent revision The study of curves of more than 180° has also been late years in the difficult engineering required by the Rocky Mountain topography. The description of the useful by those not thoroughly acquainted with the instrument. The tables of the trigonometrical functions are as perfectly reliable, we believe, as any published. The volume is attractively bound in leather, and will make a convenient pocket-book of reference.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters,

or no attention will be paid thereto. This is for our information, and not for publication.

References to former articles or answers should give date of paper and page or number of question.

In quirles not answered in reasonable time should be repeated; correspondents will bear in mind that

some answers require not a little research, and, though we endeavor to reply to all, either by letter or in this department, each must take his turn.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(1) T. H. S. asks what lightning proof fencing is. It is spoken of in your issue of July 17, in an article on "A New Mountain Observatory." A. A wire or metallic tence, grounded at frequent intervals, and provided with numerous projecting points, is practically lightning proof, and within a distance de pending on itsheight is lightning protective.

(2) E. L. writes: I desire to make a cheap pluviometer. I have a glass tube % of an inch in its short diameter, and do not know the proportionate scale to divide it, in order to mark the tenths, inches etc., of rainfall; the tube is 30 inches long. A. To construct a rain gauge, simply close the lower end of your tube with a cork, covered as inserted with melted sea ing wax. Then set it in an upright position away from ses, preferably on top of a post, and the direct reading will give you the rainfall. Or fit a tin funne to its top, and divide it, making the divisions large in the ratio of the squares of the diameters of the tub and funnel mouth. Thus, if the funnel is 3 inches then magnify the divisions in the ratio of 3^2 to 3^2 or as 9: 🚜=576 : 25 or 23 : 1 nearly.

(3) A. M. asks (1) if cylinder 36 inche long, 18 inches in diameter, ¼ inch thick, can be may netized, the cylinder to be under water. A. It can by sufficiently powerful current. 2. Would steel be bette than iron to make the cylinder with? A. If to be may netized permanently, it must be of steel. 3. Is the dynamo described in Supplement, No. 161, stron enough to magnetize it? If not, what is the best wa to magnetize and keep it magnetized? A. A muc larger dynamo or fifty to one hundred good cells woul be about right for magnetizing it.

(4) R. H. B. writes: Please inform m how extra porous carbon tubes are made for Jabloch koff's auto-accumulator, described in Scientifi AMERICAN SUPPLEMENT, No. 498. It says that the "are prepared from finely divided coke mixed wit other material, which will be de troyed in the bakin process, and leave the spaces occupied by it free to b penetrated by the atmosphere." What is the other material mixed with the coke, so as to leave the inter stice ^ A. The materials used in cementing coke due for battery carbons may be sugar sirup, coal tar, o other similar material. You will find strong sirup qui atisfactory, and cleaner to work with than tar.

(5) H. P. S. asks: 1. How can the scrap or shavings of the working of tortoise shell be utilized A. We know of no means by which they can be used mation of any special engineering, mechanical, or scienwire? A. Wire is heated and pr names printed placed in between the shell, and plainl legible from outside? A. The name is placed between thin plates of tortoise shell. 4. How can two pieces of shell be soldered together? I have seen new teeth po into a comb, and imperceptible; how is this done A. Use a pair of pincers or tongs, constructed so as reach 4 inches beyond the rivet; then have the tortois shell filed clean to a lap joint, carefully observing that there is no grease about it; wet the joint wit water, apply the pincers hot, following them wit water, and the shell will be joined as if it were or piece. The heat must not be so great as to burn th shell, therefore try it first on a piece of white pape 5. How to polish tortoise shell? A. Having scrape the work perfectly smooth and level, rub it with ver fine sandpaper or Dutch rushes; repeat the rubbin with a bit of felt dipped in very finely powdere charcoal with water, and, lastly, with rottenstone putty powder, and finish with a piece of soft was leather, damped with a little sweet oil; or still bette rub it with subnitrate of bismuth by the palm of the hane. 6. How can you soften tortoise shell, beside soaking in hot water? A. Use diluted sulphur acid; also see Spons' "Workshop Receipts."

(6) W. S. N. asks: 1. Where could I get THE FIELD PRACTICE OF LAYING OUT recipes for nutritious summer drinks? A. See "Effervescent Beverages," containing recipes for ginger beer. lemon beer, hop beer, and spruce beer. 2. The manner New York: John Wiley of preparing, and what part of the fish is used in making fish glue or isinglass? A. See "Glue and Gelatine, Pastes, Mucilages," etc., by F. Davidowsky, which we can send you for \$2.50.

(7) W. . W. asks how to melt old rubber, such as old rubber car springs and scraps, so as to be able to run it into moulds for new work. A. Heat which time has made necessary. Since the death of the India rubber with steam; the sulphur then disworking therein, and returnable by means of elastic or the author, it has fallen to the son to prepare this last charges, the India rubber melts, runs into the hot water other spring device to a horizontal position, the device edition. The methods of laying outcurves, of finding and collects at the bottom of the pot, while the vapor being applicable to all sizes of fruit, to discharge it their radii, and of calculating the elevation of the outer | prevents it burning. The properties of the India rub-upon the ground or in a suitable receiver.

The properties of the India rub-upon the ground or in a suitable receiver.

The properties of the India rub-upon the ground or in a suitable receiver. mass, liquid at the ordinary temperature, but drying in included, since their utility has been made evident of the air, and becoming then impervious to water. The material loses its elasticity, but is suitable for the preparation of gums or special varnishes for certain artiengineer's transit and its adjustments will be found cles. It cannot, however, be run into moulds for new work as you suggest. See description of "India Rubber Manufacture," in Scientific American Supplement, Nos. 249, 251, 252.

(8) W. H. C. desires a receipt for making genuine root beer. A. Take 1 oz. each of sassafras, allspice, yellow dock, and wintergreen, % oz. each of wild cherry bark and coriander, 1/4 oz. hops, and 3 qts. molasses. Pour sufficient boiling water on the ingredients and let them stand 24 hours, filter the liquor, and add ½ pint yeast, and it is ready for use in 24 hours.

TO INVENTORS.

An experience of forty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequaled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS
