

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information, and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all, either by letter or in this department, each must take his turn. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(1) W. C. H. writes: 1. About what is the air pressure on a window glass when the weather outside registers zero and temperature inside is at 100° Fah? How hot would it require to be for outdoor air pressure to break common window glass, say 24 by 36 inches? A. The difference in pressure due to difference in weight of air at temperatures given would be slight. It would not be possible to make such difference great enough to break the glass, but the difference in tension on the glass from variations of temperature sometimes causes breakage with comparatively small changes in the weather. 2. How is prepared glue made? A. See answer to query 14 in SCIENTIFIC AMERICAN of February 26. 3. What does the small letter "M" on the silver dollar denote? A. It is the initial of a die cutter, Morgan, and is on but few coins. Other letters on coins are known as mint marks; they are not on all coins, and not on those from the Philadelphia mint, which does the largest proportion of the coinage. "O" is the mark of the New Orleans mint, "S" that of the San Francisco mint, "C C" that of Carson City, etc. 4. What is the difference in speed of the travel of a rifle ball and sound? A. Sound in air travels at the rate of about 1,000 feet a second, the speed varying considerably with the volume or loudness of the sound. The velocity with which a ball leaves the rifle will vary from 1,500 up to 2,200 feet per second, according to the charge of powder, weight and shape of projectile, etc.

(2) H. J. D. asks (1) what cement to use when joining carbons to top of jar in a bichromate battery, by means of brass plate, so the acid will not ruin it. A. You may fasten the carbon by brass lugs secured by bolts and nuts; before doing this, the upper end of the carbon may be soaked in melted paraffine. Or, you may copper-plate the top of the carbon after the immersion in paraffine, and then dip into melted type metal. This gives a good bearing surface for the lugs, or they may be soldered to it. 2. How to keep brass bright after polishing it? A. Lacquer it with some approved lacquer. 3. What is the best material for soldering brass? A. A solution of chloride of zinc made by dissolving zinc to saturation in muriatic acid is generally used. The addition of a little sal ammoniac improves this. Lactic acid is also used.

(3) L. S. asks: 1. In the induction coil described in No. 160 of the SUPPLEMENT, what is the object in having bare copper wire in the secondary coil, and will not insulated copper wire give as good results? A. Bare copper wire is used to save space. Otherwise, covered wire will answer just as well. 2. Will the length of the spark be increased if the coil be made 2 or 3 inches larger, and a larger amount of wire in the secondary coil be used? A. The larger the core, the longer will the sparks be. 3. If made larger, would not three layers of No. 16 wire be better than two layers for the primary? A. Three layers might be advantageous if the coil was larger. 4. Is the coil dangerous, using 10 or 12 small bichromate potash cells, and will the effects of the coil increase with the battery power? A. The danger of using too high battery power is that the insulation will be injured, and its effects increased to a certain extent with increased battery. 5. Will common thick white wrapping paper do for between the tin foil in the condenser? A. For the condenser, you should use light paraffined paper.

(4) R. A. writes: Say there are two cable street car companies, A and B, and A puts down his road first, then B wants to cross A's line, how is it done without interference? A. A special device of two connected grips on a car, for this purpose, was illustrated in the SCIENTIFIC AMERICAN, vol. LIII., No. 11.

(5) E. J. M.—Copper, brass, or iron moulds are used for casting the valves, seats, and stuffing boxes of dry gas meters. Oiling is not necessary. If oiled to prevent sticking, the oil should be very thin put on with a brush. The composition is tin and antimony—5 parts tin, 3 parts antimony. Diaphragms should be as nearly alike as possible, and the diaphragm made to match the measure.

(6) J. A. P., York Corner, Me., asks: 1. Is there any cement or other method for sticking rubber to brass? A. Fuse together equal parts of gutta percha and pitch. Use hot. 2. Will rubber freeze so as to break? A. Rubber when exposed to undue cold loses its property of elasticity, and becomes stiff. See "Characteristics of Rubber," in SCIENTIFIC AMERICAN SUPPLEMENT, Nos. 249, 251, and 252.

(7) G. S., Ogdensburg, N. Y., asks (1) how to make percussion powder used in gun caps. A. 100 grains of fulminating mercury are triturated with a wooden muller, on marble, with 30 grains of water and 60 grains of gunpowder. This is sufficient for 400 caps. 2. A good flux for general soldering. A. Resin for tin, chloride of zinc and sal ammoniac for iron and brass.

(8) S. S. K. asks: 1. What is the enamel, and how is it baked, on bicycles? A. It is japan varnish made of gums and oil, and is baked in an oven heated to 300°. 2. What is the liquid enamel also used

for bicycles, but just applied with a brush, cold? A. Air-drying black varnish—ordinary carriage varnish mixed with lampblack.

(9) M. N., Newark, N. J., asks: How can I remove warts? A. Moisten the warts, and rub sal ammoniac well on them every night and morning.

(10) L. G. G. asks: 1. Is alcohol explosive? If so, under what circumstances? A. Alcohol evaporates at a comparatively low heat, and gives off an inflammable vapor. This suddenly lighting sometimes produces a slight explosion; a mixture of this vapor and air is explosive. 2. Is there danger in using an alcohol lamp, and if so, under what circumstances? A. The danger in using an alcohol lamp is that the vapor of alcohol may inflame. A good fitting wick tube, and a low temperature in the body of the lamp, are the conditions of safety. 3. Is wine or grain alcohol more or less dangerous than wood alcohol? A. Wood alcohol evaporates at a lower temperature than ordinary alcohol, and hence is more dangerous. 4. Is wood alcohol as good to use in a lamp for soldering as grain alcohol? A. It is not as good, as it will give a less quantity of heat per gallon. 5. What are the objections, if any, to wood alcohol for such purposes? A. The very disagreeable odor and the greater danger are the objections. 6. What is the cost of grain alcohol, and what is the cost of wood alcohol? A. Grain alcohol, 95 per cent, \$2.30 per gallon; wood alcohol, \$1.25 per gallon. 7. What class of tradesmen sell wood alcohol? A. Dealers in chemicals, and also special houses.

(11) E. N. A. asks: Will you please answer in your paper whether the playing of a mouth instrument spoils the voice for singing? A. The question is still undecided. 2. Is wood engraving a good trade, and are there many in it? A. Wood engraving is a good trade, except that it is gradually being displaced by process work.

(12) F. A. B. asks if water has any more attraction than land for a bullet or stone being fired over it, and what that attraction is. A. Water has less attraction, owing to its lower specific gravity. The difference is very slight for existing conditions of land or sea.

(13) D. N. G. asks whether plaster of Paris will stand more heat than iron. A. Plaster of Paris, when set, will stand very little heat; far less than iron.

(14) D. A. writes: Will you please give me a good prescription, through your valuable issue, for a person who has lost considerable flesh and strength. I have no disease of any kind, but still I am very weak. A. Consult a physician. Try a good emulsion of cod liver oil if you can take it.

(15) H. G. H. asks: What is the difference between the British quart and the American quart? A quart of water in England weighs 20 ounces, I believe. What does it weigh here? A. The Imperial pint contains 24 659 cubic inches, its contents in distilled water weighing 8,750 grains. The American pint contains 23 8 cubic inches, weighing in distilled water 7,291 1/2 grains. The Troy ounce contains 480 grains, the avoirdupois 437 1/4. The Imperial pint contains 20, the American a little over 18 ounces, avoirdupois.

(16) B. M. asks: What is an arpent in dimensions? A. The arpent was an old measure for land. It had different values. An arpent by one standard was equal to five-sixths English acre.

(17) J. W. P. says: We are frequently troubled in our press room by paper sticking together, both in feeding and in straightening, which makes it difficult to handle. Will you please give cause for this peculiar phenomena, and remedy to prevent it? A. Your trouble is caused by electricity. If you print your paper dry, you might try wetting the edges of the paper with a sponge. If that does not remedy the difficulty, take a sheet of Manila paper, oil it thoroughly, and use it as an offset sheet.

(18) T. W. asks: 1. In an electro-magnet, what is the relation between its attractive force and the size of the coils? A. No clear statement of any law can be given, as so many other factors enter into the problem. 2. What size wire will give best results in an electric bell (local), and how large should coils be? A. You will find No. 20 or 24 wire will work well, 1/2 to 3/4 pound in quantity. 3. What is the difference between an electric and a magneto-electric bell? A. There need be no difference.

(19) A. J. K. asks: 1. Please give me directions for making platinum prints, spoken of in some books on photography. A. Platinum prints are the subject of a patent. Address in reference thereto Wilson Hood & Co., 910 Arch Street, or Thomas H. McCollin, 635 Arch Street, Philadelphia. 2. How can I stain wood so as to make it look like cherry? A. Try following:

- Alkanet root 15 grains.
Aloes 30 "
Dragon's blood powdered 30 "
95 per cent alcohol 500 "

Mix and let stand in a tightly corked bottle some days. Go over the wood with dilute (1 in 10) nitric acid first. This is pretty dark. You may lighten by using more alcohol. 3. What can I put on a laboratory table made of wood to prevent it from being stained and eaten by acids or alkalis? A. Try silicate or slate paint, such as sold for blackboards.

(20) L. W. writes: I noticed in a silver plating works some time since that the platers dip their wares in a solution to clean and take off the tarnish. They claim it is a solution of cyanide of potassium. Can you give me receipt for this solution, and how to clean the ware? A. A hot solution of cyanide of potassium is used as a dip for articles that have been a few minutes in the electro-plating bath. For full information as to the preliminary cleaning, scouring, pickling, and amalgamating of the articles, we refer you to Fontaine's Electrolysis, \$3.50, also Watt's Electro-Metallurgy, price \$5.00. These are the best books on the subject. One process is the following: A solution of 1 caustic soda in 10 water is first used; next 1 sulphuric

acid in 10 water; after rinsing, a solution of 10 nitric acid (36°), 200 salt, and 200 water is used; next 60 nitric acid, 200 sulphuric, and 200 water. To amalgamate, a dilute solution of nitrate of mercury may be used. These solutions are for dips. The articles are immersed in them and rinsed off between the applications.

(21) F. H. M. writes: Will you please give the method of solving the following problem: A man has a board ten feet long, which is two feet wide at one end and from that tapers to a width of one foot at the opposite end. Where shall he cut it at right angles with the center line, to give an equal area in each section? A. The area of the whole piece is found by multiplying its mean diameter by its length: 1 + 2 = 3. 3 x 10 = 30 square feet. It is to be cut into two pieces, each of an area of 15 square feet. Let us take the section at the smaller end. Its small end will be 1 foot across; call its length x. Then, as the board tapers in width one in ten, the large end of the section will measure 1 + 1/10 x. The mean width will be: 1 + (1 + 1/10 x) = 2 + 1/10 x.

This mean width multiplied by the length, x, will give the area, which by the conditions of the problem must be 15. This gives us the equation:

(1) (2 + 1/10 x) x = 15.
which solved gives us x = 5.8110 + or 5 feet 9 3/4 inches, or the board must be cut at that distance from the narrow end.

(22) N. S. C. writes asking (1) the rate of expansion or contraction of ice. A. 1000 volumes of ice at 32° Fah. contract to 997 1/2 volumes at -4° Fah. Also see SUPPLEMENT, No. 574, for recent determinations. 2. Also for a cement for bisulphide of carbon prisms. A. For prisms use fish glue with a little glycerine.

(23) A. F. O. writes: Cooling water begins to expand at 39°, and continues to expand till frozen. Does the resulting ice continue to expand by further reduction in temperature? What are the relative volumes of ice at lower temperature? A. See answer to No. 22.

TO INVENTORS.

An experience of forty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

March 8 1887

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

Alarm, See Fire alarm.
Amalgamator, F. A. Huntington..... 359,155
Animal trap, P. E. Erling..... 359,924
Animal trap, W. P. White..... 359,237
Annunciator, A. D. Blodgett..... 359,051
Armature and process of and apparatus for forming the same, C. G. Curtis et al..... 359,205
Asbestos, manufacture of hardened, C. Jackson.. 359,156
Axle box, car, C. Mendenhall..... 358,872
Axle boxes from solid stock, manufacture of, W. C. Dalzell..... 359,138
Axle, cultivator, L. Braden..... 358,917
Bag, See Traveling bag.
Bag frames, fixture for, W. Roemer..... 358,987
Bag or pocketbook frames, fastening for, C. Blust..... 358,958
Bag or satchel, J. Brown..... 359,201
Bag or valise frame, W. Roemer..... 358,988
Baling press, E. C. Sooy..... 358,896
Baling press, J. R. Webster..... 358,902
Bar, See Watch chain bar.
Barometer, J. C. Butler..... 359,057
Basket, wooden, T. L. Lee..... 359,082
Bath tub, basin, etc., J. Morrison..... 359,169
Battery, See Galvanic battery. Secondary battery.
Bayonet attachment, J. N. W. Wilson..... 358,911
Beehive, S. G. Edwards..... 358,850
Bell, electric, E. A. Wildt..... 358,910
Belt lace guard, W. D. Scott..... 358,944
Bench, See Wash bench.
Bicycle, J. Brusele..... 359,127
Bicycles, wheel attachment for, J. Brusle..... 359,128
Billiard ball, G. E. Phelan..... 359,082
Billiard table cushion, G. E. Phelan..... 359,081
Binder, temporary, E. C. Fales..... 359,141
Blind switch, J. McKenna..... 359,088
Block, See Building block.
Boiler furnace, steam, Z. T. Reno..... 359,084
Bolt releasing device, electric, G. L. Henzel..... 358,975
Book holder, G. S. Richmond, Jr..... 359,180
Book rest, A. C. Brower..... 359,056
Boots or shoes, inner sole for, C. W. King..... 358,800
Box, See Axle box.
Brake, See Car brake. Power brake.
Bridle, V. C. Collet..... 359,060
Brush, etc., cleaning, H. J. Nichols..... 358,875
Brush, scrubbing, Chamberla & Lamb..... 359,129
Bucket or pail cover, S. J. T. S. D. Porter..... 359,228
Buckle for razor straps, T. A. Kochs..... 358,861
Buckle, suspender, W. E. Smith..... 359,185
Building block, S. D. Castleman..... 358,837
Bundle carrier, Kennedy & Stewart..... 358,964
Burner, See Gas burner. Lamp burner. Vapor burner.
Bustle, A. Alphanab..... 358,914
Bustle, T. P. Taylor..... 358,231, 359,232

Button or stud, F. W. Richards..... 358,882
Cable crossing, Leiby & Baitinger, Jr..... 359,083
Camera, See Photographic camera.
Can, See Oiling can.
Can stopper, C. Bopp..... 358,969
Car brake, P. W. Reinschagen..... 358,179
Car brake, A. A. St. Clair..... 358,948
Car brake and starter, H. Hansen..... 359,152
Car brake, automatic, A. P. Massey..... 358,887
Car brake lever, J. S. Whitworth..... 358,907
Car brake, railway, W. E. Maultby..... 358,868
Car coupling, J. S. Andrews..... 358,896
Car coupling, J. Hill..... 359,075
Car coupling, G. R. Mavis..... 359,094
Car coupling, A. S. Neal..... 359,092
Car coupling, F. Zedler..... 359,047
Car heater, W. C. Dunn..... 359,206
Car seat, U. C. Smith..... 359,086
Car starter, J. M. Ertz..... 359,013
Car starter, L. H. Wilson..... 358,999
Car wheel, G. Peacock..... 359,174
Car wheel, S. W. Tanner..... 358,951
Cars, transfer float for railway, W. Hord..... 359,077
Cards, support for picture, W. Hagelberg..... 359,150
Carrier, See Bundle carrier. Cash carrier.
Cartridge extracting implement, C. R. Hart..... 358,928
Carts, thill equalizer for road, J. Percy..... 358,876
Cash carrier, J. Starr..... 359,087
Casks, tap valve and tapper for, R. Teichmann..... 359,039
Casting apparatus, pipe, D. Giles..... 358,927
Casting printers' leads and small furniture, mould for, G. F. Kimball..... 359,021
Chain bar, watch, H. M. Herring..... 358,866
Chain, drive, W. J. Perkins..... 359,029
Chain, wire, R. A. Breul..... 359,054
Chuck, S. B. Ardrey..... 358,936
Churn dasher, mechanism for operating, J. M. Flack..... 359,145
Cider mill, G. W. Sanor..... 358,989
Clinker stand, N. Kohler..... 358,935
Clamp, See Mail bag clamp.
Clip, See Vehicle gear clip.
Clock, J. Pallweber..... 359,227
Clock winding mechanism, A. F. Valon..... 358,997
Closet, See Water closet.
Clothes line stay, C. E. McDonald..... 359,025
Clothes rack, J. S. Marsh..... 359,022
Coat sleeve, J. C. Bolen..... 359,052
Coatings surfaces, apparatus for, A. Edwards..... 358,843
Cock, ball, J. Clifford..... 359,059
Cockle separator, J. A. Lacey..... 359,162
Collar, horse, S. B. Davis..... 359,139
Collar, horse, F. Hays..... 358,856
Collar pad, horse, J. G. Egbertson..... 358,851
Coloring matter, production of mixed azo, C. A. Martius..... 358,886
Colters, making plow, J. G. Bailey..... 358,838
Concentrator, C. W. Joy..... 359,020
Concrete under water, laying, J. G. Goodridge, Jr. 358,888
Conveyer for grain, ore, coal, or earth, L. D. Howard..... 359,154
Cooker, food, S. E. Robinson..... 359,229
Copying apparatus, letter, W. Zimmerman..... 358,954
Corset, G. D. Nichols..... 359,225
Corset stiffener, C. W. Firmhaber..... 359,015
Coupling, See Car coupling. Thill coupling. Whiffletree coupling.
Crematory, M. L. Davis..... 359,138
Cross tie, W. Wharton, Jr..... 359,115
Cushion, See Billiard table cushion.
Cutting double pile fabrics, mechanism for, A. Bacon..... 359,048
Decorticating machine, J. B. Vogel..... 359,197
Delivering prepaid articles, automatic apparatus for, F. M. Leavitt..... 359,213
Desk, E. W. Sackett..... 358,887
Digger, See Potato digger.
Distance instrument, R. R. Gurley..... 359,073
Door check, J. E. Carr..... 359,202
Door check, J. Merredith..... 359,223
Door hanger, Nickel & Zattan..... 359,226
Dowels, machine for making, A. J. Curtis..... 358,966
Draught equalizer, M. N. & W. B. Drake..... 359,085
Draught equalizer, A. Sellers..... 358,891
Dress lamp shades, making, Stonehill & Kilsheimer..... 359,088
Drier, See Grain drier.
Drill, See Rock drill.
Dust pan, H. J. Vogel..... 359,111
Earring, L. F. Brooks..... 358,833
Eaves trough, J. Krueger..... 358,936
Electric regulator, O. B. Shallenberger..... 359,104
Engine, See Locomotive engine. Portable engine. Steam engine.
Engine governing device, F. H. Ball..... 358,829
Envelope or paper bag, D. Dalziel..... 359,187
Envelope, reversible sample, G. Doutney..... 358,907
Eraser, fluid ink, J. W. Tallmadge..... 358,901
Exhibiting apparatus, W. T. Smith..... 358,897
Expansion wheel, A. A. Rose..... 359,038
Eyeglass or spectacle frame, D. O'Hara..... 359,178
Fabric, See Ornamental fabric.
Fan attachment, P. Murray, Jr. (r)..... 359,215
Feed water trap, steam, H. Creamer..... 358,964
Fence post, McEwen & Lawrence..... 359,167
Fence, wire, S. P. Etter..... 358,862
Fencing, barbed metallic, B. F. Randall..... 359,173
File, letter and bill, E. C. McVay..... 358,870
Fire alarm, F. G. Lyon..... 358,864
Firearm, W. F. Aiston..... 358,915
Fire engine heater connection, J. J. Meyrick..... 358,875
Fishing rod, E. Horton..... 359,153
Flatiron stand, Crommer & Phillips..... 359,204
Flaxseed separator, Welker & Kiffe..... 359,044
Folding gate or door, A. Bataille..... 358,956
Folding table, M. C. Bullock..... 358,833
Forging hammers, mechanism for, H. H. Warren..... 359,113
Forging shifting rails, die for, J. M. Davidson..... 358,866
Fountain, See Wash boiler fountain.
Frame, See Bag and valise frame. Eyeglass or spectacle frame. Spectacle frame.
Fruit gatherer, J. Honecker..... 359,211
Furnace, See Boiler furnace.
Furnace door opener and closer, Joyner & Petesch..... 358,977
Furnace for smelting and reducing metals from minerals, R. Bonehill..... 359,199
Furnace grate, L. M. Woodcock..... 359,120
Galley and proof press, combined multiple, J. Henry..... 358,857
Galvanic battery, H. J. Brewer..... 359,056
Galvanic battery, L. A. W. Desruelles..... 359,063
Gas lighting apparatus, electric, C. B. Bosworth..... 359,065
Gas pipes, apparatus for detecting leaks in, W. A. Stern..... 358,949
Gas regulator for boilers, T. J. Kleley..... 359,079
Gases, apparatus for automatically testing mine, T. Shaw..... 359,102
Gate, See Folding gate. Railway crossing gate.
Gearing, adjustable, L. P. Hoyt..... 358,980
Generator, See Steam generator.
Glass, machinery for the manufacture of sheets of rippled, W. E. Chance..... 359,128

Glycerine from fats, separation of, R. Giebermann 359,148
Governor, steam engine, R. M. Beck 359,006
Grain binder, C. Colahan 358,930
Grain binder, Colahan & Rosback 358,921
Grain binders, but detainer for, W. N. Whiteley 359,118
Grain drier, J. C. Bates 358,830
Grindstones and frames thereof, mechanism for hanging and centering, Childs & Smith (r) 10,813
Grindstones, tool holder for, J. R. Hamilton 359,151
Guard. See Belt lace guard.
Guitar bridge, G. B. Durkee 358,847
Harrow, J. M. Childs 358,839
Harrow or cultivator teeth, device for securing, D. McKenzie 358,869
Harrow, spring tooth, L. Sweet 358,950
Harrow, wheel, M. Chandler 358,838
Harvester and binder, C. Colahan 358,922
Hats or caps and making the same, sweat band for, C. F. Kessler 358,859
Hay knife, M. M. Bartlett 359,124
Hay press, W. A. Laidlaw 359,081
Hay stacker, F. O. McGill 358,937
Heat regulator, M. W. Baily 359,002
Heater. See Car heater. Water heater.
Hoisting apparatus, L. Severns 359,182
Holder. See Book holder. Necktie holder.
Hook. See Wardrobe hook.
Hoops for barrels, etc., machine for splicing wire, J. H. Bard 359,004
Horseshoe, Smith & McArthur 359,104
Horseshoe nail finishing machine, J. P. Wennersten 358,904
Hose, G. Meacom 359,222
Hose reel, R. D. Wirt 358,953
Indicator. See Station indicator. Stock indicator.
Inkstand, R. Lockwood 358,214
Ironing machine, J. C. Crawford et al 359,135
Ironing machine, J. C. Poland 359,085
Jack. See Lifting jack.
Joint. See Rail joint. Railway rail joint.
Jute, ramie, etc., from the stalk, machine for separating, A. Angell 358,827
Knife. See Hay knife.
Knitting machine, A. Reichert 358,881
Knitting machine, circular, J. H. Place 358,988
Knitting machine, circular, Sullivan & Graham 358,900
Ladder, step, S. S. Staring 359,186
Lamp burner, F. R. Baker 359,122
Lamp burner, H. E. Shaffer 358,892
Lamp, electric arc, McDill & Gaston 359,221
Lamp extinguisher, F. R. Baker 359,123
Lantern globe and reflector, C. J. Higgins (r) 10,814
Lathe, Seessle & Leiman 358,945
Leather scrap splitting machine, C. E. Roberts 358,883

Wine, champagne, Wachter & Co 14,136

A Printed copy of the specifications and drawing of any patent in the foregoing list, also of any patent issued since 1866, will be furnished from this office for 25 cents. In ordering please state the number and date of the patent desired, and remit to Munn & Co., 361 Broadway, New York. We also furnish copies of patents granted prior to 1866; but at increased cost, as the specifications, not being printed, must be copied by hand.
Canadian Patents may now be obtained by the inventors for any of the inventions named in the foregoing list, provided they are simple at a cost of \$40 each. If complicated, the cost will be a little more. For full instructions address Munn & Co., 361 Broadway, New York. Other foreign patents may also be obtained.

Advertisements.

Inside Page, each insertion - - - 75 cents a line.
Back Page, each insertion - - - \$1.00 a line.
The above are charges per agate line—about eight words per line. This notice shows the width of the line, and is set in agate type. Engravings may head advertisements at the same rate per agate line, by measurement, as the letter press. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

SEBASTIAN, MAY & CO'S
Improved Screw Cutting
LATHES Foot & Power
\$60.
Drill Presses, Chucks, Drills, Dogs, and machinists' and amateurs' outfits. Lathes on trial. Catalogues mailed on application.
165 W. 2d St., Cincinnati, O.
