tect，and has developed a special device of his own of
this kind，naturally argues strongly in favor of his own device．

## The Conversion of Heat into Work． By William Anderson．London Whittaker \＆Co．New York：D． Van Nostrand．

The simple and direct but extremely interesting way in which an ordinarily complicated subject is here pre
sented will donbtless render this book of exceptional value to young mechanics who know little of the theo－ retical side of their business，and to other students who have to＂dig out＂their education from books，without the aid of teachers．Although now published as a practical handbook．on heat engines，it contains but little matter in addition to that which appeared in the original form in which it was published，as lectures hefore the Society of Arts and Manufactures，London， which were printed in six successive numbers of the
Scientific American Supplement in the latter part Scientin
of 1885.
A History of Salt Lake City and its
Founders．Salt Lake City，Utah：
Ed ward W．Tullidge．
This is a handsome octavo volume of nearly 1,100 pages，profusely illustrated with fine steel engravings
of the princtpal Mormon notables from 1840 to the of the princtpal Mormon notables from 1840 to the
present time，with biographical sketches．It is in fact present time，with biographical sketches．It is in fact
a history of Mormonism and its growth and develop． ment in Utah，written by＂authority of the Council and ander supervision of its Committee on Revision，＂，and therefore giving a picture of Mormonism in the most favorable light in which it is possible to present the institution to the public．There are too many outside evidences of material prosperity and thrift everywhere
to be seen in the resourceful valley where the Mormon to be seen in the resourceful valley where the Mormon
emigrants from Illinois and Missouri began to make emigrants from Illinois and Missouri began to make
their home in July，1847，and the vitality of the com－ munity has been too plainly manifested on many oc－ hat the＂Mormon question＂，as it is called，is still on of no insignificant importance．It is no part of our purpose to discuss the matter，but just why and how it has become of such material significance is probably
more fuily explained inthis volume than in any other

## ne work published．

The British Guiana Directory for 1887， published by C．K．Jardine，Demerara，cannot fail to be turers as are seeking to extend trade in that exceedingly fertile and resourceful tract of 600,000 square miles lying just under the equator，on the northeast coast of South
America．The book，gives full details of all depart ments of the little government，with classified director for the principal trades in different cities，the promi nent country estates，etc．
＊＊Any of the above books may be purchased through this office．Send for new catalogue just pub
lished．Address Munn \＆Co．， 361 Broadway，N．Y．

## 

HINTS TO CORRESPONDENTS．

| Names and Address must accompany all letters， or no attention will be paid thereto．This is for our information，and not for publication． <br> References to former articles or answers should give date of paper and phee or number of question． be repeated；correspondents will bear in mind that some answers require not a little research，and， though we endeavor to reply to hll，either by <br> Special Written Information on matters of personal rather than general interest sannot be expected without remuneration． <br> Scientific American Nupplenuents referred to may be had at the oftice．Price 10 cents each． <br> Books referred to promptly supplied on receipt of price． <br> Minerale sent forexamination should be distinctly |

（1）W．M．L．writes ：1．In building an eight light dynamo as illustrated in Scientific Ameri can，April 23 and 30 ，can I substitute brass instead of
bronze for making sleeve A，flange B，and cylinder E， Fig． 6 （Scientific American，April 30），also for yoke－ holding shaft，or only make cylinder E of bronze and
the rest of brass．A．Brass may be used，but bronze is preferred on account of its hardness and durability． Does it make any difference in the winding of the field magnet whether I wind both posts right or left handed， or should they be wound different？A．Wind so that
if placed endways the direction would be uniform． Both must be wound either right or left handed． 3 ． How can I attach machine to wooden base？A．Dril
and tap the polar extremities，and insert tap bolt through the wooden base．4．What is the best wood to use for the armature core？A．Well seasoned mahogany or maple．5．What are the wedges made of that are
use for dividing the coils on the armature？A．Hard rubber，vulcanized flber，hard wood，or bone．
（2）R．T．asks ：In regard to pumping cold water into a boiler when the water is low and the flues heated，is it not the gas that is generated in com－
ing in contact with the hot iron that causes an explo－ ing in contact with the hot iron that causes an explo－
sion？A．It is dangerous to pump cold or hot water into a boiler with the line of water below the top flues at such times the flues out of water may become red
hot，as also the sides of the boiler above the water． Pumping up the boiler at such times largely increases the generation of steam，possibly carrying the pren－
sure up to the point of rupture．The theory that ex－ plosions are thus caused by gas formation is in no way sustained．
（3）C．H．D．\＆Co．ask the ingredi－ ents of a solution in which to steep burlap or jute bags in order to make them more durable when used for trans A．Plange the bagging into a solution，at $142^{\circ}$ Fah and leave for an hour．the solution consisting of
sulphate of alumina $21 / 4$ pounds，water $53 / 2$ gallons，an
borate of lime 234 pounds．The borate of lime is added
after the sulphate of alumina has dissolved，and the whole decanted when settled．After taking out of this bath，the textiles are put into a second bath，composed
of $21 /$ pounds resinous soap and $24 /$ pounds Marseilles soap dissolved in 536 gallons water and carried to the boiling point．At the end of ten minutes the bags are allowed to drip，are nest dried，and then rewashed and dried．Bagging made in this way，it
sist the action of acids or chemicals．
（4）E．T．H．asks how to make a ma－ hogany stain for wood，and a varnish to coat it to re
present a polish．A．The following is a dark stain． Boil $1 / 2$ pound of madder and 2 ounces logwood chips in a gallon of water，and brush over while hot；when drachms to the quart．Or put 2 ounces dragon＇s blood， bruised，into a quart of oil of turpentine，let the bottle stand in a warm place，shake frequently，and when dissolved，steep the work iu the mixture．To polish， take a piece of pumice stone and water，and pass re－
peatedly over the work until the rising of the grain is peatedly over the work until the rising of the grain is
cut down．Then take powdered tripoli and boiled lin ed oil，and polish the work to a bright surface
（5）H．W．F．asks ：1．What cement， ther liquidor otherwise，can I use to mend china so as
hold hot substances，and the cement to be transparent or hold hot substances，and the cement to be transparent
white？A．See article on cements in Scientific American Supplement，No．158，for this information How is fak finished as＂antique oak＂？Is it possi
ble to $⿻$ s．over oak furniture so that it will be antiques A．By intensifying the stain，the oak can be made to re－ 3ymble the antique article．New furniture restained as that appearance．3．What is the cause of the gapes＂in chickens，etc．，and what can be used to pre－ ent and cure it？A．Camphor pills，it is said，will cure tris disease．Sulphur is also used．4．How do you
multiply hyacinth bulbs？A．They multiply from the multiply hyacinth bulbs？A．They multiply from the
small bulbs which form at the base of the large ones． （6）H．A．L．and others．－Your ques－ tion has been many times answered．Try and look a
little more closely into the exact terms of the problem． No part of the periphery of a wheel of a wagon moving along a road travels faster around its axis than an－ other part．The axis moves along the road with the top of the wheel moves twice as fast as the wagon． Per contra，the periphery of the wheel is during one half of its revolution gaining，and during the other half los－ ing speed，as compared with the forward motion of
wagon and axle，so that the bottom of the wheel，or part in contact with the ground，does not move in a climbs a tree that is small enough．to allow of its pe－ climbs a tree that is small enough．to allow of its pe－
culiar manipulation，by a spiral movement around the trunk or a return bending of its coils nearly half way around，by which the snake obtains a grip．Their
favorite trees are the kind that have low limbs，which give them a natural rest．－For the manufacture of steel mem
（7）W．J．B．writes ：Referring to arti－
cle in Scientific Americas，April 23,1887 upon eight light dynamo，will you pan，April 23， 188 ，upon eight paper：1．What size of wire and how many layers to wind uponfieldmagnet to makea plain series machine
of it，using but one strand for conductor？A．Use eight layers of No． 12 （Am．W．G．）wire on each leg of the magnet． 2 ．What changes will be required to
make it operate 12 standard 16 candle power lamps in stead of 8？A．Put coarser wire on the armature，say No．18，and increase the speed，and
mensions of the machine about 20 per cent．
（8）P．S．asks：How many gallons of deliver into a tank．the point of delivery being 38 feet bove ground and the head of water being 13 feet higher than point of delivery？A．1，400 gallons per hour．
（9）R．F．asks how large to make a will require a globular balloon of 716 fect Aismete when flled with the carbureted hydrogen of your gas
works to lift 5 pounds and the weight of the balloon of works to lift 5 pounds and the weight of the balloon of cay 2 pounds．For material use strong tissue paper or
Chinese silk well varnished with rubber varnish．See Chinese silk well varnished with rubber varnish．See
Ralloon Making，Scientific American Supplement Nos．249， 413.
（10）G．K G．asks：What will remove icycle oil from corduroy without leaving a stain？A．
Use ether or a mixture of ether and ammonia．Apply in a circle all around the stain，and sponge off the spot ast of all．
（11）H．K．asks（1）the most practical method for making brass signs．A．Use nitric acid to
eat into the metal． 2 ．How to permanently blacken the eat into the metal．2．How to permanently blacken the
letters and scroll work？A．Mix asphaltum，brown japan，and lampblack into a putty－like mass，and then pentine．
（12）S．O．N．writes：We have a driven but it does not pump easy．We think the point is in clay，and we cannot turn the pipe in ground Can you suggest a way to make the water flow more freely－like xploding a dynamite cartridge in it？A．The pipe to receive the surface water lying upon the clay，or be may give a better rapply It will be of no service to orpedo the well in the clay．Besides，your point should have a strainer which precludes the use of a torpedo without first withdrawing the tube．Better drive deeper and find what is below the clay．
（13）J．J．asks the best way to tin tem－ without injuring temper or getting too hard．I have first cleaned the pleces in a hot solution of potash，then put them in diluted muriatic acid and then in zinc acid， before going into the tin，but cannot get them smooth and even．A．Your manuipulation appears to be right， only that the surfaces should have a half polish or be quite smooth．Also the tin bath should have a clean
surface，which can be made hy sprinkling a little pow
ered sal ammoniac upon the surface and skimming f the tin ．
（14）E．P．asks ：How are photographs on boxwood obtained？A．See Scientific American
Uuplement，No．428，page 6830，also No．584，page 9320．
（15）C．E．E．asks how to make an enam－ el on steel，one that will dry quick and black．A．Use
japan varnish and bake in an oven at $250^{\circ}$ temperature．
（16）J．M．L．asks what to put in com－ does whal tar to make it adhere to iron better than it with pulverized plumbago or lampblack Thin wis benzine if necessary．If color is no object，use Prince＇s netalic paint．
（17）H．S．sends a plant to be named， and asks whether it has any medicinal properties．A The plant is a species of elder，Sambucus glauca．Its
medicinal properties，if it has any，are probably the same as those of the eastern species，the flowers of which have been reported diaphoretic and discutient， the berries aperient and sudoriffc，the bark purgative and，in small doses，diobstruent．
（18）W．S．asks：What is the greatest height at which a siphon will work，and the larges
pipe that can be used therefor？A．There is no limit to the capacity of a pipe for a siphon．The greates height depends upon the pressure of the air．It may be 33 feet，practically 28 to 30 feet．
（19）G．S．D．asks how hair clippers are ground or sharpened，whether on flat surface or be－ tween the teeth，and what is used to sharpen them with．
A．Never sharpen the clippers on the fiat side．Always on the bevel side．Use Washita or Arkansas stone and oil．You can buy the stone in long sticks， 18 inch
（20）P．\＆S．ask as to the feasibility of running an upright shaft direct from engine，through a six story building and connecting with it shafts on each
fioor by gearing．A．Vertical driving ehafts in mills are only to be tolerated as a necessity，or as turbine shafts．The step of a long vertical shaft is a source constant trouble，which added to the noise has about
（21）H．M．D．－Six inch copper pipe may be bent to a radius of 3 or 4 feet by fllling，after an－ nealing，with resin．Allow the resin to cool，and bend that the pipe will bear half way round to keep it from flattening．Bend a little，then melt the resin out and （22）
（22）F．E．writes：I wish to make a wire rheostat with resistance of 3,000 ohms，divided
into 10 divisions or more－or 15 ．What size wire will I have to use to put 200 ohms resistance in each coil，and how much to each coil？Also give same with 300 ohms
resistance to each coil．A．Of No， 35 resistance to each coil．A．Of No． 35 German silver
wire，one pound gives about 8,136 ohms resistance． Therefore one twenty－seventh pound will give you
about 300 ohms，and one fortieth pound will give about 200 ohms．The exact resistance of each coil has to be determined experimentally．One pound of No． 40 wire
gives about 41,248 ohms，so much less of this，about gives about 41,248 ohms，so much less of
one－fifth the above amounts，would answer．
（23）C．H．G．wishes further directions about making a kite without a tail，such as was de－ making the bow，which you do not seem to under stand．read：＂The bow ．．．consists of two pieces
of osier，each $51 / 2$ units in length，that form，through of osier，each $51 / 2$ units in length，that form，through
their union，a total length of 7 units．＂This simply means that the two ends of the osier that are to form the a sufficient extent to make the entire length of the bow when the two pieces are joined seven－tenths the lengt （24）G．C．H．asks ： 1 ．What is the best they require before magnetization，and whut is the best shape to make them？A．Use cast steel．hardened bably the best．2．Would a heavy coiled flat spring，sa 34 inch thick and 6 inches wide and 20 feet long，be eight times as strong as one one－sixteenth inch thick， inches wide，and the same length as the flrst？A．It
would be more than eight times as strong．3．Will the lighter spring lift 150 pounds？A．You have left out
the element of time and distance．It will lift 150 pounds if connected with the weight by suitable me－ chanism．
（25）D．M．G．writes：In the article what kind of a battery can be used？Will a telegraph battery answer，and how many？Where can I get the carbons，in Cleveland？A．It will require from 25 to 50 Grove or Bunsen cells．The ordinary telegraph bat－
tery will not answer．You can get carbons from any tery will not answer．You can yet c
house dealing in electrical materials．
（26）J．D．McC．asks ：1．In Scientific american Supplement，No．160，article on induction coils，what is the object gained by having the secondary coil in two sections，with insulating resin between
them？A．The construction in sections is for the pur－ pose of more effectually separating those layers of the to prevent sparks jumping across and destroying the to prevent sparks jumping across and destroying the
insulating material．2．Is there any good reason for insulating material．2．Is there any good reason for preferring naked wire to silk－covered wire，except its
greater cheapness？A．Naked wire lies closer and is
cheaper than covered wire；no other reason exists for its employment．
（27）O．R．asks ：1．What is a good lue to use in making camera bellows？Ordinary glue rubber cement．See＂Cements，＂in Scientific Ameri－ in which quinol is used in place of pyro？A．You probably refer to the hydroquinone develope hydroquinone 1 to 2 grammes．B．Saturated solution of
carbonate of ammonia in water．To 8 parts of $A$ add 1 （28）W．D．B．S．asks ；1．Is there any difference in the lifting power of an elevator rope or opes when the rope is passed through an eye，and the
two ends attached to the drum，and when the rope is sepa－ ated and attached in two places on the crosshead of the elevator，the ropes being all of one size？A．There is no difference．2．What is the strain on a rope that two men re pulling on，one at each end，supposing one pulls 200 pounds one way，and the other pulls 200 the other way

$$
(29) \mathrm{B} .
$$

（29）B．P．G．writes ：About four years ago a young man in this place boiled a hen＇s egg
nd put it away．On breaking it open the other day， e found that everything in it had shrunk to a mass bout one－twentieth the size of the egg，almost perfectly gg shaped．It looks like a piece of amber，being most eautifully translucent．A．The white of eggs con－ men．By boiling，the albumen is coagulated，but without much if any loss of water．By lapse of time the water radually evaporates，and the result spoken of was pro－ bably due to this evaporation．
（30）Subscriber asks ：Has it been de－ nitely ascertained yet what caused the sinking of the
Oregon？A．It was caused by collision with a vessel elieved to be a coal schooner．
（31）W．S．asks ：Does the brake of a ar wheel when set up so as to nearly but not quite he wheel slides？A．Yes．Ifthewheel is keptfrom rotat－ ng，the part in contact with the rail becomes pollshed nd slides easuly．If allowed to slowly turn，a new sur－ face is continually presented to the rail．The latter practice stops the car quicker．

## TO INVENTORS．

An experience of forty years，and the preparation of
more than one hundred thousand applications for pa－ tents at home and abroad，enable us to understand the laws and practice on both continents，and to possess un－ ynopsis of the patent laws of the United States and all foreign countries may be had on application，and persons contemplating the securing of patents，either at home or aroaa，are invited to write to this office for prices， ensive facilities for conducting the business．Address munn \＆Co．office Scientific american， 361 Broad－
