ENGINEERING INVENTIONS.

A car coupling has been patented by Mr. Edward A. Olmstead, of Buffalo, N. Y. The main objects of this invention are to relieve the car body timbers of buffing or pulling strain, and to so mount the drawbar that no actual strain will fall upon the king pin or bolt, the invention covering various novel details of construction and combinations of parts.

A frogless switch has been patented by Mr. Frank Nemacheck, of Appleton, Wis. Combined with the main line rails, an intermediate rail connections, to dispense with the use of the ordinary form of frog.

A car coupling has been patented by Mr. Carlos J. Warren, of Jamestown, Dakota Ter. A spring-actuated bumper bar is held to slide at one side of the drawhead, a dog being pivoted upon the bar and a lift bar pivoted below the bar, with a crank arm adapted to engage the dog, with other novel features, making a coupling which can be operated without passing or standing between the cars.

MISCELLANEOUS INVENTIONS.

A combination tool has been patented by Mr. Joseph Brouse, of New Berlin, Pa. It consists of a hammer, saw, square, nail puller, and plane, all mounted on a single handle, in a novel way.

A saw file adjusting weight has been patented by Mr. William Moore, of Mooney, Ind. The invention consists in combining with a file handle a pendent weight by which the file may always be held at the same angle, thus insuring uniformity in the angles of the teeth.

A machine for winding bobbins for sewing machines has been patented by Mr. George H. Willey, of Abington, Mass. This invention covers a novel construction and combination of parts, making a machine which is simple, and easily and quickly operated for winding one bobbin at a time

A snapper attachment for whips has been patented by Mr. William Becker, of Brooklyn, N. Y. It is designed to form a rigid and durable connection with the whip tip, and consists of a stiffening piece of tubular section of a quill, embracing the tip, a plaited covering extending over the whip tip and strengthening piece, and forming a loop.

A mechanical movement has been patented by Mr. Abraham L. Akins, of Larimer's Station Pa. The invention covers a novel construction and combination of parts, so arranged as to be operable by hand or foot, and applicable for use in the transmission of power to almost any form of light machinery.

A measuring faucet has been patented by Mr. Ole Martinson, of Meridian, Wis. The invention covers novel combinations and constructions of 10. parts for use in relation to a suitable supply, whereby accurate measuring is accomplished without waste, or the entrance of dirt or insects to the liquid or commodity being measured.

A coffee pot has been patented by Mr. Harry B. Cornish, of Blue Earth City, Minn. It is of | 12. that class having an inner vessel to hold the ground coffee, into which boiling water is poured and allowed to percolate through the coffee and a strainer into the main outer vessel, the invention covering novel details of construction and combinations of parts.

A rounding jack for hat brims has 14. Sketch of the Birthplace of James Watt, at Green been patented by Mr. Michael Hild, of Philadelphia, Pa. This invention relates to a former patented invention of the same inventor, and covers a sectional rod for operating the knife stock, whereby, when the stock is drawn back nearly to the end of the jack, the rod may be contracted so as not to be in the way when

A surgical splint has been patented by Miss Annie Caller, of Albany, N. Y. It has extensible side rails, a plate connected thereto forming rests for both legs of the patient, straps for securing the 19. Designs for Furniture. patient, and other novel features, making a simple and 20. Scene in the Court of Inquiry as to the Cause of the inexpensive apparatus, which may be quickly and easily

A ticket holder has been patented by Mr. Moses H. Strans, of Columbus, Ohio. It consists preferably of a single piece of wire bent upon itself in novel form, making a device capable of ready and easy attachment to a bolt or piece of goods to retain a label, and also for attaching a ticket to articles of apparel or

A wagon seat has been patented by Mr. Charles Van Horn, of Bethlehem, Pa. Springs are secured to the longitudinal center of the seat, in combination with pivoted boards provided at the center with arms linked together and to the springs, in com bination with supporting irous, so that the seat will hav, only a level up and down motion.

A lock for firearms has been patented by Mr. Jacob Nicely, of Enon Valley, Pa, It is a combination of two locks, the sears of which have lugs projecting inwardly and arranged in different planes, a trigger being centrally located in the stock between the locks, whereby provision is made for releasing either of the hammers or both in rapid succession.

A device for weighing and sacking grain has been patented by Mr. Charles E. Cole. of Somerville, N. J. The invention covers a novel construction and combination of parts, affording means whereby the grain is automatically weighed and sacked on passing from the thrashing machine, the grain being delivered continuously without interfering with the

An indicator for non-transparent receptacles containing liquids has been patented by Mr. Frank H. Palmer, of Long Island City, N. Y. Combined with a reservoir is a tube secured to the top and extending inwardly, a transparent cover being secured

to the top of the tube, and a float adapted to slide freely in the tube, the float being seen only when the receptacle is nearly full.

A washing machine has been patented by Mr. Marvin Newton, of Girard, Pa. A rocking rack or open bottom is journaled in a tub, a rocking presser being journaled above the rocking bottom and made hollow at the under side, and having air holes and valves closing them, to induce suction, whereby the washing of clothes may be accomplished thoroughly and quickly.

A washing machine has been patented section and siding rail section, is an auxiliary rail con- by Mr. Jeremiah Biddison, of Moscow, Idaho Ter. necting with either of the intermediate rail sections, an Combined with a tub having a reciprocable pounder is operating lever connected to a rod, and S-shaped crank | a frame with a mortise in one of its cross bars centrally mounted upon the heads of the pounder and adapted to be reciprocated between the sides and over the ends of the tub, with over novel features, making a machine of simple construction and very efficient in operation.

> A brick kiln has been patented by Mr. Jacob Buhrer, of Constance, Baden, Germany. It is provided with a series of chambers, gas generators and gasometers, and with air and gas conduits, arranged in a novel way, whereby one portion of the kilu may be isolated from other parts, and two chambers may be fired at once, securing a larger production of brick, tile, terra cotta, etc.

SCIENTIFIC AMERICAN BUILDING EDITION.

FEBRUARY NUMBER.

TABLE OF CONTENTS.

- 1. Elegant Plate in Colors showing the perspective elevations of two Dwellings at Orange, N. J., cost ing about Five Thousand Dollars each, with floor plans, sheet of details, etc.
- Plate in Colors of a House in the Colonial style, ${f costingaboutFiveThousandFiveHundredDollars},$ with floor plans, sheet of details, etc.
- Elevation and first story plan of a Splendid Apartment House.-Geo. H. Griebel, architect, New
- 4. Perspective view and floor plans for a Suburban Residence, costing Sixteen Thousand Dollars.
- Illustrations consisting of plans and perspective, for a corner house to cost about Five Thousand Five Hundred Dollars.
- Views of two substantial Dwellings, at Springfield, Mass.
- Perspective view and floor plans of a Dwelling of moderate cost.
- Illustrations of a Residence at. Latrobe, Pa., and a residence at Pittsburg, Pa., with floor plan.
- Engraving of the beautiful new Cancer Hospital, New York.—C. C. Haight, architect.
- Front elevation and plan of a small School House, costing about One Thousand Eight Hundred gine Co.
- Perspective sketch of Main Stairway and Hall of the Handsome Residence of Mr. D. J. Chandler, at Chattanooga, Tenn.
- Illustrations wilth floor plans of Snow Hall of Natural History, at Lawrence, Kansas.-Mr. J. G. Haskell, Topeka, Kas., architect.
- Engravings of the Tavern, the Casino, and Casa Grande, at Decatur, Ala., also a picture of the Anniston Inn, at Anniston, Ala.
- ock-on-the-Clyde.
- 15. A Riverside Residence at Maidenhead,-E. H. Bourchier, architect.
- Suggestions as to the adornment of Highways, with five figures.
- Two perspective views and floor plans of a Villa on the Square of the Bois de Boulogne, in Paris.
- 18. Pictures of the great Lumber Raft recently lost at
- Fire at the Opera Comique, Paris.
- 21. Miscellaneous Contents: Plastering; how it is applied, finished, and decorated.—Brick as a Building Material.—The Doorway of Sau Petronio at Bologna.—How I Build an Ice House.—Fireproof Wood.-Flow of Water through Pipes. Classification of Styles.—Recent Discoveries at Pompeii.-Pressure at which Lead Pipes Burst.-New Materials and Inventions,-Freuch Plaste New Method of Waterproofing Brick Walls .- Build-Cuttings.—Stiffness in Girders.—The Temple of Burnham's New Improved Turbine. Sold at cost of Buildings. Fireproof compou Patching Stone.-The Chair of Queen Hatasu, illustrated.—The E. N. Gates System of Hot Water Heating, illustrated.—How to Braze Brass to Conper.—An Agate Forest in Arizona.—Pratt's Blind Opener, illustrated.—Drawing Instruments.—The Cortright System of Metal Plate Roofing, with illustrations. - Adjustable Tools, illustrated. - Art Metal Work, with illustration,

The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies. 25 cents. Forty large quarto pages; equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITEC-TURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural publication in the world. Sold by all newsdealers.

MUNN & CO., PUBLISHERS, 361 Broadway, New York.

Special.

HEARTS.

Until within a few years the diseases of the heart and of the system were in nearly all cases reached through he stomach, for the doctors said: "Wecannot, of course, each the heart directly. How can we?"

This question, asked twenty-five years ago, was only partially answered—it was only guessed at—until the discovery of "Compound Oxygen." Drs. Starkey & Palen, the physicians who have been so successfully ministering this remedy, answer the question by telling of their experience. They call attention to the fact that on the completion of the circuit of the system, all the blood which has been thrown out by the heart comes back to the nearthy the way of the lungs. Here it finds a great field for neration, exceeding in area the entire outer surface of the body. Here, with the air, the oxygen reaches the blood. The returning blood, entering the heart invigorated, adds new vigor to that organ, and, with less effort, a greater volume is sent forward, carrying vigor and comfort through all the arteries and veins in its circuit. This is a very brief statement of the method of cure by Oxygen. But a reading of the letters of patients who speak of the comfort the Treatment gave them, of the relief of heart trouble, and of the ability to sleep, after being for months or years deprived of it by palpitation or fluttering of the heart, will be the best evidence that could be produced that the right method of cure for disease has been found in "Compound Oxygen." And the value of the statement will not be decreased by its brevity.

The curiosity as to what Compound Oxygen is may be

gratified by any one who will take the trouble to write a postal card or letter of request to Drs. Starkey & Palen, at 1529 Arch Street, Philadelphia. They publish a brochure of two hundred pages, entitled Compound Oxygen-Its Mode of Action and Results, which will be sent

Business and Personal.

The charge for Insertion under this head is One Dollar a line for each insertion; about eight words to a line Advertisements must be received at publication office as early as Thursday morning to appear in next issue

Leather Link Belting is the most reliable for swift running machinery. For particulars write Chas. A. Schieren & Co., 47 Ferry Street, New York.

SOUTH BOSTON IRON WORKS, July 1, 1887. CHAS. A. SCHIEREN & Co., 47 Ferry St., N. Y.

We have been using one of your 4% inch Link Belts on quarter turn for the last four months. It has done its work in a most satisfactory manner, and we take pleas ure in recommending it as the most perfect quarter turn belt we have ever used. Yours very truly,

WM. P. HUNT, JR., Supt. South Boston Iron Works,

For Steam Heating—the Dunning Patent Wrought Iron Boiler. Over 13,500 in use. Manufactured by New York Central Iron Works, Geneva, N. Y., U. S. A.

A patent for \$100. Copy, 10 c. L. box 120, Concordia Kan

"The Improved Greene Engine." Steam closing mechanism. Sole builders, Providence, R. I., Steam En-

Small boat eng. aud b., \$90. Louis Sahm, Indls., Ind. Wanted-A thorough mechanic, well posted in the manufacture of locks and of builders' hardware in all its branches, and capable of taking charge of a large fac

tory as general foreman. State past experiences, etc. Address "Manufacturer," P. O. box 773, New York. Patent buttou fastener, No. 376,497, for sale, or placed on royalty. Address A. L. Winn, Hillsboro, Ark.

Wanted-A first class traveling salesman, with expe rience in selling machinery. Apply by letter to "H.," box 773, New York.

Don't flyure percentage and make mistakes. Send for circular. Ladd's Discount Book, 35 Chambers St., New

The Diamond Prospecting Co., 22 W. Lake St. Chicago, Ill., general agents for the Sullivan diamond prospecting drills.

Parties requiring milling machine or screw machine work furnished in large or small quantities, will please write to the manufacturers, E. E. Garvin & Co., 139, 141, 143 Center St., New York City.

For House Pumping.-For sale cheap-A 5" Rider hir engine, with 1%" pump. But little used. H. N. M., P. O. box 773, New York.

Force Bain, 76 Market St., Chicago, designer and constructor. Electrical apparatus, fine and special machinery, etc.

For Sale-A Springfield gas machine, 600 light, with all the appurtenances. In good order. Apply to Secretary of the Northern Liberty Market Co., Washington, D. C.

Nickel Plating.-Manufacturers of pure nickel an odes, pure nickel salts, polishing compositions, etc. \$100 "Little Wonder." A perfect Electro Plating Machine. Agentsof the new Dip Lacquer Kristaline. Complete ing Prospects.—Importance of Carpentry.—Perdouth for plating, etc. Hanson, Van Winkle & Co., New meability of Building Materials.—Compost for ark, N. J., and 32 and 34 Liberty St., New York.

Soleb, Ethiopia.—The Architect of Rome.—Worth | manufacturing and advertising. Address York, Pa.

Perforated metals of all kinds for all purposes. Robert Aitchison Perforated Metal Co., Chicago, Ill.

For the latest improved diamond prospecting drills, address the M. C. Bullock Mfg. Co., 138 Jackson St.,

The Railroad Gazette, handsomely illustrated, published weekly, at 73 Broadway, New York, Specimen copies free. Send for catalogue of railroad books.

The Knowles Steam Pump Works, 113 Federal St., Boston, and 93 Liberty St., New York, have just issued a new catalogue, in which are many new and im proved forms of Pumping Machinery of the single and duplex, steam and power type. This catalogue will be mailed free of charge on application.

Link Belting and Wheels. Link Belt M. Co., Chicago. Iron Planer, Lathe, Drill, and other machine tools of iern design. New Haven Mfg. Co., New Haven, Conn

Supplement Catalogue.-Persons in pursuit of infornation of any special engineering, mechanical. or tific subject, can have catalogue of contents of the Sci-ENTIFIC AMERICAN SUPPLEMENT sent to them free The SUPPLEMENT contains lengthy articles embracing the whole range of engineering, mechanics, and physica science. Address Munn & Co., Publishers, New York.

Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J The Holly Manufacturing Co., of Lockport, N. Y., will send their pamphlet, describing water wo chinery, and containing reports of tests, on application Curtis Pressure Regulator and Steam Trap. See p. 77. Planing and Matching Machines. All kinds Wood Working Machinery. C. B. Rogers & Co., Norwich, Conn. Multiple spindle drills, driven by endless belts, with adjustable tightener. New, novel, cheap. Dwight Slate Mch. Co., Hartford, Conn.

Iron, Steel, and Copper Drop Forgings of every decription. Billings & Spencer Co., Hartford Conn.

We are sole manufacturers of the Fibrous Asbestos Removable Pipe and Boiler Coverings. We make pure asbestos goods of all kinds. The Chalmers-Spence Co., 419 and 425 East 8th Street, New York.

The Improved Hydraulic Jacks, Punches, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

Friction Clutch Pulleys. D. Frisbie & Co., N.Y. city Tight and Slack Barrel Machinery a specialty. John Greenwood & Co., Rochester, N.Y. See illus. adv., p. 28.

Catarrh Cured.

A clergyman, after years of suffering from that loath some disease, catarrh, and vainly trying every known remedy, at last found a prescription which completely cured and saved him from death. Any sufferer from this dreadful disease sending a self-addressed stamped envelope to Prof. J. A. Lawrence, 212 East 9th St., New York, will receive the recipe free of charge.

Wardwell's patent saw benches. All sizes in stock. Rollstone Machine Co., Fitchburg, Mass.

Send for new and complete catalogue of Scientific Books for sale by Munn & Co., 361 Broadway, N. Y. Free on application.

NEW BOOKS AND PUBLICATIONS.

THE ENGINEER'S CATECHISM, A PRAC-TICAL TREATISE FOR THE USE OF THOSE IN CHARGE OF STEAM PLANTS. By George L. Fowler. New York: American Rail way Publishing Company. 1888. Pp. 183. Price 50 gents.

This work is intended as a book of instruction for engineers in charge of steam plants, as to the most approved methods to be employed in the prosecution of their duties. It is in the form of question and answer, and will prove a useful little work for regular engineers as well as for those preparing for examination. Its low price should assure it a large sale.

HINTS 'TO CORRESPONDEN'I'S.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information, and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all, either by letter or in this department, each must take his turn.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(1) G. W. S. asks: 1. What material can I use to make a small model engine, that is easier cast than cast iron, and will work equally as well in the lathe and in the engine? Of what material, and in what way, can I make a small air tight valve, that will hold without leaking a cold air pressure of 10 to 15 pounds? A. For model engine and air tight valve use brass or type metal. The valve may be given a metal seat perforated with a number of small holes and closed by an India rubber fiap. 2. What is the simplest chemical I can use that will be affected by light passing through a negative placed over it? Don't want a perfect image, or any shading or half tints. A. For chemical affected by light, you may use chloride or bromide of silver, or a solution of gelatine containing 10 per cent of bichromate of potash dissolved in it. 3. What is the best form of condenser now in use in connection with the steam engine for producing a vacuum in the cylinder? A. The surface condenser is the general type of condenser now adopted. 4. Was the device for cooking with the heat of an ordinary oil lamp, where the food was placed in an air tight vessel surrounded by water kept hot by the lamp, a practical arrangement, or mere supposition? An account of it was published some time since by Mr. Atkinson, I believe. A. The device for cooking was considered practical by its originator. 5. What material can I use to cast small articles, that is somewhat stronger than Babbitt and will bear being drilled and tapped? A. For small castings use brass or bronze for good work, and type metal where easy fusibility is an object.

(2) R. C. asks: 1. How to make say a half gallon of the solution for nickel plating as described on page 10 of the present volume of the Scien-TIFIC AMERICAN? A. For slightly over a half gallon solution, use nickel sulphate one-fifth pound, ammonium tartrate one-seventh pound, taunic acid one onethousandth pound, water one-half gallon. 2. Would four cells of Grenet battery with zincs 2 iuches by 2 inches and six electric light carbons each be large enough for plating small articles? A. Yes; connect in series, zinc to carbon. 3. What solution would I need for dipping the articles to be plated in, to make the plating adhere? A. The articles must be scoured with ground numice, whiting, or similar material and water. then dipped in warm potash solution, again scoured, and immediately before insertion in the bath dip into lan acid solution or cyanide of potash solution. For
