

## ENGINEERING INVENTIONS.

A safety valve has been patented by Messrs. John W. Spolders and Francis X. Vien, of Brooklyn, N. Y. It is designed to act on the slightest excessive steam pressure, all the contacting points offering very little resistance, while the construction is simple and not liable to get out of order.

A railroad water tank has been patented by Messrs. John Skinner and Rolly W. Jackson, of Newman, Ill. This invention covers improvements to prevent the valve and its connections and the outlet pipe from becoming inoperative from the freezing of the water in the tank, and to do this effectually and cheaply.

A car coupling has been patented by Messrs. Henry L. and Charles W. Banta, of Canon City, Col. This invention covers a peculiar construction and arrangement of the coupling pin adjusting mechanism and of the link adjusting contrivance, the coupling being operated without the train man going between the cars to couple or uncouple them.

An exhaust nozzle extension for locomotives has been patented by Mr. Julius T. Lee, of Mattoon, Ill. Pipes of varying lengths are movably and adjustably supported within the smoke stack, above the stand pipe, whereby the exhaust steam may be discharged at different points in the stack, as desired, to increase or diminish the draught, the use of either discharge pipe being under the ready control of the engineer.

A balanced valve for steam engines has also been patented by the same inventor. The invention consists of an adjustable table or track held in the steam chest, and a roller frame with rollers traveling on the table and supporting the slide valve, being designed to save friction and wear of the valve, while keeping it true and even.

## AGRICULTURAL INVENTIONS.

A center draught mowing machine has been patented by Mr. Warren Hill, of Towanda, Pa. This invention covers a novel construction and combination of parts in a machine designed to cut a very broad swath, and in which all the parts are easily adjustable, without rattling, and the minimum amount of friction.

A seeding machine has been patented by Mr. William H. Schenck, of Sterling, Col. This invention provides a drill designed to close without the aid of a drill or furrow closer after the passage of the drill-opening devices, making a narrow furrow and avoiding the necessity of employing a dragging furrow-closer.

## MISCELLANEOUS INVENTIONS.

A chinch trap has been patented by Mr. Robert H. Wilson, of Timber Lake, Col. This invention provides a trap of novel construction designed to catch any kind of insects which secrete themselves in crevices and places from which it is difficult to dislodge them.

A bobbin winder for sewing machines has been patented by Annie Lewis, of Galveston, Texas. This invention covers a novel construction, combination, and arrangement of parts, constituting a new and improved attachment for sewing machines for winding bobbins.

A mandrel for bending lead pipes has been patented by Mr. John J. Carr, of Brooklyn, N. Y. It is made with a shank having a quarter bend and slightly tapering, with a shoulder formed on the shank for driving the latter wholly or partly into the pipe to be bent.

A combined burglar alarm and sash lock has been patented by Mr. Archie B. Caudle, of Monroe, N. C. This invention provides a device serving as a lock for the sash, and which operates an alarm, while the sash may be partly raised for ventilation, with no danger of its getting out of order, and the alarm may automatically reset itself.

A rubber compound or mixture has been patented by Mr. John A. Titzel, of Glenshaw, Pa. It is composed of gilsonite asphaltum, vulcanized rubber or scrap or waste, manganated linseed oil, spirits of turpentine, deodorized petroleum naphtha, and powdered sulphur, making a compound to be variously prepared and applied for different uses.

A twine oiler for self-binding reapers has been patented by Mr. Donald McCoig, of Mull, Ontario, Canada. It is a novel device, to be attached to the reaper in such a position that the twine may pass through it while passing from the twine box to the needle, to coat the twine with a substance to prevent insects and mice from eating it.

A whiffletree coupling has been patented by Mr. Ingalls Bragg, of South Andover, Me. This invention relates to an improvement in couplings in which the pivot bolt has a bearing above the whiffletree in a brace fixed to and rising from the cross bar or evener, the object being to make sure against accidental loosening and detachment of the bolt.

A bolt or bar having a coating of enamel or vitreous substance, combined with a protecting sleeve or jacket, has been patented by Mr. Oliver R. Butler, of Cooperstown, N. Y. Such vitreous covering of bolts is designed to absolutely resist the burglar's saw or file, making it impossible to sever a bolt or bar so made by any cutting instrument.

A skimmer has been patented by Mr. George W. Gullede, of Briartown, Indian Ter. It consists of a pan secured to a handle fulcrumed on a pivot secured to an extension rod, with a slotted fork held on the pivot and pressed against the end of the handle by a spring coiled on a rod extending from the fork, being specially adapted for skimming sorghum while undergoing the usual boiling process.

A rest for packing hats has been patented by Mr. James W. Seymour, of Brooklyn, N. Y. Combined with a packing box having a series of spaced

brackets on opposite inner sides is a rest consisting of a ring of the general shape of the hat crown, and having loop ends longer than the width of the hat crown, to facilitate the packing and unpacking of hats in boxes.

A method of musical notation has been patented by Mr. Diego Fallon, of Bogota, U. S. of Colombia. It consists essentially of designating the sounds by consonants and their value and duration by vowels, the music to be written without the use of notes, clefs, keys, staves, flats, or sharps, to enable a beginner to learn quickly, and to transpose music readily from one key to another.

A churn has been patented by Mr. Lambert Snyder, of Midland Park, N. J. The dash stem has adversely arranged slotted conical frames, with horizontal rods in alignment with the slots of the frames, whereby the fluid is drawn from the top and bottom toward the center of the dasher, in a way designed to make fine butter in a short time, with little labor.

A portable safe has been patented by Mr. Joseph J. Schuknecht, of Bailey, Ohio. It is for the storage of important papers, jewelry, etc., and has a hollow box with a lid, a box enlarged to form a step near its top held in the body a fire-proof filling isolating the box from the body, and other novel features, being cheaply manufactured and designed to afford secure protection against fire.

A combined cane and stool has been patented by Mr. William Leisner, of Los Angeles, Cal. This invention covers a cane made with two separable sections, a tubular head section and a body section, with two series of essentially triangular hinged members, and other novel features, making a cane which can be conveniently converted into a stool, while the article can be simply and cheaply manufactured.

A screw driver has been patented by Mr. Michael Cashin, of New York City. It has a longitudinally slotted handle with reversible pawls, the bit having right and left threads, a ratchet having pins engaging grooves in the bit, the pawls being adapted to be thrown into and out of engagement with the ratchet by turning the cap, the device being designed to be used as a simple screw driver or a ratchet screw driver.

## SCIENTIFIC AMERICAN BUILDING EDITION.

NOVEMBER NUMBER.—(No. 37.)

## TABLE OF CONTENTS.

1. Elegant plate in colors of two cottages costing from twelve to fifteen hundred dollars, details, etc.
2. Elegant plate in colors of two residences at Springfield, Mass.
3. A villa at New Rochelle, N. Y., recently built at a cost of eight thousand six hundred dollars. Perspective and floor plans.
4. Full page illustration of the new "Times" building, New York City.
5. A Queen Anne house at Richmond Hill, N. Y., costing five thousand dollars, complete. Plans and perspective.
6. A residence at Orange, N. J., costing thirteen thousand three hundred dollars complete. Perspective and floor plans.
7. A small house or office costing one thousand dollars. Floor plan and perspective.
8. A Queen Anne cottage at Richmond Hill, N. Y. Cost about seven thousand five hundred dollars. Plans and perspective.
9. Pavilion of the Republic of Chili at the Paris Exposition of 1889.
10. Sketch of John Banyan's pulpit, formerly in the old meeting house at Lambeth. Sketch of old meeting house at Lambeth.
11. A residence at Worcester, Mass. Perspective and floor plans. Cost about eight thousand dollars.
12. Design for a Hotel at Richmond, Va.
13. The New Municipal Buildings, Glasgow, recently opened by Her Majesty.
14. The Glasgow Exhibition—view from under the central dome.
15. Perspective and floor plan of the Episcopal Church at Richmond Hill, Long Island, built at a cost of four thousand dollars.
16. A Barn and Carriage house for eight hundred dollars. Plans and perspective.
17. Miscellaneous contents: Decoration of windows.—The atrium in Roman houses.—Interesting experiments with Portland cement.—Shavings as a filling.—Idaho streams that vanish.—The practical limit of speed.—Ventilation of cow stables.—Polishing granite.—Substitute for white pine.—The hardy blue passion flower, illustrated.—Ivy on buildings.—Petrified wood in Texas.—Roman tessellated pavement at Box, England, illustrated.—Slow-burning construction, illustrated with three figures.—Hedges of flowering plants.—The squares of Paris.—The Hartman inside sliding window blind, illustrated.—A new woodworking machine, illustrated.—The M. H. Jacobs portable warm air furnace, illustrated.—An improved self-draining floor for stalls, illustrated.

The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Forty large quarto pages, equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural publication in the world. Sold by all newsdealers.

MUNN & CO., PUBLISHERS,  
361 Broadway, New York.

## Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

Wanted—50 to 65 H. P. Corliss or other first-class engine, either new or second hand. Must be in perfect condition. Address C. M. W. B., box 773, New York.

Special facilities for the manufacturing of all kinds of light machinery, hardware, and novelties by contract or otherwise. Press work and stamping done on short notice. Estimates furnished. Punches, dies, and special tools made when required. Rockaway Manuf. Co., 3 East 14th St., New York.

Curiosities of the U. S. Patent Office.—Just published. Nothing like it. A unique, instructive, entertaining, and amusing book. Nicely illustrated. Elegant paper. Large type. Fine cloth binding, stamped in gold and black. Price, \$2.00. Send green stamp for 12 page descriptive circular. Wm. C. Raymond, publisher, Syracuse, N. Y.

Teneriffe and its Six Satellites; or, the Canary Islands—Past and Present. By Olivia M. Stone. With maps and illustrations from photographs taken by Harris Stone. In two volumes. Price, \$15.00. Address Munn & Co., 361 Broadway, New York.

Just Published—Elements of Electric Lighting, including electric generation, measurement, storage, and distribution. By Phillip Atkinson, A.M., Ph.D., author of Elements of Static Electricity. 260 pages; 104 illustrations. Price, \$1.50. For sale by Munn & Co., 361 Broadway, New York.

Pratt & Letchworth, Buffalo, N. Y., solicit correspondence relative to manufacturing specialties requiring malleable gray iron, brass, or steel castings.

Supplement Catalogue.—Persons in pursuit of information of any special engineering, mechanical, or scientific subject, can have catalogue of contents of the SCIENTIFIC AMERICAN SUPPLEMENT sent to them free. The SUPPLEMENT contains lengthy articles embracing the whole range of engineering, mechanics, and physical science. Address Munn & Co., Publishers, New York.

For the latest improved diamond prospecting drills, address the M. C. Bullock Mfg. Co., Chicago, Ill.

Link Belting and Wheels. Link Belt M. Co., Chicago. Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J.

Lockwood's Dictionary of Terms used in the practice of Mechanical Engineering, embracing those current in the drawing office, pattern shop, foundry, fitting, turning, smith's and boiler shop, etc., comprising over 6,000 definitions. Edited by a foreman patternmaker. 1888. Price, \$3.00. For sale by Munn & Co., 361 Broadway, New York.

Iron Planer, Lathe, Drill, and other machine tools of modern design. New Haven Mfg. Co., New Haven, Conn.

Perforated metals of all kinds for all purposes. The Robert Aitchison Perforated Metal Co., Chicago, Ill.

The Holly Manufacturing Co., of Lockport, N. Y., will send their pamphlet, describing water works machinery, and containing reports of tests, on application.

Wrinkles and Recipes—Compiled from the SCIENTIFIC AMERICAN. A collection of practical suggestions, processes, and directions for the mechanic, the engineer, the farmer, and the housekeeper. Illustrated colored frontispiece. Edited by Park Benjamin, Ph.D. Third edition. Price, \$2.00. For sale by Munn & Co., 361 Broadway, New York.

Planing and Matching Machines. All kinds Wood Working Machinery. C. B. Rogers & Co., Norwich, Conn.

Iron, Steel, and Copper Drop Forgings of every description. Billings & Spencer Co., Hartford, Conn.

Steam Hammers, Improved Hydraulic Jacks, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

Safety Elevators, steam and belt power; quick and smooth. The D. Frisbie Co., 112 Liberty St., New York.

"How to Keep Boilers Clean." Send your address for free 88 page book. Jas. C. Hotchkiss, 120 Liberty St., N. Y.

The best Coffee roasters, coolers, stoners, separators, polishers, scourers, glossing apparatus, milling and peaberry machines; also rice and macaroni machinery, are built by The Hungerford Co., 69 Cortlandt St., N. Y.

Magic Lanterns and Stereopticons of all kinds and prices. Views illustrating every subject for public exhibitions, Sunday schools, colleges, and home entertainment. 152 page illustrated catalogue free. McAllister, Manufacturing Optician, 49 Nassau St., New York.

Rotary veneer basket and fruit package machinery. I. E. Merritt Co., Lockport, N. Y.

Rod, pin, and dowel machines. 1,000 to 3,000 lineal feet per hour. Rollstone Machine Co., Fitchburg, Mass.

Split Pulleys at low prices, and of same strength and appearance as Whole Pulleys. Yocom & Son's Shafting Works, Drinker St., Philadelphia, Pa.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

## NEW BOOKS AND PUBLICATIONS.

THE METALLIC ALLOYS. A practical guide for the manufacture of all kinds of alloys, amalgams, and solders used by metal workers, together with their chemical and physical properties and their application in the arts and the industries, with an appendix on the coloring of alloys. Translated and edited, chiefly from the German of A. Krupp and Andreas Wildberger, with extensive additions, by William T. Brant, one of the editors of "The Techno-Chemical Receipt Book," etc. Illustrated by sixteen engravings. 12mo. Pp. 428. Price \$2.50. Philadelphia: Henry Carey Baird & Co., 810 Walnut Street.

The title as given above very well indicates the range of this admirable volume, which surpasses in completeness any book on alloys, amalgams, and the coloring of metals previously published in the English language. The treatise is arranged under forty-six chapters or sections and an appendix, each discussing with great amplitude a different subject, and it would be difficult for

any worker in metals to fail to find precisely the alloy, amalgam, or solder which he needs, with a clear description of its properties and uses. A specially interesting feature of the book is the fullness with which phosphor bronze and aluminum alloys are treated. Like all of the publications of this house, so widely known by the industrial character of its books, this volume is provided with a full table of contents and an admirable index, these rendering any subject in it easy of access.

## Notes &amp; Queries

## HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information, and not for publication.

References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated, correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all, either by letter or in this department, each must take his turn.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(1) C. W. D. asks: For the best way to get copper off the sides of a vat which has deposited there. The vat is lead lined. Also can you give me the process of coating electrolytes with steel? A. Connect your vat to the wire leading to the copper or carbon of your battery. Fill vat with sulphuric acid and water, and carry a wire from your zinc pole to a plate of copper immersed in the sulphuric acid. This will strip the copper.—For steeling process we refer you to SUPPLEMENT, No. 605, which we can send you for 10 cents.

(2) H. W. W. asks: 1. What is the process for reducing raw lump alum to burnt alum powder in large quantities? And what is loss in weight of alum by evaporation? A. Simply heat the alum in an open vessel to 401° Fah., such as an enameled frying pan. The following are the elaborate directions of the United States Pharmacopoeia: Alum, in small pieces, one hundred and eighty-four parts. To make one hundred parts, Expose the alum for several days to a temperature of about 80° C. (176° Fah.) until it has thoroughly effloresced. Then place it in a porcelain capsule, and gradually heat it to a temperature of 200° C. (392° Fah.), being careful not to allow the heat to rise above 205° C. (401° Fah.) Continue heating at the before mentioned temperature until the mass becomes white and porous, and weighs one hundred parts. When cold, reduce it to a fine powder, and preserve it in well stopped vessels. 2. Please give receipt for a good blacking. A. For blacking we refer you to Phin's "Trade Secrets," which we can send you by mail for sixty cents.

(3) D. F. C. writes: A party recently passed through here selling a powder which, placed in a lamp containing oil, rendered it non-explosive; do you know of any compound of that description? A. We do not, and no such powder is known. The powder sold was valueless, and without effect of any kind.

(4) A. R. S. asks: 1. If hot and cold water are exposed to a temperature below freezing, will the hot water freeze first? Will it make any difference in this respect whether the water is in open vessels or in closed pipes? A. The cold water will freeze first, whether in open vessels or in pipes. 2. If water that has been heated and is become cold again and water that has not been heated are exposed to heat, will they both begin to boil at the same time? A. The unheated water will be apt to boil the first, owing to the presence of a certain amount of dissolved gases.

(5) R. G. D. asks: 1. If a solid glass ball be dropped into the ocean (at its greatest depth), will it sink to the bottom? A. It will. 2. Why should a diver be weighted according to the depth he desires to descend? A. This is a practical question. A weight that would cause a man to sink in one depth would insure his sinking to any depth. The diver finds by experience what weighting is best adapted to his needs.

(6) A. F. B. asks: 1. How near may one go to a dynamo for the electric light without danger of having one's watch balance wheel magnetized? A. It depends on the dynamo, its size, make, etc., and also on the size, quality of steel, etc., used in the watch movement. 2. What are the symptoms of such magnetizing? A. Your watch will fail to keep time, and the works will attract a fine needle suspended by a thin thread. 3. Supposing the watch balance to be magnetized, how may this be entirely demagnetized? A. For demagnetization of watches we refer you to SUPPLEMENT, Nos. 206, 207, and SCIENTIFIC AMERICAN, 14, vol. 55.

(7) G. B. asks whether or not bisulphide of carbon is too dangerous to handle as an ant and gopher destroyer; in fact, as general insect destroyer. If not too dangerous for a careful person to use, will you please state how best used for above purpose? A. Bisulphide of carbon as well as its vapor is highly inflammable. Inhalation of its vapor produces very serious effects, a species of intoxication following, with loss of memory, etc. A person might become its victim when applying it, however careful he might be. Inject into soil with a syringe or force pump. See SCIENTIFIC AMERICAN SUPPLEMENT, No. 471, which we can send you for ten cents, for illustrations of improved appliances for application of bisulphide of carbon to the soil.

(8) E. F. F. writes: In a discussion with a friend, I made use of the phrase that in the telephone sound was converted into electricity on one end, and then on the other end of the line reconverted into sound. The correctness of this expression was doubted, it being held
