

RECENTLY PATENTED INVENTIONS.

Railway Appliances.

CAR MOUNTING. — Horace Resley, Cumberland, Md. This invention provides for a thrust connection interposed between the side edges of the car and the sides of the truck whereby the motion which takes place between the two in rounding curves is made to adjust the trucks automatically to the curve, so that their axles shall be positively adjusted to a radial position instead of being allowed to adjust themselves.

RAILROAD GATE. — William Zeller, Moorhead, Minn. Lateral lugs, adapted to be depressed by a passing train, are pivoted to sections of the rails, with connections therefrom to a gate-operating mechanism, which is thus adapted to be automatically operated by passing trains so that the roadway will be open when no train is passing and closed by the gate as the train is passing.

CAR COUPLER TOOL. — Jasper B. Lewis, Alexander, N. Y. This is a coupling rod with forked end, the forks being turned at a right angle at the end, while at the other end is a spring hook by which to suspend the tool from the person, whereby the brakeman may stand at the side of the cars and conveniently operate the link and pin, the device being designed to prevent the maiming and loss of life which occurs to so large an extent from brakemen going between cars to couple them. The device has received the indorsement of the New York Board of Railway Commissioners.

TRACK WALKER'S TOOL. — Gabriel Rohrbach and James Shaughnessy, Del Rio, Texas. This is a combination sectional tool which may be conveniently carried, including a claw bar, a spiking maul, a gauge and a level, whereby a single track walker may work effectively alone in doing many things for which a section gang now has to be called.

Electrical.

AUTOMATIC SIGNAL. — Robert O. Owen, Lynchburg, Va. This is a telegraphic railway signal in which the passage of each train past each station or section of track will automatically send a signal to the train dispatcher's office recording the fact, the invention covering a novel construction and arrangement of circuits, contacts and signaling devices.

GALVANIC BATTERY. — Candido G. De Peralta, Havana, Cuba. Combined with zinc and carbon electrodes separated by blocks of insulating material and bound together is a metallic containing vessel, and a paste containing an active and a deliquescent material surrounding the electrodes, forming a compact paste battery of inexpensive material and convenient form, suitable for telephonic, telegraphic and other uses.

HIGH WATER ALARM. — Isaiah H. Simpson, Brunswick, Me. This device consists of a spring-supported bucket with apertured bottom and siphon, the downward movement of the bucket being arranged to operate an electric circuit closer, the alarm being designed especially for use with water towers and tanks in freezing weather, to give instant notice at the engine room in case of high water.

Agricultural.

HARROW AND CUTTER. — Thomas L. Flanagan, Vicksburg, Miss. This is a combination implement, capable also of use as a rake or cultivator, the main frame having an inner frame which can be raised and lowered, there being journaled in the latter frame shafts carrying sickle-like teeth with convex and concave edges, providing a durable machine which can be readily manipulated.

Miscellaneous.

CLOTHES LINE SUPPORT. — Henry Clayton, Hoboken, N. J., and Lewis Bried, Union Hill, N. J. This is a safety device consisting of a bracket plate adapted to be attached to a window jamb, with other novel features, for the support of the inner bight of an endless clothes line, whereby the placing of the washed goods on the line is made easy and safe, it being effected within the apartment through the window of which the line is extended.

CLOTHES DRIER. — William Holt, Milwaukee, Wis. This invention consists of a bracket on which is pivoted an adjustably held arm, while a cross bar supporting drying rods is fastened on the pivoted arm, forming a simple device which can be readily applied to a wall and conveniently folded up when not in use.

GAS STOVE BURNER. — Warren L. Cort, Brooklyn, N. Y. This burner is formed of two plates screwed or bolted together, and having upwardly extending and inwardly inclined waved edges, whereby a large amount of flame area is obtained in a given circle, to secure a high heat and the most complete combustion, without clogging or smoking, the device being simple and inexpensive.

WASHING MACHINE. — David D. Weisell, Fort Wayne, Ind. This invention provides a machine in which a tub or other receptacle has a concave false bottom, in which is revolved a self-adjusting conical rubber above the concave bottom, with gearing for operating the rubber, the machine performing all the operations of washing by hand, such as rubbing, pressing and rinsing.

SUSPENDERS. — Jacob Katzenburg, New York City. These suspenders have laterally curved shoulder straps each formed of a single piece, with back plates attached to the backs of the straps at their converging points, with cross lacings and covers, forming an inexpensive support for the trousers that will conform to the movements of the body of the wearer and fit easily.

VEHICLE WHEEL. — Henry Q. Maurino, Albuquerque, New Mexico. The hub of this wheel is

mainly metallic, and the hub box is engaged by a concentric sleeve whereon two loose hub sections are mounted, a radially undulating endless band being located between the hub sections and supported on spaced radial saddle frames, whereby the spokes are securely retained in the hub and adapted to be radially projected to tighten the wheel rim in the tire.

SYSTEM OF ROAD DRAINAGE. — Alexander Mitchell, Waldrip, Texas. The drain is arranged longitudinally under the roadbed, with outlet pipes at suitable distances, each adapted to be closed at its outer end, while branch pipes extend from the drain adapted to be connected with an air pump for pumping the air out of the drain, in order to quickly dry the roadbed after a heavy rainfall.

PAPER HOLDER AND CUTTER. — George M. D. Manahan, New York City. This is a device mainly designed for holding and cutting heavy rolls of wrapping paper, received with a close wrapper around them, the roll being supported to turn around a vertical axis while an upright cutter is arranged to cut or tear off the paper in desired lengths as it is unreeled from the roll.

GLAZIER'S DIAMOND. — John E. Lloyd, Brooklyn, N. Y. This invention provides an attachment readily applied to the ordinary diamond, whereby it may be conveniently used by an inexperienced person, the handle and block of the tool automatically assuming the proper angle for successful work the moment the diamond is placed on the glass and pressure is exerted.

STOPPING SEAMS IN DRILL HOLES. — Matthias Garvey, Hammondville, N. Y. This invention covers a method of stopping veins leading to drill holes by depositing a cartridge of paraffine in the hole and then applying pressure to the top of the cartridge to compress it and force the paraffine into the vein, the cartridge being of such size as to extend above the vein.

AIR GUN. — Stephen D. Engle, Hazleton, Pa. This invention covers an improvement in air guns in which the air by which the projectile is expelled is compressed by a spring-actuated plunger, the invention embracing novel features of construction in a gun of few parts, not liable to get out of order, easily operated, and by which a missile is expelled at high speed and with great precision.

NOTE.—Copies of any of the above patents will be furnished by Munn & Co., for 25 cents each. Please send name of the patentee, title of invention, and date of this paper.

SCIENTIFIC AMERICAN BUILDING EDITION.

DECEMBER NUMBER.—(No. 62.)

TABLE OF CONTENTS.

- 1. Plate in colors, illustrating a handsome residence at Plainfield, N. J., erected at a cost of \$20,000. Perspective elevation, floor plans, sheet of details, etc. Messrs. Rossiter & Wright, New York, architects.
2. Handsome colored plate showing a summer cottage recently erected at Grand Point, Mich., from plans furnished by Munn & Co., New York. Floor plans, perspective view, sheet of details, etc. Cost complete \$1,200.
3. The Mackley Public Library Building at Muskegon, Mich.
4. An attractive and economical church for a country village. Cost \$5,000, perspective view and ground plan.
5. A cottage at West Brooklyn, N. Y. Floor plans and photographic view. Estimated cost \$2,500.
6. Country house at Wayne, Pa. Cost complete \$9,000. Perspective elevation and two floor plans.
7. An attractive cottage in Buena Park, Chicago. Estimated cost \$4,500. Photographic view and two floor plans.
8. Residence at Graceland, Chicago. Estimated cost \$4,000. Photographic view and two floor plans.
9. Photographic view and two floor plans of a handsome residence at Auburn Park, Chicago. Estimated cost \$7,000.
10. A picturesque example of a bungalow at Bellagio. Cost £900. R. A. Briggs, London, architect. Plans and elevation.
11. Attractive country house at Naberth Park, Pa. Cost complete \$18,000. Two photographic views and floor plans.
12. Miscellaneous contents: Some of the merits of the ARCHITECT AND BUILDERS EDITION OF THE SCIENTIFIC AMERICAN.—How to catch contracts.—Improve your property.—The education of customers.—The SCIENTIFIC AMERICAN a help to builders.—Setting back houses in new streets.—Plumbers' materials.—"Adamant" wall plaster.—Inside window blinds, illustrated.—Employers' liability and accident insurance.—An improved scroll saw, illustrated.—Embellishments of suburban station grounds.—Repeated building from the same plans.—Mortar colors for builders.—Builders' ornamental iron work.—Improved spring hinges, illustrated.—Improved two-speed boring machine, illustrated.—Oil and wax in painting.—Mineral wool in house construction, illustrated.

The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Forty large quarto pages, equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural publication in the world. Sold by all newsdealers.

MUNN & CO., PUBLISHERS, 361 Broadway, New York.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

For Sale.—New and second hand iron-working machinery. Prompt delivery. W. P. Davis, Rochester, N. Y. Help in your studies. I. D. Boyer, Dayton, O.

Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J. For best hoisting engine. J. S. Mundy, Newark, N. J. Licenses granted to use the plaster mould illustrated on page 388 of this issue. Address inventor.

An inventive young mechanic would like to hire to an inventor. L. S. Tuttle, E. Moriches, L. I., N. Y. Steam Hammers, Improved Hydraulic Jacks, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

Best Ice and Refrigerating Machines made by David Boyle, Chicago, Ill. 155 machines in satisfactory use.

Power presses and dies. Also contractors for special machinery. T. R. & W. J. Baxendale, Rochester, N. Y.

Drop Forgings. Bronze Forgings. Upward of 3,000 different articles. Billings & Spencer Co., Hartford, Conn.

"How to Keep Boilers Clean." Send your address for free 96 p. book. Jas. C. Hotchkiss, 120 Liberty St., N. Y.

Screw machines, milling machines, and drill presses. The Garvin Mach. Co., Lighthouse and Canal Sts., New York.

Best driers for grain, sand, clay, fertilizers, wet feed, green coffee, etc. Send for illustrated price list. S. E. Worrell, Hannibal, Mo.

Split Pulleys at low prices, and of same strength and appearance as Whole Pulleys. Yocum & Son's Shafting Works, Drinker St., Philadelphia, Pa.

Rubber Belting, all sizes, 77 1/2 per cent from regular list. All kinds of Rubber Goods at low prices. John W. Buckley, 156 South Street, New York.

Guid & Garrison, Brooklyn, N. Y., manufacture steam pumps, vacuum pumps, vacuum apparatus, air pumps, acid blowers, filter press pumps, etc.

Wanted.—A man experienced in the manufacture of cutlery to act as foreman in a shop making patent shears. Address R. S. Pearsall, Sea Cliff, L. I., N. Y.

For low prices on Iron Pipe, Valves, Gates, Fittings, Iron and Brass Castings, and Plumbers' Supplies, write A. & W. S. Carr Co., 138 and 140 Centre St., New York.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4; Munn & Co., publishers, 361 Broadway, N. Y.

Wanted.—By an experienced electrician, position in charge of laboratory or of department for the development of new inventions. Address "Expert," care Scientific American, New York City.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information, and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all, either by letter or in this department, each must take his turn. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(2655) E. P. H. asks (1) how to burnish photographs. A. Use a burnishing machine sold by dealers in photo. materials. 2. How hot do you heat the burnisher? A. Heat the iron until the finger previously dipped in water sizzles when in contact—about the same as flat irons are treated. 3. What is used for a lubricator? A. John R. Clemons, an authority, recommends in Wilson's Photographics the following lubricator:

- A. Paraffine..... 8 drs. Benzine..... 10 oz.
B. In a mortar grind Gum ammoniac..... 30 grs.

and add alcohol sufficient to keep the gum from sticking to the pestle. Add A and B together, shake well, and apply with a flannel rag or sponge. 4. Will you recommend some book (suitable for the amateur photographer) that is up to the very latest development of the art? A. The "Amateur Photographer," by E. J. Waller.

(2656) J. M. G. asks (1) how to mix one gallon of paint that will be fireproof. A. There is no fireproof paint. Probably as good an approach as any would be oxide of iron (metallic) paint. Some books give a whitewash under this title. 2. A receipt to stop hair from falling out of the head, in which there is no dandruff. A. See our SUPPLEMENT, Nos. 388 and 396. 3. How to cure chapped hands? A. Try camphor ice, rubbed on at night, with gloves worn over it. 4. How to kill fleas on a collie dog (long hair). A. Try Persian powder or buhach. 5. A good book on bookkeeping. A. We recommend Bryant & Stratton's "New Counting House Bookkeeping," price \$2.50, which we can supply by mail.

(2657) J. F.—The metallic-looking spots on the samples of silver paper sent we think are due to an unfiltered bath, as there is a scum which settles thereon, no matter how long it may be sunned. Filter through cotton just before using, and sprinkle the floor before hanging up to dry. Sometimes particles of pyrogallol or iron dust in the air cause the spots.

(2658) B. S. H. asks: 1. Is there as much strength in a hollow cast iron column of any thickness of shell as there is in a solid one? A. There is greater strength in a hollow column of proper proportions than in a solid column of equal weight. 2. Is there as much strength in a pulley with straight arms as one with crooked? A. The straight-armed pulley of the same weight is stronger than with curved arms. The curve is put in pulley arms to prevent shrinkage cracking.

(2659) W. H. H. says: I have been told that oak fence posts should be cut during the summer or while the sap is up to insure their lasting. Are there any reliable data on the subject? A. Trees of any kind should be cut in the fall or winter in middle and northern latitudes, or at the fall of the leaf, for natural preservation.

TO INVENTORS.

An experience of forty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

December 9, 1890.

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

Table listing inventions with patent numbers and names of inventors. Includes items like: Advertisements, apparatus for displaying, C. O. Radde; Air motor, W. Scarthbury; Animal trap, C. R. Jenne; Animals, mouth opener for, J. D. Halfpenny; Anti-friction box, E. B. Lake; Asbestos, treating, L. L. Roberts; Axle and hub, wagon, E. W. Cooke; Axle box, H. M. Goodman; Axle box and journal bearing, C. E. W. Cooke; Axle box, car, E. W. Cooke; Axle box, car, D. Weir; Axle box for vehicles, H. M. Goodman; Axles, machine for turning, P. K. Hughes; Bag holder, A. P. O'Brien; Bags, finger hook for chataine, D. M. Read; Bags, snap catch for, D. M. Read; Band, safety, C. B. Simpson; Bar, See Velociped handle bar; Baseball cover, B. F. Shibe; Battery, See Galvanic battery. Secondary battery; Bearing boxes, machine for making wrought metal, P. H. Fontaine; Bearing, roller, E. W. Cooke; Bearing, wheel, W. F. Hoyt; Bed bottom, spring, T. E. O'Brien; Bed lounge, W. W. Kinkaid; Bell, electric, Beers & Tuttle; Belt shifter, Jackson & Whitcomb; Belt stretching machine, A. E. Peterson; Belt tightener, Corl & Porr; Bevel, W. Quayle; Bicycle seat, child, J. H. Sager; Bit, See Bridle bit; Bituminous rock, asphalt, etc., apparatus for reducing, laying, and rolling, J. B. Jardine; Block, See Ceiling block; Blowpipe, L. M. Mathews; Boiler, See Hot water boiler. Tubular boiler. Wash boiler; Boiler feeder, C. B. Bosworth; Boiler tube scraper and cleaner, H. S. Ingalls; Bolt locking device, C. I. Penrose; Book, W. N. Gunderson; Book, manifold memorandum, C. E. W. Cooke; Book, manifold memorandum, W. W. O'Hara; Book, sample, A. L. Rinco; Book trimming machine, C. Seybold; Books, pamphlets, etc., adjustable binder for, A. Koss; Boot or shoe rubbing-in machine, Gaquin, Jr., & Nott; Boot or shoe sole protector, A. F. Schurr; Bottle crate, L. M. Nemon; Bottle holder, nursing, J. Von Huppmann-Vallia; Bottle necks, tool for forming, H. L. Phillips; Box, See Anti-friction box. Axle box. Casting box. Fire alarm signal box. Journal box; Box stay machine, J. A. Horton; Boxes, machine for applying fastening strips to, G. L. Jaeger; Brace, See Car brace. Railway brace; Bracelet, watch, T. G. Hull; Bracket, See Gas bracket; Brake, See Car brake; Brake heads to brake beams, device for securing, H. B. Robischung; Bran packer, N. C. Gaunt; Brick kiln, L. H. Reppell; Brick machine, W. H. Hall; Brick machine pitmen, automatic releasing device for, W. H. Hall; Bridge guard, W. C. Newman; Bridge suspension, J. Harper; Bridle bit, C. H. Horner; Buckle, J. A. Traut; Buckle shield, F. D. Behrens; Buildings, structure of, M. Hellinger; Burner, See Hydrocarbon oil burner. Lamp burner. Oil burner. Stove burner; Butter worker, G. H. Pounder; Calendar, E. C. Ryer; Camera, See Photographic camera; Can, E. W. Spear; Can body making machine, M. Jensen; Can nozzle, oil, F. J. Deverall; Case and umbrella, combined, C. H. Morgan; Car brace, coal and freight, J. Rhoades; Car brake, Moore & Norwood; Car coupling, T. Barnes; Car coupling, J. Brown; Car coupling, R. H. Dowling; Car coupling, J. S. Haller; Car coupling, C. A. Magne; Car coupling, G. H. Williams; Car door, Wagner & Seath; Car fender, street, L. H. Leber; Car, railway, E. M. Boynton; Car register, H. C. Mages; Car step, extension, W. N. Candee; Car, stock, J. R. Wilson; Car ventilator, passenger, C. B. Hutchins; Cars, rail brake for street, C. W. Powell; Cars, self-adjusting fender or guard for railway, Fulman, Jr. & Whitmarsh; Caramels, etc., tray for holding, O. B. Weaver; Cart, road, T. C. Munz; Case, See Fishing rod case; Cash register, L. Ehrlich; Cash registers, rotary drawer for, W. G. Latimer; Casting apparatus, stereotyp, J. R. Cummings; Casting box, stereotype plate, J. H. Stonemetz; Casting tubular ingots, apparatus for, J. B. D. Boulton; Ceiling block, H. T. Paiste; Celery banking machine, E. A. Dewey; Centrifugal separator, F. M. & D. P. Sharples; Chain, ornamental, Beals & Thomas; Chain wrench, G. W. Bufford; Chair, See Folding chair; Chair seat, M. Herz; Cheese, shelf for supporting, J. J. Singley; Chest, See Four chest; Chimney, A. Gusdorf; Chromates, making, W. J. A. Donald; Chuck for screw machines, C. L. Libby.
