

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in next issue.

For Sale—New and second hand iron-working machinery. Prompt delivery. W. P. Davis, Rochester, N. Y. Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J. Barrel, Keg, and Hogshead Machinery. See adv. p. 189. For best hoisting engine. J. S. Mundy, Newark, N. J.

Consulting engineer, mechanical drawing and designing. H. S. De Forest, 126A Liberty St., New York.

Best Ice and Refrigerating Machines made by David Boyle, Chicago, Ill. 155 machines in satisfactory use.

The Improved Hydraulic Jacks, Punches, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York.

Engineers, firemen, machinists, send for circular of "Zwicker's Instructor." Geo. A. Zeller, St. Louis, Mo.

Screw machines, milling machines, and drill presses. The Garvin Mach. Co., Laight and Canal Sts., New York.

Beach's Improved Pat. Thread Cutting and Diamond Point Lathe Tool. Billings & Spencer Co., Hartford, Ct.

"How to Keep Boilers Clean." Send your address for free 96 p. book. Jas. C. Hotchkiss, 120 Liberty St., N. Y.

Split Pulleys at low prices, and of same strength and appearance as Whole Pulleys. Yocum & Son's Shafting Works, Drinker St., Philadelphia, Pa.

Guid & Garrison, Brooklyn, N. Y., manufacture steam pumps, vacuum pumps, vacuum apparatus, air pumps, acid blowers, filter press pumps, etc.

For low prices on Iron Pipe, Valves, Gates, Fittings, Iron and Brass Castings, and Plumbers' Supplies, write A. & W. S. Carr Co., 133 and 140 Centre St., New York.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4; Munn & Co., publishers, 361 Broadway, N. Y.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(2976) A. C. asks: 1. Is an iron casting containing from 40 to 60 per cent of steel (or vice versa) of any commercial value as scrap? A. Yes. 2. Is it possible to decarbonize foundry irons by the Bessemer or any other process? If not, why? A. Yes; but they may not be well adapted for it, as not being pure enough, etc. 3. Why will steel scrap produce slag in a cupola and not in a covered crucible? A. In the cupola it is mixed with the ashes of the coal, which have to be slagged off, and it also needs slag to protect it from oxidation. In a covered crucible there is no impurity to be disposed of, and the steel is protected from oxidation. 4. In the manufacture of steel car wheels are the wheels cast from new steel, made in a converter? A. Casting direct from a converter has had very little success hitherto, in account of blowholes in the metal. 5. Is not the presence of blowholes in steel castings due more to the lack of pressure on the castings rather than to impurities in the metal? A. Blowholes are due to the low degree of fluidity of melted steel, and only to a limited extent to impurities. 6. What work is there on the manufacture of steel castings that you could recommend as being thoroughly up to the times? A. We highly recommend our SUPPLEMENT, No. 692, as well as many others to be found indexed in our new catalogue of SUPPLEMENTS. Also Howe's "Metallurgy of Steel," \$10 by mail.

(2977) J. N. H. asks: 1. In what ratio is the time in which no current is passing to the time in which a current is passing in an alternating current? A. The time when no current is passing is almost zero. As the current rises and falls, and changing in direction rises again, the zero phase is indefinitely short in duration. The full discussion is quite complicated. 2. How can the lines of force about a certain magnet be calculated? A. By determining the adhesion of an armature, or by determining the E. M. F. produced by cutting the lines with a coil of given size, or by producing the lines and determining the E. M. F. produced in a coil of known size. 3. What is meant by the "torque" of an armature? A. The turning moment or couple, the product of the pull upon the armature by its effective radius tending to produce rotation. 4. What is a "cushion tire" on a bicycle? A. A hollow tire, giving greater extent of cushioning than the ordinary solid rubber tire.

(2978) C. H. asks: 1. What kind of battery would be most satisfactory and economical to run a motor to furnish 1/4 horse power? A. Probably a Bunsen battery is the best for your purpose. You will find it a troublesome and expensive power. 2. How many cells would be required. A. Enough to give 373 watts through zero external resistance, say 24 one quart cells. 3. How long would they furnish the required current at one charging? A. With ordinary use they will work for 50 or 60 hours with one full charge and an additional renewal of the bichromate solution. 4. What

makes the bones of canned salmon so soft and brittle? A. The canning process, and action of the ingredients.

(2979) N. E. C. asks: What is the difference between air pressure at sea level and one, two, three, four and five thousand feet elevation respectively? And, what the difference in the volume of air at sea level and the above elevations? A. Taking the height at sea level as 30 inches, at 5,000 feet it is 24.773; at 10,000 feet, 20.459; at 15,000 feet, 16.896; at 3 miles, 16.361; at 6 miles, 8.923; at 9 miles, 4.866; at 15 miles, 1.448. As a rough approximation, allow one inch to one thousand feet. The volume of the air is in inverse ratio to the height of the barometer.

(2980) A. F. asks (1) if there is anything he can put on boots and shoes to make them water-proof? A. Beef tallow 4 ounces, resin 1 ounce, beeswax 1 ounce, melt together and add an equal quantity of neat's foot oil. Rub in while warming the shoe at a fire. 2. How can I take spots out of clothes, black worsted. It is a lightish spot, and I think it is grease. A. Use benzine, applying in a ring around the spot and finally to the spot itself. 3. How can I make cloth water-proof? A. Melt in paraffin wax with a hot iron. 4. I have a scar on my chin; how can I take it off? A. It is probably impossible to remove completely; consult a physician.

(2981) H. A. S. asks what the boiling points for oils of spruce (Abies nigra) and tamarack (Larix Americana). A. The specific gravity of these oils varies from 0.850 to 0.890; they boil from 300° to 320° Fah., are very slightly soluble in water, sparingly in alcohol, readily in ether.

(2982) M. F. asks how to transfer lithographs to glass. A. Varnish the glass with dammar varnish or Canada balsam. When dry, soak the picture in water for some hours. When the glass is nearly dry, smoothly press the wet picture upon it, being careful to exclude all air bubbles. When all is dry, rub off the paper with the wet finger, dry, and revarnish.

TO INVENTORS.

An experience of forty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

April 14, 1891.

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

Table listing inventions and their inventors, including: Adjustable bracket, Nacke & Brinkmann; Alarm, See Burglar alarm; Animal trap, Murphy & Lennon; Annunciator, heat, A. Reinemann; Arm, artificial, T. Sparham; Armature, L. C. Atwood; Automatic lubricator, C. A. Pierce; Axle car, L. Hall, Jr.; Axle lubricator, C. W. Brewer; Axle nut, vehicle, J. Hansen; Baby jumper, R. Billeaux; Badge, campaign, H. Phillips; Baling press, W. H. Howard; Baling press, J. E. Sanford; Banjo, C. A. Woodhull; Bar, See Car draw bar; Barrel hooping machine, W. H. Potter; Barrel washing machine, M. Gottfried; Bathing appliance, F. W. Ostrom; Batteries, porous cell for galvanic, W. Burnley; Battery, See Galvanic battery; Bedstead, wardrobe, N. G. Aukier; Bell, W. A. Lutzgen; Bell and indicator, electric call, W. Cox; Bell, door, Allen & Goulden; Bin, See E. Canada; Blacking case, J. M. Wheeler; Blind pulley, Venetian, J. G. Wilson; Blind, window, G. W. Morstatt; Board, See Ironing board; Bobbin or spool, J. L. Cheney; Bolt, See E. Canada; Bolt wrench, J. E. Hoffman; Bolting machine, O. Esche; Book and tally sheet, poll, H. M. Geiger; Books, etc., apparatus for marbleizing or ornamenting, Zichtl & Brecht; Boring and mortising implement, C. Reed; Bottle stopper, E. P. Bowditch; Box, See Cask box; Folding box; Letter box; Paper box; Signal box; Stuffing box; Bracket, See Adjustable bracket; Brake, See Car brake; Locomotive driver brake; Brick or tile machine, J. C. Titus; Bridge wall, tubular, J. R. Walsh; Brush, blacking, R. L. Stevens; Buckets, soap dish and brush holder for scrub, C. A. Inglis; Buckle, D. L. Smyth; Bungee wrench, J. E. Hoffman; Burglar alarm, C. R. Canterbury; Butter extractor, centrifugal, A. Wahlin; Butter, manufacturing, G. H. Hamrick; Butter tub, G. Smith; Button, F. E. Williams; Button, loop, G. Heuser; Cabinet for holding time cards, etc., U. M. White; Cabinet, office, J. W. See; Cable covering machine, J. D. Bishop; Cable covering press, C. H. Matchett; Cake turner, R. W. Stephens; Camera, Blair & Crowell; Can capping machine, J. C. Winters; Can filling apparatus, Many & Harrison; Cane holder, M. V. Voncher; Cane and table, combined, O. N. Kuhl; Car brake, automatic, A. J. Rosentreter; Car, cattle, F. E. Canada; Car coupling, J. F. Ankerstein; Car coupling, T. E. Askew; Car coupling, R. Chandler; Car coupling, C. E. C. Edey; Car coupling, J. Green; Car coupling, J. E. Williams; Car coupling, Murphy & McCarthy; Car coupling, Thomas & Littlejohn; Car coupling, J. Simms; Car door, freight or grain, G. C. Dougherty; Car door, grain, C. A. Schreyer; Car draw bar, J. M. Maxwell; Car, electric motor, F. A. Pocock; Car, stock, G. D. Burton; Car, vestibule, H. Tanner; Cars, fender or safety attachment for electric or other, D. Kines; Cars, safety gate for street, F. C. Calkins; Cars, switch device for street, J. Youna; Carriage, child's folding, F. Bornemann; Cartridge filler, D. L. Llewellyn; Cartridge, paper shell, J. Gardner; Case, See Blacking case; Cigar case; Clock case; Cash drawer and recorder, P. Westphal;

Table listing inventions and their inventors, including: Cash register, H. Cook; Cash register and indicator, H. Cook; Cash register and indicator, Manko & Paine; Cattle guard, C. O. Davidson; Ceiling, metal, J. B. Wilson; Chamfers, producing, J. L. Dalton; Chart holder, C. H. Congdon; Chimney thimble, C. F. Green; Cigar case, A. H. Hiestanz; Circuit closer, W. C. Johnston, Jr.; Clasp, See Jewelry's clasp; Clasp, See Shoe clasp; Cleaner, See Grain cleaner; Coal case, H. S. Prentiss; Coal or grain bin, W. Walker; Cook box, stop, E. F. H. Capron; Coffee or tea pot, E. D. Wheelwright; Collar fastener, horse, J. Thielens; Comb, See Curry comb; Toilet comb; Combination lock, S. K. Weymuth; Composition of matter, W. W. Dunnett; Compound engine, A. J. Pitkin; Corn crib and granary, portable, C. I. Cook et al.; Corn crib, portable, Cook & Britton; Corn popper, H. B. Yaryan; Corner strap, M. E. McMaster; Cotton gins, roll box for, Fraser & Stewart; Cotton paper and chopper, combined, C. C. Chappel; Coupling, See Car coupling; Hose coupling; Radiator coupling; Thill coupling; Vehicle reach coupling; Crushing and pulverizing machine, W. H. Howland; Cultivator and thinner, cotton, F. L. Studer; Cultivator, garden, C. S. Norcross; Cultivator, barrow, and seeder, C. C. Hair; Curry comb, J. Du Shane; Curve scriber, W. Gardner; Cut of metal, E. A. W. Jones; Cutter, See Metal cutter; Deodorizing compound, F. Jantz; Desk, adjustable folding, J. H. Fry; Door check, H. A. J. Rieckert; Door hanger, C. W. Bullard; Door spring, H. W. Warden; Dress skirt gauge, C. H. Trotter; Drill, See Grain drill; Seed drill; Dry kiln for malting, J. Kam; Dumb waiter, T. Coldwell; Dust collector, C. W. Cooper; Dust collector, L. M. Morse; Dust collector, D. A. Ward; Egg poacher, J. P. Eustis; Electric cable holder, J. W. Marsh; Electric lighting, making filaments for, S. F. Van Choate; Electric machine, J. B. Collins; Electric motor, pulsating current, C. J. Van Depeole; Electric motors, automatic switch for, F. E. Whipple; Electric signal, R. Grushow; Electric signal, R. Adam & Knapp; Electric wire connection, E. J. Gately; Electric wire support, Lieb & Lavens; Electrical distribution system of, C. J. Van Depeole; Electro magnetic reciprocating engine, C. J. Van Depeole; Electro-therapeutic apparatus, regulator for, J. H. Davis; Elevator, C. R. Pratt; Engine, See Compound engine; Electro magnetic reciprocating engine; Gas engine; Engine, portable, steam, S. H. Pitkin; Engines, machine for boring the cylinders of steam, G. H. Corliss; Engines, machine for finishing side flanges of cylinders of steam, G. H. Corliss; Engines, machine for finishing the ends of cylinders of steam, G. H. Corliss; Engines, treating the cylinders of steam, G. H. Corliss; Eraser, ink, W. H. Robinson; Exercising apparatus, neck, T. Peterson; Explosives, apparatus for making dope for, J. C. Schaeffer; Extractor, See Butter extractor; Fan, rotary, R. Godfrey; Fare registering apparatus, Deneker & Erhardt; Faucet, registering beer, J. A. Durnbaugh; Feed regulator and register, W. C. Newman; Feed water purifier, H. Warden; Fence post, C. H. Gersch; Fence weaving machine, H. Haynes; Fertilizer distributor, Cook & Patric; Fertilizer distributor, J. R. McCord; Fertilizer, phosphatic, J. Reese; Fire alarm, telephone system, S. W. Ludlow; Fire extinguisher, automatic, Kreitz & Rosenbusch; Fire extinguishing system, automatic, Knowles, Jr., & Young; Fire protector, W. F. Bean et al.; Fire sprinkler, automatic, J. P. Byers; Fire tank, See Cask; Fish hook, J. M. Munn; Fish preserve dam, S. McElroy; Float, C. Frattini; Flower stand, folding, C. A. Gibford; Flushing tanks, siphon for, H. P. Cope; Food preserver, N. J. Camp; Fumigating compound, Morris & Chenevert; Furnace grate, Z. F. Bryant; Gauge, See Dress skirt gauge; Galvanic battery, W. A. Crowder; Game apparatus, E. S. Boynton; Gas burner, R. A. Camp; Gate, See Railway gate; Swinging gate; Wire gate; Gate, A. W. Graham; Gearing, frictional, G. W. Soule; Generator, See Steam generator; Governor, E. H. Deane; Governor for steam engines, shaft, C. B. Mohr; Governor, steam engine, J. Harrold; Grain binder, A. E. Woodhouse; Grain cleaner, F. M. Shaw; Grain drill, A. L. & D. L. Baughman; Grain elevator, H. Dege; Grate, W. E. Kelly; Grinding attachment, M. Raymond; Grooving machine attachment, G. A. Kennedy; Guard, See Cattle guard; Snow guard; Gun barrels, fastening device for, G. W. Alley; Gun barrel, H. Bradshaw; Gun sight, adjustable, W. L. Marbia; Gun tool, C. C. E. Tomlinson; Gymnastic live ball, T. Peterson; Hame attachment, W. B. Abrams; Hanger, See Door hanger; Harrow, H. Bradshaw; Harvester attachment, J. E. Beehler; Harvester, corn, A. A. Lundy; Harvester, cotton, J. A. House; Harvester, stalk fodder, H. F. Longworth; Harvesters, tension device for self-binding, M. S. Hargrave; Hat blocking machine, W. H. Pittilla; Hat fastener, W. H. Thompson; Hitching device, F. Sweetland; Hoisting machine, J. L. Dean; Holder, See Candle holder; Chart holder; Electric holder; Umbrella holder; Tool and work holder; Hook, See Fish hook; Hook, H. H. McLean; Hops, apparatus for extracting, J. Schneider; Horses, foot rasp for, G. Tompkins; Horseshoe machine, J. Bucklin; Horseshoe making machine, Z. V. Purdy; Hose nozzle and coupling, reversible, A. B. Poans; Hot air register attachment, J. Sezal; Hub and axle, vehicle, I. M. Warner; Ice freezing machine, C. C. Smith; Injector, J. Trux; Inkstand, fountain, C. W. Rohrkaste; Insulation of armatures for dynamo-electric machines, R. Eickemeyer; Insulator, electric wire, D. A. Bertolette; Iron, stone, etc., composition for treating, G. B. Smith; Ironing board, J. F. White; Jewelry's clamp, E. N. Parker; Key, H. E. Russell, Jr.; Key fastener, J. Ford; Kettle and steamer, sectional odorless, C. S. Dunham; Kettle cover, O. E. Harmon; Knife sharpener, C. B. Bradford; Knitting machine, circular, J. H. Hinchliffe; Lamp, F. S. Delenbaugh; Lamp extinguisher, A. G. Howde; Lamp lighting mechanism, W. D. Morenus; Lantern, tubular, L. F. Betts;
