

Scientific American.

ESTABLISHED 1845.

MUNN & CO., Editors and Proprietors.

PUBLISHED WEEKLY AT

No. 361 BROADWAY, NEW YORK.

O. D. MUNN.

A. E. BEACH.

TERMS FOR THE SCIENTIFIC AMERICAN.

One copy, one year, for the U. S., Canada or Mexico. \$3 00
One copy, six months, for the U. S., Canada or Mexico. 1 50
One copy, one year, to any foreign country belonging to Postal Union. 4 00

Remit by postal or express money order, or by bank draft or check.
MUNN & CO., 361 Broadway, corner of Franklin Street, New York.

The Scientific American Supplement

is a distinct paper from the SCIENTIFIC AMERICAN. THE SUPPLEMENT is issued weekly. Every number contains 16 octavo pages, uniform in size with SCIENTIFIC AMERICAN. Terms of subscription for SUPPLEMENT, \$5.00 a year, for U. S., Canada or Mexico. \$6.00 a year to foreign countries belonging to the Postal Union. Single copies, 10 cents. Sold by all newsdealers throughout the country. See prospectus last page.

Building Edition.

THE ARCHITECTS and BUILDERS EDITION OF THE SCIENTIFIC AMERICAN is a large and splendid illustrated periodical, issued monthly, containing floor plans, perspective views, and sheets of constructive details pertaining to modern architecture. Each number is illustrated with beautiful plates, showing desirable dwellings, public buildings and architectural work in great variety. To builders and all who contemplate building this work is invaluable. It has the largest circulation of any architectural publication in the world.

Spanish Edition of the Scientific American.

LA AMERICA CIENTIFICA E INDUSTRIAL (Spanish trade edition of the SCIENTIFIC AMERICAN) is published monthly, uniform in size and typography with the SCIENTIFIC AMERICAN. Every number of La America is profusely illustrated. It is the finest scientific, industrial trade paper printed in the Spanish language. It circulates throughout Cuba, the West Indies, Mexico, Central and South America, Spain and Spanish possessions wherever the Spanish language is spoken. \$3.00 a year, post paid to any part of the world. Single copies 25 cents. See prospectus.

MUNN & CO., Publishers, 361 Broadway, New York.

The safest way to remit is by postal order, express money order, draft or bank check. Make all remittances payable to order of MUNN & CO. Readers are specially requested to notify the publishers in case of any failure, delay, or irregularity in receipt of papers.

NEW YORK, SATURDAY, MAY 16, 1891.

Contents.

(Illustrated articles are marked with an asterisk.)

Autotomy in animals. 312
Bottles, glass, cutting. 305
Bronze, liquid. 311
Buzs, chinch, destruct. 313
Butterflies, green. 312
Caterpillars stop trains. 313
Chalk, phosphatic, English. 309
Electricity, domestic. 310
Elephant, usefulness. 312
Empress of Japan, steamer. 311
Federation, employers'. 311
Fruits, fertilization of. 309
Ginseng, taxes on. 309
Health, to preserve. 305
Healthy at 104. 305
Homeopathy, Milton's. 309
Institute, watchmakers'. 310
Iron, large run of. 305
Jack screw, Kalbar's. 306
Knowledge, sci. and prac. 311
Lenses, special, in photo. 304
Light effect on spines. 312
Locomotive, breathing of. 305
Locusts, peculiar. 312
Lock, an ancient. 308
Machine for chamfering stone. 306
Dale's. 306
Magnesia, superimposed. 312
Malaria, mysteries of. 310
Manometer, "dew"\*. 308
Maynard, Dr. Edward. 304
Mercury, Russian. 309
Monitors, hydraulic. 308
Navy, American. 313
Navy, German. 305
Notes, natural history. 312
Omnibus, electric. 306
Paper making, advance in. 306
Potash of Hindostan\*. 311
Plants, deserting. 313
Porcelain, firing. 311
Pratt, Charles. 304
Rebuilding while afloat. 312
Road, cable, N. Y. City\*. 303, 310
Saw for steel. 309
Seals in Behring Sea. 304
Seaports, our defenseless. 304
Soil, odor of the. 308
Spiders, protective mimicry. 312
Telegram, damages for non-delivery. 310
Telephone, London to Paris. 308
Tin, history of. 305
Toads, poison of. 312
Trade mark—generic name. 304
Tree, tallow, China. 310
Worm, cut, remedy. 313
Water, drawing. 311
Wells, electrical. 311
Well, a deep. 304
Wells, artesian. 306
Wrench, Chaney's. 306
Zeal more than discretion. 312

TABLE OF CONTENTS OF SCIENTIFIC AMERICAN SUPPLEMENT No. 802.

For the Week Ending May 16, 1891.

Price 10 cents. For sale by all new-dealers

I. ELECTRICITY.—An Incandescent Lamp Factory in the Northwest.—By W. FORMAN COLLINS.—Description of a new industry of Wisconsin.—A great lamp factory at Appleton, Wis.—Details of the methods adopted for manufacturing lamps. 12813
On Variational Electric and Magnetic Screening.—By Sir W. THOMSON.—A very curious investigation into the properties of imperfectly conducting electric screens.—1 illustration. 12814
The Electrical Utilization of Water Power.—By MADISON BULL.—Numerous instances of utilization of water power by means of electric transmission, showing the world's work in this important line. 12815
Underground Conduit for Electric Railways.—A conduit protected against the entrance of water.—An ingenious system for keeping the conductor dry.—1 illustration. 12815
II. ENTOMOLOGY.—Report on Insects.—First instalment of a report by Prof. C. H. FERNALD, of the Massachusetts Agricultural College, Amherst, Mass., and from other sources upon injurious insects and methods of destroying and holding them in check.—8 illustrations. 12818
III. GEOLOGY.—Gold in Columbia.—An interesting communication concerning gold in the two Columbias, British Columbia and the United States of Columbia.—With valuable data and accounts of processes adopted by the natives. 12816
IV. MECHANICAL ENGINEERING.—The Builders of the Steam Engine.—The Founders of Modern Industries and Nations.—By Dr. R. H. THURSTON.—Prof. Thurston's address at the centennial celebration of the American patent system.—A very valuable tribute to the scientific work of the world and the methods guiding scientific men. 12806
V. MEDICINE.—The Treatment of Tuberculosis.—French investigations on the cure of tuberculosis by transfusion of blood.—Remarkable results attained.—1 illustration. 12822
VI. MISCELLANEOUS.—The Matteawan Asylum for the Criminal Insane.—A New York State asylum, built for the protection of the criminally insane.—Its great size and general description of its arrangements. 12810
California Oranges.—The cultivation and gathering of oranges in California.—Graphic accounts of the industry, with statistics and data. 12818
VII. NAVAL ENGINEERING.—The Royal Sovereign.—A description of the largest battleship hitherto constructed for the British navy.—(General dimensions, armament, and weights.—1 illustration. H. M. S. Royal Arthur.—A first class protected cruiser recently launched at Portsmouth.—Description of her armament and general features of construction.—1 illustration. 12808
VIII. PHOTOGRAPHY.—Photographic Perspective and the Use of Enlargement.—A rational examination of the photographic reproduction of landscapes.—Some of the peculiar appearances investigated. 12813
IX. PHYSICS.—Baroscopic Thermometer.—A thermometer working by changes of position brought about by shifting of its center of gravity.—Formulae of its construction and theory.—2 illustrations. Van't Hoff's Law of Osmotic Pressure.—By D. J. CARNEGIE.—Some exceedingly remarkable results obtained from investigation of molecular pressure.—The indication of dissociation in solution.—A most remarkable and startling possibility.—4 illustrations. 12820
X. TECHNOLOGY.—The Practical Application of Magnesia Cement.—By CARL OTTO WENIG.—A valuable contribution to the theory of oxychloride of magnesia cements.—Examination of the well known Sorel's cement, and conditions for obtaining therefrom the best results.—Applications in which this cement may be of value. 12811
Whisky.—Fusel oil in whisky and notes on the Scotch and Irish manufacture of the liquor. 12821
XI. ZOOLOGY.—Some of the Most Interesting Specimens Recently Added to the London Zoological Society's collection from the upper regions of the Himalayas.—1 illustration. 12813

DEFENSELESS CONDITION OF OUR SEAPORTS.

The need of fast war vessels was well illustrated by the recent incident in the harbor of San Diego, when a Chilean cruiser belonging to the insurgents entered the bay, anchored, took on board recruits, supplies of provisions, ammunition, and then sailed away. This ship, under the laws of nations, was in fact a piratical vessel, and as such was seized by the government authorities at San Diego, and a United States marshal placed on board in possession. But the Chilean rebels paid no attention to the laws of the United States; they may be said to have captured the place. When they had obtained all the supplies they wanted to assist them in carrying on war against a friendly nation, they upheaved anchor and steamed away, carrying off as a prisoner the official representative of the great republic. This was a small ship called the Itata, carrying four guns.

Report has it that the government is mildly indignant at this occurrence, and has ordered the United States war ship Charleston, at San Francisco, to sail in pursuit of the Itata and recapture her if possible. Allowing this could be done, and the Itata could be destroyed, it might be dangerous to attempt it. The Chilean rebels would be maddened and might retaliate. There is nothing to prevent them from sending in other boats to capture or bombard San Diego or other towns along the coast. Indeed, while the Itata was taking on supplies at San Diego, other vessels of the rebels were hovering outside the harbor.

We have no navy worthy of the name, and nearly all our seaports are without proper defenses. Like San Diego, they are at the mercy of any single piratical boat that chooses to enter. This is a very humiliating position for a country like ours to be placed in. The indifference of Congressmen to the naval defense of the country is astounding. They waste their time over party squabbles, vote billions of money for schemes intended to help bring votes to their respective sides on election day; but as to the immediate creation of an enterprising, prompt and effective navy, which is of vast importance to the country, but little is done, and that little very slowly. All told, we have a pair of small torpedo boats, half a dozen or so of smaller cruisers, and an equal number of larger vessels.

There should be fifty ships where now there is one. Every harbor in the country should be guarded by efficient sentinels consisting of vessels of high speed, ready for instant action, to maintain and enforce the authority of the republic.

CHARLES PRATT.

On the evening of May 4, Charles Pratt, eminent as a philanthropist of the best type, died from a sudden attack of heart disease. While much that he did in the endowment and support of institutions is known and has made him famous as one of the world's benefactors, a great deal of the good he performed was known to few besides himself. Thus it is said that his last business transaction before he died was the signing of a check, as a donation to the Brooklyn Board of Charities.

He was born in Wilbraham, Mass., October 2, 1830. At the age of 19 he engaged in the paint and oil business, beginning at the foot of the ladder. As one of ten children he was obliged to work for his own support, and succeeded so well that in 1857 he was able to come to this city and start as a member of the firm of Devoe, Reynolds & Pratt. This firm dealt in paints and oils. Soon afterward Mr. Pratt started on his own account in the refining of petroleum. His brand of kerosene, known as astral oil, is known everywhere. Later his firm was absorbed by the Standard Oil Company. Of the latter corporation Mr. Pratt was a leading member up to the day of his death.

His great wealth was devoted largely to the cause of education. The Adelphi Academy, of Brooklyn, N. Y., practically owns him as its father. He found it a private school, and by his donations, and advice and direction, brought it up to the standard of a high grade incorporated literary and scientific college. His donations to this cause exceed a quarter of a million of dollars. A few years ago the Pratt Institute, of Brooklyn, for manual training and scientific instruction generally, was opened to the public. This was entirely his creation. It is familiar to our readers, having been illustrated in this paper. Upon the Pratt Institute over one million of dollars was spent by its founder. Large additions to the Institute were contemplated, which it is to be hoped may yet be carried out.

Upon the principle of the Peabody buildings in London, Mr. Pratt established a large flat house in the Greenpoint district of Brooklyn. It is 200 by 135 feet in size and contains 120 suites of rooms upon its six floors. The building affords homes at moderate cost. It contains a reading room and library for the use of the occupants. The income derived from it was devoted to the maintenance of the Pratt Institute.

What other plans Mr. Pratt had in view for the future is uncertain. The work of his life is of double importance. It has brought about abiding and permanent good and has set a noble example for others to follow.

DR. EDWARD MAYNARD.

Dr. Edward Maynard died on May 3, aged 78 years. A dental surgeon by profession, he won a high standing among his co-practitioners. Some of his work is to-day a standard, and he introduced several new operations in dentistry. Originally a candidate for the West Point United States Military Academy, his delicate health prevented his completing the course. This episode presumably turned his mind to arms, and his reputation as an inventor of fire-arms became widely spread. In 1845 he patented the tape system of primers to take the place of the ever-troublesome percussion cap, an immense advance over the old system. In 1851 he invented the breech-loading rifle that bears his name, subsequently improved and patented at various dates, and forming one of the basic improvements in the development of the metallic cartridge breech-loader of to-day.

One interesting invention was for application to double-barreled guns, allowing each barrel to expand or contract independently of the other, thus preventing the expansion of one barrel when fired or when exposed to the sun from warping the other. As late as 1886 he patented an indicator for magazine rifles, to show at a glance the number of cartridges they contain.

Many other inventions in ammunition and fire-arms were made by him. He presented the interesting example of a man winning high eminence in two widely different fields of work. Various honors were offered him by foreign potentates. The Emperor of Russia, Nicolas I., appointed him court dentist. In the other field of work he was honored by the Kings of Belgium, Sweden and Prussia. He occupied the chair of theory and practice in the Baltimore College of Dental Surgery, and also in the dental department of the National University, Washington, D. C.

The Fur Seals in Behring Sea.

Every spring the seals appear in droves from their unknown winter quarters, and settle down on the Pribilof Islands, some 200 miles away from the mainland of Alaska. The males come first, accompanied by the young seal pups born during the previous summer, and choose their respective homes on the rocks. The females follow three weeks later—week little creatures, in steel gray garb, very different from the big brown male seals, with their fighting propensities. Often one seal possesses twenty wives, and he has hard task to defend his home and family from his neighbors. Indeed, the old seals fight like furies, becoming covered with scars and terrible wounds, and sometimes losing an eye or part of a flipper in the fray. Most of the fighting is done with the mouth. The combatants approach each other with averted heads and sly looks, till suddenly they utter a shrill piping whistle, and engage with their sharp canine teeth, the hair flies and the blood flows amid much furious bellowing. The young bachelors—from one to five years old—herd together in their own quarters at a respectful distance, till they are strong enough to fight for wife and home.

A Deep Well.

Some time ago the Wheeling Development Company began drilling a well near Wheeling, W. Va., in search of petroleum or natural gas. The hole has now reached a depth of 4,100 feet. In this distance several veins of coal have been passed, and both oil and gas have been struck, but not in paying quantities. The hole is 8 inches in diameter. It is reported that Professor White, State geologist of West Virginia, has succeeded in interesting the officers of the United States Geological Survey in the exploration, and that the hole is to be continued to a depth of 1,000 feet more, or as far as is practicable, with the idea of making investigations of temperature and magnetic conditions.

Trade Mark—Generic Name.

The Supreme Court of Illinois held, in the case of Bolander vs. Peterson, that a generic name, or one merely descriptive of the article made or sold, or its qualities, ingredients or characteristics, and which may be employed truthfully by other makers or dealers is not entitled to protection as a trade mark, and that words designating a trade indicating that a particular class of goods is dealt in cannot be exclusively appropriated by one as a trade mark or trade name. In this case it was held that the words "Swedish snuff store," or "magazine," could not be protected.

Spectacle Lenses in Photography.

Mr. Lyonel Clark says fair results can be obtained by fixing two meniscus spectacle lenses in a tube, with their concave sides facing each other, and with a suitable diaphragm between them. His general conclusion was that they would not work well enough to cause photographic opticians to put up their shutters, but would do a certain amount of useful work, especially in the hands of those photographers who, on æsthetic grounds, do not like prints sharp all over.
