Elwell, The giant planet then reaches that point in his vast warranted to smooth out all wrinkles and make the of Chicago, Ill., and the Geological Society of America, orbit when he is nearest the sun, being 42,000,000 miles skin as soft as a baby's.

two events, and Jupiter adorned the sky with a majestic grace that Venus at her brightest could scarcely surpass. He is in quadrature on the 15th, being 90° west of the sun. He then rises about midnight, and will be a superb object to those who watch for his ad-

The moon, on the day of her last quarter, is in close conjunction with Jupiter on the 16th, at 6 h. 26 m.

The right ascension of Jupiter on the 1st is 1 h. 24 m.,

Jupiter rises on the 1st at 0 h. 14 m. A. M. On the

is evening star. He is in conjunction with Venus on the 1st at 2 h. 50 m. A. M., being 4° 36' north. He is at his greatest eastern elongation on the 29th, at 3 h. A. M., being 27° 14' east of the sun, and is visible to the naked eye in the west as evening star. As his northzon only an hour after sunset, it will be difficult to find him unless observers are enthusiastic and possess unusually good eyesight.

The right ascension of Mercury on the 1st is 7 h. 40 m., his declination is 23° 22' north, his diameter is 5".2, and he is in the constellation Gemini.

Mercury sets on the 1st at 8 h. 23 m. P. M. On the 31st he sets at 8 h, 11 m, P. M.

are based on these facts. The sewage is delivered make a majestic appearance as he comes into view his July course, and when the month closes he sets two over the surface of the land and allowed to percolate above the southeastern horizon on July evenings, mar-hours later than the sun. The moon is in conjunction through it. If supplied in proper quantity, the nitri-velous in size, glowing with ruddy light, and brilliant with Saturn on the 28th, at 0 h. 1 m. A. M., being 1° 39' north

> The right ascension of Saturn on the 1st is 11 h. 43 m., his declination is 4° 15' north, his diameter is 16".0, and he is in the constellation Virgo.

> Saturn sets on the first at 11 h. 12 m. P. M. On the 30th he sets at 9 h. 19 m. P. M.

She is in inferior conjunction with the sun on the 9th, relli, Perrotin, Terby, and Stanley Williams. It must at 1 h. 24 m. P. M., closing her brilliant career as evening star and commencing an equally brilliant course as morning star. She takes a low rank on the July wars are being fought, and sulphuric acid is being the year. The planet is small and traveling rapidly away as observers who are early risers may see for them-

> The right ascension of Venus on the 1st is 7 h. 36 m., her declination is 18 50 north, her diameter is 57 0.

Venus sets on the 1st at 7 h. 59 m. P. M. On the 31st she rises at 2 h. 58 m. A. M.

URANUS

noonday, being 90° east of the sun. The moon makes a close conjunction with Uranus on the 3d, at 4 h. 3 m. The moon increases the interest aroused by the near P. M., being 47 north. She makes a second conjunc-

Uranus sets on the first at 0 h, 37 m.

34 m., his declination is 20° 27', his diameter is 2".6, and he is in the constellation Taurus.

Neptune rises on the 1st at 2 h. 35 m. A. M. On the 31st he rises at 0 h. 40 m. A. M.

Mars, Jupiter, and Neptune are morning stars at the beginning of the month. Mercury, Venus, Saturn, and Uranus are evening stars.

Ovid's Recipe for Wrinkles.

Take equal parts of bean and barley meal and mix with raw egg. When the mass is thoroughly hard and
