

but great caution should be used in heating small, close rooms as stated, with closed door and window, when occupied. Bed rooms that are damp may be warmed and then ventilated with safety before going to bed.

(4551) A. R. H. says: Please inform me if you can compress water in a boiler when testing a boiler by cold water. When the boiler is full and I put my gauge on, do I not compress the air that is in the water when I start force pump, instead of the water? When filling boiler I am letting air out of the steam dome, and after the same is full I attach my gauge. Do I not displace air when more water enters the boiler? A. Water is slightly compressible, but not enough for observation in testing a boiler, because the elasticity of the metal in the shell allows it (the shell) to stretch more than the compressibility of the water. The air that may accidentally lodge at the irregularities in the shell, as well as the air mixed with the water, all help to make the gauge show compression. The pipe leading to the gauge is also liable to be filled with air, which also contributes to the apparent elasticity of the contents of the boiler.

(4552) I. G. B. says: It is said that the sun is on the meridian of any place but four times a year at 12 o'clock. That is sun and clock agree only at those times, which are 15th of April, 15th of June, 1st of September, and 25th of December. The question is why those particular days? Whereabout is the earth in its orbit on those days? A. The variation of the sun from mean clock time is a gradually increasing and decreasing amount from its perihelion and aphelion points due to the elliptic form of the earth's orbit, which alone would make but two terms in the yearly variation of time. The effect of the obliquity of the ecliptic so changes this condition that the combined sums and differences make four times in a year at which solar and clock or mean time agree as stated in your query. The sun is in perihelion about the 25th of December, and in aphelion about the 15th of June. As the velocity of the earth in the perihelion half of its orbit is greater than that in the aphelion half, so the curves of time difference are greater in the first and last quarter of the year, as shown in your almanac.

(4553) C. & L. ask: What is the cause of the moon's appearing of a reddish hue sometimes at its rising? To what is ascribed the enlarged form of the moon at times of rising? A. The red appearance of the moon and sun at rising and setting is caused by the unequal absorption by the atmosphere of the colored rays, which are combined in white light, the colored rays having the shortest wave lengths being first absorbed. The violet, indigo, blue, green, when the fading yellow gives the sun and moon the orange hue and occasionally a strong red. It is the vastly increasing distance that the light travels in the atmosphere on the horizon that causes absorption. The sun looks red at noon time through considerable depth of water. The increased diameter is only apparent, an illusion of eye. The measured horizontal diameter is the same as at higher altitudes.

(4554) E. A. McG. asks: 1. What is the buoyant force or negative weight of one cubic foot of hydrogen gas, of coal gas, of a vacuum, in ounces or pounds, taking the density of the air at sea level as a basis? A. There is no such thing as negative weight. In air at the sea level hydrogen has a buoyancy of about 70 pounds to 1,000 feet, and coal gas one-half as much. 2. How much stronger would a vessel containing hydrogen have to be, to resist its expansive force at a height of 10,000 feet, than at sea level, and what is the ratio of expansive force developed as it ascends? A. At the height named hydrogen or any gas inclosed at the sea level would exert a pressure of about 5 pounds to the square inch. The exact ratio can only be expressed by a complicated formula. 3. Is aluminum manufactured in any considerable quantities? If so, where, and what is about its value in the United States per pound? A. Yes; in Pittsburg and in other places. It is worth in quantities about \$1.50 per pound.

(4555) T. W. writes: I am desirous of learning what agent I must employ to etch or rather engrave on hard sheet rubber, in the manner that nitromuriatic acid acts on zinc, i. e., I wish to cover the rubber sheet with a coating of wax, soap or like matter, then scratch the desired lines into the said coating and apply to the lines such a liquid as will eat into rubber in the exposed places. A. Aside from the sand-blast method we know of no way of etching vulcanite or hard India rubber. An impression can be produced by a die or engraving pressed upon it while heated to 212° Fah. If the surface is now smoothed off and exposed to heat, the lines of compression will swell or expand again, and thus give a relief plate. See SCIENTIFIC AMERICAN SUPPLEMENT, No. 252.

(4556) E. N. A. asks how to make Pharaoh's serpents. A. These are little cones of sulphocyanide of mercury which, when lighted, give forth a long, serpent-like, yellowish-brown body. Prepare nitrate of mercury by dissolving mercury dioxide in strong nitric acid as long as it is taken up. Prepare also sulphocyanide of ammonium by mixing 1 volume sulphide of carbon, 4 strong solution of ammonia, and 4 alcohol. This mixture is to be frequently shaken. In the course of about two hours, the bisulphide will have been dissolved, forming a deep red solution. Boil this until the red color disappears and the solution becomes of a light yellow color. This is to be evaporated at about 80° Fah. until it crystallizes. Add little by little the sulphocyanide to the mercury solution. The sulphocyanide of mercury will precipitate, the supernatant liquid may be poured off, and the mass made into cones of about 1/8 inch in height. The powder of the sulphocyanide is very irritating to the air passages, and the vapor from the burning cones should be avoided as much as possible. To ignite them set them on a plate or the like, and light them at the apex of the cone.—From the "Scientific American Cyclopaedia of Receipts, Notes and Queries."

(4557) P. A. F.—For Silvering Brass.—The first essential is that the metal be chemically clean, which is best done by the use of dilute nitric acid, followed by a wash with clean water, and then with dilute aqua ammonia, drying in sawdust. If the metal be then

rubbed with chloride of silver dissolved in ammonia and then washed and again dried in sawdust, the result will be fine. It should, however, be immediately lacquered in order to preserve the surface. The chloride of silver is preferable to the nitrate. No battery is used. Or for thin plating dissolve in 10 or 12 drops of water and add nitrate of silver, 2 parts, cyanide of potassium 6 parts. Rub on the object.—Desilvering.—The following is a liquid which will dissolve silver without attacking copper, brass, or German silver, so as to remove the silver from silvered objects, plated ware, etc. It is a mixture of 1 part of nitric acid with 6 parts sulphuric, heated in a water bath to 160° Fah., at which temperature it operates best.

(4558) J. L. C. and F. P. ask how to make oleate of soda referred to oleate of soda, referred to page 162 of the SCIENTIFIC AMERICAN. A. To make the pure acid, 2 ounces of pure soap (almond oil is the best, but Castile will answer) are dissolved in 20 ounces of boiling water. One ounce of sulphuric acid, previously diluted with 2 ounces water and allowed to cool, is added. The fatty acids rise to the surface in an oily layer. The water is siphoned off, and they are washed three times with boiling water. The mass is allowed to cool, and is removed from the surface of the water, where it floats. It is weighed, mixed with 1/2 its weight of litharge, and heated (212°-225° Fah.) until complete combination is effected. This may be known by the cessation of any evolution of bubbles from the mass. The resulting lead plaster is allowed to stand mixed with 10 to 15 times its weight of ether in a tightly corked bottle until completely disintegrated. Then it is filtered, and to the filtrate hydrochloric acid is added as long as any lead is precipitated. The ethereal solution is poured off, and the ether recovered by distillation, leaving pure oleic acid. Two fl. drms. of the acid is added to somewhat less than 1 pint of boiling water, and solution of caustic soda very carefully added, drop by drop, until complete solution of the acid is effected, very carefully avoiding an excess of soda, and after cooling, water is added to make it measure just 1 pint. A standard soap solution is thus obtained. To this add 1/2 its bulk of the best glycerine. Shake long and well, and the mixture is ready for use.—From the new "Scientific American Cyclopaedia of Receipts, Notes and Queries."

SCIENTIFIC AMERICAN BUILDING EDITION.

OCTOBER NUMBER.—(No. 84.)

TABLE OF CONTENTS.

1. Elegant plate in colors, showing a handsome residence at Belle Haven Park, Greenwich, Conn., recently erected at a cost of \$18,000 complete. Floor plans and two perspective elevations. Messrs. Lamb & Rich, architects, New York.
2. Plate in colors showing an elegant residence at Montclair, N. J. Perspective view and floor plans. Cost \$7,000 complete. Mr. E. T. Hapgood, architect, New York. An excellent design.
3. A house at Montclair, N. J. Two perspective views and floor plans. Cost \$4,750 complete. E. T. Hapgood, architect, New York.
4. A Queen Anne cottage recently erected on Chester Hill, Mount Vernon, N. Y., at a cost of \$5,000. Floor plans, perspective elevation, etc.
5. A house for two families erected on Armory Hill at Springfield, Mass., at a cost of \$7,000 complete. Mr. F. R. Richmond, architect, Springfield, Mass. An excellent design. Floor plans and perspective.
6. A model dwelling at Holyoke, Mass. A unique design. Perspective elevation and floor plans.
7. A small cottage and separate summer kitchen. Perspective views and floor plan. Cost for both buildings, about \$1,600.
8. The parsonage at Montclair, N. J., built for the Congregational Church. Cost complete \$15,000. J. C. Cady & Co., architects, New York. Perspective view and floor plans.
9. A handsome residence at South Orange, N. J. Floor plans and perspective elevation.
10. A cottage at Fanwood, N. J., erected at a cost of \$5,166 complete. Perspective elevation and floor plans.
11. Portal of the church of Moret-sur-Loing, France.
12. Illustrations of two handsome English country houses.
13. Miscellaneous contents: The coming age of marble.—White brick.—How to keep out the heat in summer and to keep it in in the winter.—House moving.—Tempering tools.—Closet door fastenings.—A right-of-way may be built over.—Stanley plumbs and levels, illustrated.—Safety crane, illustrated.—An improved range and heater, illustrated.—Railway window sashes.—A great tunnel.—Inside sliding blinds, illustrated.—About floors.—A fine steel ceiling, illustrated.—An improved door hanger, illustrated.
The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Forty large quarto pages, equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.
The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural publication in the world. Sold by all newsdealers.
MUNN & CO., PUBLISHERS, 361 Broadway, New York.

TO INVENTORS. An experience of forty years, and the preparation of more than one hundred thousand applications for patents abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS For which Letters Patent of the United States were Granted September 27, 1892,

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

Aerating liquids, method of and apparatus for, J. H. Minto. 483,259
Annunciator, electrical, N. H. Raymond. 483,310
Atomizer, H. M. Dunlap. 483,435
Axe, coat of, F. W. Corrigan. 483,210
Auger, earth, Clark & Keefer. 483,300
Ax-helve attachment, W. Donlon. 483,248
Axle, J. Herby. 483,444
Axle box, E. N. Wood. 483,372
Axle, car, R. L. McLaren. 483,470
Axle, car, R. M. Lawless. 483,385
Axle lubricator, I. P. & H. A. Wendell. 483,333
Axles, journal bearing for car, P. Sweeney. 483,405
Baby jumper, W. S. Totball. 483,270
Bag fastener, B. L. Hubert. 483,450
Beehive, J. Conser. 483,157
Beer cooling, F. W. Corbin. 483,305
Bell, Bevin & Wells. 483,341
Bell, J. C. Wells. 483,332
Bell, electric, N. H. Raymond. 483,309
Bell, gong, W. S. Ham. 483,149
Beverage of fermented and unfermented wort, making the same, E. Adam. 483,337
Beverages, making malt, E. Adam. 483,338
Bicycle, W. O. Wakefield. 483,273
Bicycle support, F. Gleason. 483,146
Bill holder, E. M. Wiley. 483,412
Binder, hand, A. Morris. 483,408
Block, H. A. Westerson. 483,350
Blasting powder, F. Auchman. 483,125
Block. See Chain block.
Boiler. See Locomotive steam boiler.
Boiler, E. H. Scribner. 483,369
Boilers by gaseous fuel, apparatus for heating, J. B. H. H. 483,352
Bolting or sifting machine, C. Hagenmacher. 483,286
Boot or shoe heels, attaching, H. A. Webster. 483,233
Box. See Garbage box. Paper box.
Brake. See Car brake. Sleigh brake.
Bridges, guard gate for draw, W. Herrick. 483,445
Bridge attachment, J. W. Peace. 483,472
Broiler, C. E. Walling. 483,400
Brush, scrubbing, Beilmann & Levi. 483,128
Brush, tanner's sique, C. Grau. 483,350
Buckle, E. J. Kraetzer. 483,356
Building front, sheet metal, C. D. Pruden. 483,193
Buildings, electric facing for, L. L. Sagendorph. 483,240
Burl basket, Jones & Myers. 483,304
Butter worker, H. J. Anderson. 483,201
Can. See Fruit can.
Car brake, J. W. Barnes. 483,414
Car bundle rack, J. M. Cotton. 483,283
Car coupling, E. Gean. 483,437
Car coupling, Wilks & Whitus. 483,194
Car coupling, R. M. Woodard. 483,196
Car couplings, pin lifter for, Wilks & Whitus. 483,193
Car draught and dust guard, E. B. Jones. 483,382
Car dump, M. W. Iles. 483,152
Car guard, railway, P. Barron. 483,322
Car starter, D. Fuller. 483,349
Cars, means for dumping, W. E. Ludlow. 483,360
Card shuffling and dealing mechanism, W. H. Ranney. 483,364
Carriage for elevated ways, transfer, H. B. Tefft. 483,183
Case. See Luggage carrier. Reel carrier.
Cash register and indicator, H. Cook. 483,511
Casting apparatus, sash weight, J. Carter. 483,208
Catalogue, library, A. J. Rudolph. 483,313
Cementing machine, W. Robertson. 483,367
Chain block, J. R. Moran. 483,161
Chain, hedge, F. M. Edge. 483,347
Chain wrench, W. H. Brock. 483,419
Chairs, fan attachment for rocking, H. M. Baker. 483,413
Chimney cap, J. Keane. 483,384
Chuck, pinion, G. B. Woodruff. 483,195
Churn power, W. T. Brown. 483,134
Chute, coal, G. E. Stuebner. 483,404
Cigar lighter, F. Michl. 483,464
Cigarette machine, H. S. Grace. 483,380
Clamp. See Hose clamp.
Clasp. See Glove cord clasp.
Cleaner. See Window cleaner.
Clever, H. 483,221
Cloth winding machine, J. Conn. 483,510
Clothes drier, H. Adler. 483,275
Clothes line, J. W. Cadwell. 483,299
Clutch, friction, P. Weber. 483,370
Collar, O. K. Little. 483,228
Colors, making azo, D. A. Rosenstiel. 483,368
Colter, plow, G. A. Lambert. 483,457
Conveyer, T. L. Marvel. 483,232
Conveyer, continuous trough, J. Pollock. 483,475
Corn shears, extension feed for, W. M. Rush. 483,239
Corking machine, J. White. 483,192
Cotton gin, S. Z. Hall. 483,216
Counterbalancing collar, W. T. Webb. 483,411
Coupling. See Car coupling. Thill coupling.
Wire coupling.
Cranes, brake for drums of overhead traveling, J. Hand. 483,407
Crank securing means, F. H. Boite. 483,342
Crib and chair, combined infant's, H. A. Hayden. 483,218
Crutch or cane tip, W. L. Scoville. 483,174
Cutter. See Meter cutter.
Cycle wheel, C. E. W. Woodward. 483,373
Desk cover, E. Bennett. 483,129
Desk closer, E. W. Dally. 483,140
Door closer, gravitating, H. Scheewind. 483,163
Door lock, sliding, A. B. Pfullman. 483,326
Doors, mechanism for operating and locking jail, C. H. Spear. 483,178
Drainage system, J. & F. H. Nicholson. 483,236
Draw bar carrier iron, Minton & Douglas. 483,465
Drier. See Clothes drier.
Earring, T. F. Gaynor. 483,214
Electric cable, T. Guilleaume. 483,285
Electric cut-out and switch box, L. D. McMunn. 483,235
Electric heater, P. A. Hearn. 483,124
Electric meter, A. G. Waterhouse. 483,189
Electric motor, W. M. Dresskell. 483,431
Electric snap switch, S. F. Alden. 483,316
Elevator. See Water elevator.
Elevator, C. M. Bartholomew. 483,277
Elevators, E. H. 483,145
Elevator door operating apparatus, D. Tufts. 483,407
Elevator gearing, N. C. Bassett. 483,203
Elevator shafts, device for closing, N. J. Blagen. 483,416
Embossing machine, Crahan & Nesom. 483,247
Engine. See Steam engine.
Engine driving mechanism, road, C. F. Christopher. 483,261
Exhibitor, button, S. T. Mosser. 483,469
Extension table, C. W. Munz. 483,361
Fence, P. Trick. 483,186
Fence gate, wire, P. Hack. 483,351
Fence, hedge, J. Harshbarger. 483,322
File or index, continuous, A. J. Randolph. 483,312
Filter, Lockstaedt & Gubbins. 483,238
Filter, oil, J. S. Hall. 483,148
Fire escape, P. Lynch, Jr. 483,463
Fire extinguisher, automatic gravity, T. F. Hand. 483,491
Floor scraping machine, F. C. Schroeder. 483,173
Flume gate, S. M. Irvin. 483,455
Foot rest and shoe stool, Stone & Campbell. 483,403
Fruit can or jar, J. M. Barnhart. 483,415
Fumes, device for collecting metallic, Sheedy & Fumigator. 483,176
Furnace, P. A. Hoffman. 483,484
Furnace. See Smoke consuming furnace.
Gauge. See Liquid gauge.
Galley, self-locking job, N. G. Duffy. 483,434
Game apparatus, F. E. Knight. 483,324
Garbage box, J. Harshbarger. 483,492
Gas compressor, A. Siebert. 483,292
Gas governor, mercurial, Higgins & Smith. 483,517
Gas manufacture of, R. M. Bidelman. 483,489
Gate. See Fence gate. Flume gate. Tilting gate.
Gate, E. K. Plumbly. 483,387
Gate, T. M. Smith. 483,398
Glove cord clasp, A. E. McDonald. 483,263
Grading machine, C. Lampitt. 483,226

Grain meter, oscillating, H. H. Boenker. 483,417
Grate, portable, D. H. Watts. 483,410
Grinding machine, A. Fryer. 483,249
Grinding machine, A. E. Landis. 483,288
Grinding mill, J. E. Overpeck. 483,368
Guard. See Axle dust guard. Car guard. Key-hole guard.
Gun, magazine, A. Lindner. 483,229
Gun, spring air, W. F. Markham. 483,158
Handle, D. A. & H. C. Moore. 483,460
Hanger. See Lamp hanger.
Harmonica, O. Meine. 483,166
Harrow, C. A. Anderson et al. 483,217
Harrow, W. Richards et al. 483,501
Harvester, traveling, B. Holt. 483,449
Heater. See Electric heater.
Heel stinger machine, A. H. Thompson. 483,184
Hogheads or barrels, construction of, A. Schmidt. 483,478
Hoisting apparatus, W. J. Kayser. 483,323
Hoisting machine, W. H. Rickabach. 483,391
Holdback, J. H. Logan. 483,325
Holder. See Bill holder. Lid holder. Ring holder. Padholder. Trunk strap holder.
Hook. See Davit hook.
Horse checking device, I. Labelle. 483,306
Horse hitching device, J. H. Quinton. 483,514
Horseshoe, G. T. Chapman. 483,209
Hose clamp, A. R. Dickinson. 483,302
Hose reel, H. C. Arnold. 483,390
Ice, apparatus for cooling water in the manufacture of, A. Smith. 483,397
Implement, hand, M. Ryan. 483,477
Ink, C. M. Higgins. 483,446
Insecticide distributor, R. J. Talley. 483,448
Ironing table, W. G. Lindoy. 483,490
Ironing table, folding, Hill & Frey. 483,353
Jack. See Pegging jack.
Jar. See Packing jar.
Key. See Musical instrument key.
Keyhole guard for padlocks, J. V. Carvell. 483,345
Kitchen cabinet, F. Holmes. 483,219
Kneader or mixer, dough, A. Dugry. 483,430
Lamp, J. Kirby, Jr. 483,155
Lamp, Argand, F. Rhind. 483,167
Lamp burner attachment, J. King. 483,253
Lamp hanger, C. E. Hilliard. 483,448
Lamp, hanging, W. G. Ormsby. 483,380
Lamp roller, B. A. Thomas. 483,242
Lantern, signal, G. A. Bischoff. 483,507
Latch and lock combined, J. E. Armstrong. 483,318
Lid holder for pans or vessels, E. E. Ward. 483,408
Light, fixtures, adjustable canopy for, E. C. Schell. 483,171
Light, magnifying globe for the diffusion of artificial, H. Elardige. 483,482
Liquid gauge, C. Pinel. 483,455
Lobster trap, Palmer & Watrous. 483,471
Lock. See Door lock.
Lock, H. B. Westerson. 483,350
Lock, B. Goldenberg. 483,282
Locker for apparel, etc., J. M. Cotton. 483,204
Locomotive, electric, N. C. Bassett. 483,204
Locomotive steam boiler, G. J. Perkins. 483,473
Lubricator. See Axle lubricator.
Luggage carrier, S. Comstock. 483,346
Magnets, measuring the strength of, C. H. Rudd. 483,168
Mailing case, G. J. Johnson. 483,257
Marking material, package of, E. C. Hunt. 483,453
Mason's hawk, C. W. Blay. 483,132
Match card, friction, J. Pusey. 483,165
Match, flexible, J. Pusey. 483,166
Measuring apparatus, J. A. Trochu. 483,271
Measuring instrument, lens, M. J. Hinden. 483,354
Mechanisms, means for controlling the operation of, H. E. Vineing. 483,272
Metal heating, electric, C. L. Coffin. 483,426
Metallic strip, machine for twisting, E. Kuechle. 483,357
Metal working device, electric, C. L. Coffin. 483,424
Metal working, electric, C. L. Coffin. 483,427
Metallic covering plate, R. G. Westphalen. 483,243
Meter. See Electric meter. Grain meter. Piston meter.
Mill. See Grinding mill.
Millstone and making the same, Sturtevant & Ellis. 483,504
Millstones, making composite, T. L. Sturtevant. 483,179
Mining machine, J. L. Lechner. 483,156
Miter cutter, W. R. Fox. 483,436
Motion, device for converting, S. Sloan. 483,177
Motor. See Electric motor. Water motor.
Mower, lawn, W. A. Loud. 483,157
Multiple switchboards, test system for, O. A. Bell. 483,506
Multiple switchboards, test system for, C. E. Sturtevant. 483,175
Music rack, I. W. Zavadil. 483,244
Musical instrument key, L. K. Fuller. 483,378
Musical instrument, stringed, W. J. Cbristy. 483,136
Napkin ring and holder, combined, A. M. Spaulding. 483,331
Necktie, J. H. 483,215
Net fabrics, knot for, R. Semmler, Sr. 483,291
Net, fish, H. F. Smith. 483,400
Nut cracker, Wheeler & Sperry. 483,334
Nut lock, A. Stockdale. 483,241
Ordnance, breech-loading, S. Seabury. 483,267
Ordnance, means for opening heavy, F. Beck. 483,188
Package wrapper, W. J. Acheson. 483,198
Packing jar, J. W. Meyer. 483,258
Padlock, E. A. Judd. 483,383
Paint, fireproof, R. W. Lamprey. 483,307
Painting barbed wire fences, machine for, J. R. Smith. 483,503
Paper box, T. F. W. Schmidt. 483,329
Paper machine suction mechanism, J. Reynolds. 483,502
Paper machine suction roll, E. B. Benham. 483,340
Pegging jack, D. Whitlock. 483,191
Pelts, machine for removing water hairs from, J. Dech. 483,142
Phosphate rock, apparatus for treating, Hughes & Chisolm. 483,452
Photographic lenses, diaphragm for, E. R. Bullard. 483,135
Picture stretcher, folding, E. R. Butler. 483,280
Pipe, hedge, J. W. 483,347
Pipe and nut wrench, M. J. Wilson. 483,336
Pipe for the conveyance of liquids or gases, Walker & Shaw. 483,274

 SEND FOR CIRCULAR. CHICAGO, ILL.

TO BUSINESS MEN

The value of the SCIENTIFIC AMERICAN as an advertising medium cannot be overestimated. Its circulation is many times greater than that of any similar journal now published. It goes into all the States and Territories, and is read in all the principal libraries and reading rooms of the world. A business man wants something more than to see his advertisement in a printed newspaper. He wants circulation. This he has when he advertises in the SCIENTIFIC AMERICAN. And do not let the advertising agent influence you to substitute some other paper for the SCIENTIFIC AMERICAN, when selecting a list of publications in which you decide it is for your interest to advertise. This is frequently done for the reason that the agent gets a larger commission from the papers having a small circulation than is allowed on the SCIENTIFIC AMERICAN.
 For rates see top of first column of this page or address MUNN & CO., Publishers,
 361 Broadway, New York.

NOW READY!

A NEW AND VALUABLE BOOK.

THE SCIENTIFIC AMERICAN
 CYCLOPEDIA
 OF RECEIPTS,
 NOTES AND QUERIES.

12,000 Receipts. 680 Pages. Price \$5.

This splendid work contains a careful compilation of the most useful Receipts and Replies given in the Notes and Queries of correspondents as published in the Scientific American during the past fifty years; together with many valuable and important additions.

Over Twelve Thousand selected receipts are here collected; nearly every branch of the useful arts being represented. It is by far the most comprehensive volume of the kind ever placed before the public.

The work may be regarded as the product of the studies and practical experience of the ablest chemists and workers in all parts of the world; the information given being of the highest value, arranged and condensed in concise form convenient for ready use.

Almost every inquiry that can be thought of, relating to formulae used in the various manufacturing industries, will here be found answered. Instructions for working many different processes in the arts are given.

It is impossible within the limits of a prospectus to give more than an outline of a few features of so extensive a work.

Under the head of Paper we have nearly 250 receipts, embracing how to make paper mache; how to make paper water proof and fire proof; how to make sandpaper, emery paper, tracing paper, transfer paper, carbon paper, parchment paper, colored papers, razor stop paper, paper for doing up cutlery, silverware; how to make luminous paper, photograph papers, etc.

Under the head of Inks we have nearly 450 receipts, including the finest and best writing inks of all colors, drawing inks, luminous inks, invisible inks, gold, silver and bronze inks, white inks; directions for removal of inks; restoration of faded inks, etc.

Under the head of Alloys over 700 receipts are given, covering a vast amount of valuable information.

Of Cements we have some 600 receipts, which include almost every known adhesive preparation, and the modes of use.

How to make Rubber Stamps forms the subject of a most valuable practical article, in which the complete process is described in such clear and explicit terms that any intelligent person may readily learn the art.

For Lacquers there are 120 receipts; Electro-Metallurgy, 125 receipts; Bronzing, 127 receipts; Photography and Microscopy are represented by 600 receipts.

Under the head of Etching there are 55 receipts, embracing practical directions for the production of engravings and printing plates of drawings.

Paints, Pigments and Varnishes furnish over 800 receipts, and include everything worth knowing on those subjects.

Under the head of Cleansing over 500 receipts are given, the scope being very broad, embracing the removal of spots and stains from all sorts of objects and materials, bleaching of fabrics, cleaning furniture, clothing, glass, leather, metals, and the restoration and preservation of all kinds of objects and materials.

In Cosmetics and Perfumery some 500 receipts are given.
 Soaps have nearly 300 receipts.
 Those who are engaged in any branch of industry probably will find in this book much that is of practical value in their respective callings.

Those who are in search of independent business or employment, relating to the home manufacture of simple articles, will find in it hundreds of most excellent suggestions.

Send for descriptive circular.
