

Scientific American.

ESTABLISHED 1845.

MUNN & CO., Editors and Proprietors.

PUBLISHED WEEKLY AT

No. 361 BROADWAY, NEW YORK.

O. D. MUNN.

A. E. BEACH.

TERMS FOR THE SCIENTIFIC AMERICAN.

One copy, one year, for the U. S., Canada or Mexico.....\$3 00
 One copy, six months, for the U. S., Canada or Mexico..... 1 50
 One copy, one year, to any foreign country belonging to Postal Union. 4 00
 Remit by postal or express money order, or by bank draft or check.
 MUNN & CO., 361 Broadway, corner of Franklin Street, New York.

The Scientific American Supplement

is a distinct paper from the SCIENTIFIC AMERICAN. THE SUPPLEMENT is issued weekly. Every number contains 16 octavo pages, uniform in size with SCIENTIFIC AMERICAN. Terms of subscription for SUPPLEMENT, \$5.00 a year, for the U. S., Canada or Mexico. \$6.00 a year to foreign countries belonging to the Postal Union. Single copies, 10 cents. Sold by all newsdealers throughout the country. See prospectus, last page.
 Combined Rates.—The SCIENTIFIC AMERICAN and SUPPLEMENT will be sent for one year, to one address in U. S., Canada or Mexico, on receipt of seven dollars. To foreign countries within Postal Union, eight dollars and fifty cents a year.

Building Edition.

THE ARCHITECTS AND BUILDERS EDITION OF THE SCIENTIFIC AMERICAN is a large and splendid illustrated periodical, issued monthly, containing floor plans, perspective views, and sheets of constructive details, pertaining to modern architecture. Each number is illustrated with beautiful plates, showing desirable dwellings, public buildings and architectural work in great variety. To builders and all who contemplate building this work is invaluable. It has the largest circulation of any architectural publication in the world.
 Single copies 25 cents. By mail, to any part of the United States, Canada or Mexico, \$2.50 a year. To foreign Postal Union countries, \$3.00 a year. Combined rate for BUILDING EDITION with SCIENTIFIC AMERICAN, to one address, \$5.00 a year. To foreign Postal Union countries, \$6.50 a year. Combined rate for BUILDING EDITION, SCIENTIFIC AMERICAN and SUPPLEMENT, \$9.00 a year. To foreign Postal Union countries, \$11.00 a year.

Spanish Edition of the Scientific American.

LA AMERICA CIENTIFICA E INDUSTRIAL (Spanish trade edition of the SCIENTIFIC AMERICAN) is published monthly, uniform in size and typography with the SCIENTIFIC AMERICAN. Every number of *La America* is profusely illustrated. It is the finest scientific, industrial trade paper printed in the Spanish language. It circulates throughout Cuba, the West Indies, Mexico, Central and South America, Spain and Spanish possessions—wherever the Spanish language is spoken. \$3.00 a year, post paid to any part of the world. Single copies 25 cents. See prospectus.

MUNN & CO., Publishers,

361 Broadway, New York.

The safest way to remit is by postal order, express money order, draft or bank check. Make all remittances payable to order of MUNN & CO.
 Readers are specially requested to notify the publishers in case of any failure, delay, or irregularity in receipt of papers.

NEW YORK, SATURDAY, MAY 6, 1893.

TABLE OF CONTENTS OF SCIENTIFIC AMERICAN SUPPLEMENT No. 905.

For the Week Ending May 6, 1893.

Price 10 cents. For sale by all newsdealers.

I. ANTHROPOLOGY.—The Genealogy of Man.—By E. D. COPE.—A valuable contribution to this science, with numerous diagrams and illustrations.—16 illustrations.....	14465
II. ASTRONOMY.—A New Method of Observing the Solar Corona Without an Eclipse.—Application of fluorescent light in observing the phenomena of the corona.—2 illustrations.....	14463
Screens to Protect the Telescope from Wind Tremors.—A suggestion for the use of a net to cut off the force of the wind.....	14468
III. BOTANY.—Desmodium Owenianum.—A beautiful flowering plant described and illustrated.—1 illustration.....	14469
Swan Orchids.—A singular family of orchids.—1 illustration.....	14469
The Clove Industry of Zanzibar.—How cloves are grown, collected, and prepared for market.....	14469
IV. CHEMISTRY.—Action of Solutions on Glass.—Conclusions derived from chemical investigations on this subject.....	14465
Mr. Moissan's Experiments.—Moissan's electric furnace in the production of diamonds by its use.—3 illustrations.....	14463
The Decay of India Rubber.—By HENRY J. WILLIAMS.—The chemistry of India rubber and examination of its causes of deterioration.....	14464
V. HYGIENE AND MEDICINE.—Breathing in its Relation to Speaking and Singing.—By EDWIN H. VANDEUSEN.—A valuable and suggestive article on the proper lung action for singers and speakers.....	14460
The Physiological Action of the Active Principles of Urechites Suberecta.—By RALPH STOCKMAN.—A poisonous plant of the West Indies and the action of its poisonous principles on the human system.....	14461
VI. MECHANICAL ENGINEERING.—Fifteen Hundred Horse Power Triple Expansion Mill Engine.—Description of a pair of enormously powerful engines constructed for an English cotton mill.—1 illustration.....	14459
VII. METEOROLOGY.—A Typical Hurricane.—An immense hurricane on the North Atlantic, with tracings of its spiral course.—1 illustration.....	14468
Balloon Meteorology.—By Prof. CARL E. MYERS.—An interesting and graphic paper on the use of balloons in meteorological work.....	14467
VIII. MINING ENGINEERING.—Diamonds.—Diamonds of California and of other places compared with each other.....	14470
The Production of Platinum.—The Russian mines in the Ural Mountains, with statistics.....	14465
IX. MISCELLANEOUS.—Scientific Diversions.—A compressed air top and self-smoking pipe.—Two interesting experiments.—2 illustrations.....	14462
Writing and Sketching on the Screen.—The magic lantern pantograph and excellent effects produced by its use, with pandoscope or "drawing machine" slides.—2 illustrations.....	14462
X. NAVAL ENGINEERING.—The French Warship Magenta.—A famous warship of great fighting and ramming capacity.—1 illustration.....	14456
The Russian Battle Ship Sinepe.—One of the most powerful ships of the Black Sea fleet.—1 illustration.....	14456
The Santa Maria at New York.—Columbus' Ship as Reconstructed.—Illustration of the largest of the caravels.....	14457
XI. PHOTOGRAPHY.—Negatives from Paper Prints.—How to reproduce negatives which have been destroyed.—A valuable suggestion.....	14460
The Photographing of Interference Bands.—Valuable researches by Lord Rayleigh on ether waves.—1 illustration.....	14462
XII. PHYSICS.—On Cathodic Rays in Gases at the Atmospheric Pressure and in an Extreme Vacuum.—By Dr. PHILIP LEVARD.—New and suggestive researches upon the phenomena of Geissler tubes.—1 illustration.....	14464
The Caloric Value of Gas.—A simple method of determining this important factor.....	14465
XIII. TECHNOLOGY.—Ancient Egyptian Pigments.—Chemical examination of pigments recovered from the ruins of ancient Egypt.....	14458
The Photo-Mechanical Processes.—By S. R. KOEHLER.—Continuation of this article, treating of half-tone work and the production of relief blocks by the half-tone process.....	14456
Weiss Beer Brewing.—How weiss beer is made in this country.—6 illustrations.....	14458

OPERATIONS OF THE CANADIAN PATENT OFFICE.

We are indebted to the Minister of Agriculture of Canada for a copy of his report for the year 1892, which contains the proceedings of the Canadian Patent Office.

In Canada patents are granted very much on the same system as in this country, but the life of the patent is eighteen years, divided into three periods of six each, according to the amount paid by the applicant. Payments on the great majority of patents are not continued beyond the period of six years. An American patent that is not more than one year old can be patented in Canada, but it is necessary, in order to maintain the validity of the patent, that it shall be worked in Canada within two years.

In 1892 there were granted a total of 3,417 Canadian patents, of which 2,227 were taken by American citizens, 671 by Canadians, 298 by Englishmen, 106 by Germans, 26 by Frenchmen, and 89 by persons of other nationalities. It will thus be seen that nearly two-thirds of all the patents granted in Canada are to American inventors, and but for them the Canadian Patent Office would make a very poor showing. The entire receipts of the Canadian Patent Office were \$84,720, and the expenditures were \$39,643, leaving a profit of \$45,000 over expenses. It may be said that American inventors chiefly support the Canadian Patent Office as well as the Patent Bureau at Washington.

TREATMENT OF POTATOES TO PREVENT POTATO SCAB.

A recent number of the *Rural New Yorker* contains an article by H. L. Bolley, illustrated by photographs, showing the advantage of soaking the seed tubers in corrosive sublimate solution. The author says it has been demonstrated that the blackened, pock-marked condition of potatoes, commonly spoken of as potato scab, is due to the direct action of a parasitic cause which not only originates disease on the tubers, but also affects the roots and bases of the vines. The disease is propagated in the new crop from that on the seed tubers, and the author claims that, if the tubers are treated with the substance mentioned, the plants will be free from the disease.

Photographs are given of potatoes grown without having the seed tubers treated and those that were treated. The treated seed yielded potatoes that were clean and free from disease. The treatment is easy of application and the yield is increased. The seed tubers were soaked for one and one-half hours in a one-thousandth solution of corrosive sublimate. The author claims that the ordinary method of spraying the vines is simply a waste of energy, as the inception of the disease is from below.

OPENING OF THE WORLD'S COLUMBIAN EXPOSITION, CHICAGO, MAY 1, 1893.

The formal dedication of the Exposition buildings in October last was attended with much pomp and ceremony. It was, therefore, decided that the exercises pertaining to the opening of the great affair should be impressive, yet at the same time very simple. Among the most prominent guests who received invitations for the opening exercises were: The President of the United States, the Duke of Veragua, the lineal descendant of Columbus, the Vice-President, members of the Cabinet, the judges of the Supreme Court, the diplomatic corps, senators, members of the House of Representatives, the governors of the several States, the mayor and city government of Chicago, Chicago park commissioners, the members of the governing boards of the Exposition, and the members of the board of lady managers.

The programme is as follows:

1. Music—Columbian March and Hymn—John K. Paine.
2. Prayer.
3. Presentation of chiefs of departments and foreign commissioners by the Director-General.
4. Music—"In Praise of God"—Beethoven.
5. Address and opening of the World's Columbian Exposition by the President of the United States.
6. Starting of machinery, during which time will be performed "Hallelujah Chorus"—Handel.
7. Official visit from the President of the United States and the officials of the World's Columbian Exposition and the World's Columbian Commission to the various departments, arrangements having been made previously with each chief to receive them.

The formal opening exercises were arranged to take place in the Grand Plaza, on the east front of the Administration building. The invited guests of the occasion were seated on the platform, as well as the members of the grand chorus. It is estimated that 100,000 people may here witness the exercises without being overcrowded. After the opening programme has been carried out and President Cleveland has declared the Exposition opened, and pressed the electric button by which the machinery is put in operation, the guests were to be escorted through the buildings and grounds.

How to Reach the Grounds.—The accompanying official map of Jackson Park shows the arrangement of

the Exposition grounds and buildings, and the relation of the Midway Plaisance to it. The steamboats land their passengers at the great pier. The Illinois Central Railroad has built a station at 60th St., where all passengers by this route will be landed. All the other railroads land their passengers in the Great Railway Terminal station inside the grounds. The elevated railroad has built a station over the annex to the Transportation building, which is near the heart of the grounds. Most of the visitors reaching the grounds by the cable roads land at the north end of the grounds, near the 57th St. entrance. The more important entrances to the grounds are 57th St., 59th St., 60th St., 62d St., and 64th St.

The Midway Plaisance, as will be seen from the map, comprises a strip of land between 59th and 60th Sts., extending from Stoney Island Avenue to Cottage Grove Avenue. It is here that all concessions have been granted, with two or three exceptions, that are not necessary features of the Exposition. There are several entrances to the Midway Plaisance, and it is reached from the Exposition grounds by a large entrance opposite the Woman's building. A viaduct has been built by which Stoney Island and the other avenues crossing the Plaisance are elevated, so that visitors can pass back and forth without crossing any highways.

The Entrances.—Entrance tickets to the grounds are on sale at hotels, railway stations and in many other designated places throughout the city and also at an abundance of ticket offices at the entrances to the Exposition grounds. There are nearly two hundred ticket windows at the entrances to the grounds and 325 turnstiles. The several routes by which the grounds are reached from all parts of the city are so far perfected in their arrangements for carrying passengers that there is little doubt that they will be able to accommodate all who may attend.

The Japanese make one of the most complete and comprehensive exhibits of any foreign nation, being represented in all but two or three of the larger buildings, in addition to some special exhibits and concessions. Their displays in the Manufactures and Liberal Arts building include silks, pottery, porcelains, art work and other manufactures, while in the Agricultural building is a fine exhibit of tea and other products, and in the Horticultural building many plants, flowers and examples of Japanese gardening and floriculture. At the north end of the Wooded Island the Japanese government has erected a very attractive structure, which has just been dedicated with considerable ceremony, and which will be formally presented to the Chicago park commissioners at the close of the Exposition as a permanent memorial. The building is a fine specimen of Japanese handiwork and architecture. It is one story high and consists of three pavilions, each representing an important era in architecture and decoration in the history of Japan. The right wing represents an era corresponding to the period of the discoveries of Columbus. Other features of the Japanese exhibit will be the Japanese village, concession for which was granted on Midway Plaisance, and tea houses in the Exposition grounds proper. The Art Gallery, Fisheries building and other buildings also contain interesting exhibits from these people.

Side Shows and Concessions.—So many concessions have been granted by the World's Columbian Exposition that the impression has got abroad that the fifty cents admission fee to the grounds entitles the visitor to see only a part of the Exposition proper. This impression is erroneous, decidedly so. All the buildings, both those erected by the Exposition and those erected by the several States and foreign nations, are open to the public without cost, and all the exhibits in the Exposition are also open to the inspection of the public without additional cost. The fifty cents admission permits the visitor to see the whole Exposition and enjoy many comforts such as seats in the buildings and grounds, retiring rooms, drinking water, and the like. But there are many duplicates of these comforts, besides other extras, for which a small charge is made. Visitors will have an abundant supply, without cost, of all the conveniences necessary to their comfort; but if they are willing to pay for extras, they will secure a little more seclusion and perhaps somewhat more luxurious arrangements. There are always plenty of people who are willing to pay extra for special conveniences, and the Exposition proposes to take advantage of this tendency and benefit by it, so as to increase its legitimate income in every way possible. The estimated cost in round numbers is \$22,000,000 to open the Exposition to the public. In addition to this, there will be large running expenses during the six months it is open; so that in order to meet the outlay from entrance admission alone, there would be necessary an attendance of about 50,000,000 people. In order to make the Exposition a model as an exposition and also a success as a business venture, the management has availed itself of every possible source of revenue.

The many concessions must bring in returns to the amount of some millions of dollars. It need not be a necessary part of the programme of each visitor to pay a visit to the promenade on the roof of the Manu-
