

a monograph on the subject is timely and will meet with full appreciation. Levers, tackle, windlasses, hydraulic machinery, cranes and shears, excavators and dredges and pile drivers are samples of the subjects included in this work. German like, the author starts from the simplest types of machinery—levers and jacks—and goes up to the most complicated machinery in use by modern engineers. Formulae and the resolution of force are applied wherever needed to elucidate the action of the machinery. The illustrations are very well executed and leave nothing to be desired.

THE ART OF PRESERVING HEALTH. Outlines of practical hygiene adapted to American conditions. By C. Gilman Currier, M.D. 1893. New York: E. B. Treat. Pp. 468. Price \$1.75.

The contents of this work indicate a very full scope. Nothing appertaining to practical hygiene seems foreign to it. Ventilation, food, water, plumbing and sewage, diseases, bacteriology, infection and disinfection are among the topics which it treats. Each topic involves a branching out into allied subjects, so that nothing is left to be desired as regards range. The author's treatment of the subject seems judicious, as he does not seem to be carried away by any fads and his recommendations seem dictated by common sense. As an example of the details of the treatment, the arsenic found in some of the kindergarten papers and in certain bed ticking is spoken of, a detail indicating that the author has done his best to thoroughly and adequately cover his subject.

Beautiful Calendar.—Messrs. Styles & Cash, ornamental printers and stationers, corner of Fourteenth Street and Eighth Avenue, New York, issue every year very handsome calendars, which they present to their customers and friends on the first of January with their greetings. This year's issue does not lack the merit of their previous productions.

The "Columbia" desk calendar of the Pope Manufacturing Company is received. It is a pad calendar having space for memoranda for each day of the year, but a portion of each day's leaflet tells something of the advantages of bicycles, and especially of the well known Columbia wheel. The Columbia was among the very first in the field as a good wheel of American manufacture, and it has always held its place.

Any of the above books may be purchased through this office. Send for new book catalogue just published. MUNN & CO., 361 Broadway, New York.

SCIENTIFIC AMERICAN BUILDING EDITION.

JANUARY, 1894. (No. 99.)

TABLE OF CONTENTS.

1. Elegant plate in colors showing a suburban dwelling at Bridgeport, Conn., recently erected for L. D. Plumb, Esq., at a cost of \$4,500 complete. Floor plans and perspective elevation. An excellent design. Mr. C. T. Beardsley, architect, Bridgeport, Conn.
2. Plate in colors showing the residence of Thomas C. Wordin, Esq., at Bridgeport, Conn. Two perspective views and floor plans. Cost \$3,600 complete. Mr. Joseph W. Northrop, architect, Bridgeport, Conn.
3. A colonial dwelling erected for Philip Lucas, Esq., at Mount Vernon, N. Y. Perspective and floor plans. An excellent design. Cost \$7,000 complete. Mr. Louis H. Lucas, architect, Mount Vernon, N. Y.
4. A cottage at Cranford, N. J., erected at a cost of \$5,000. Floor plans, perspective view, etc.
5. Engravings and floor plans of a suburban residence erected at Brookline, Mass. Mr. E. L. Rodgers, architect, Boston, Mass. A very attractive design.
6. A dwelling recently erected at Elizabeth, N. J., at a cost of \$5,500. Floor plans and perspective elevation. Mr. J. E. Baker, architect, Newark, N. J.
7. A new frame schoolhouse at Elizabeth, N. J., erected at a cost of \$18,000 complete. Elevation and floor plans. Messrs. Charlock & Howard, Elizabeth, N. J., architects.
8. A dwelling recently erected for W. E. Clow, Esq., at Buena Park, Chicago, Ill. A picturesque design. Two perspective views and floor plans. Mr. Greg Vigeant, architect, Chicago.
9. A town library of moderate cost at Colchester, England. Perspective view and plans.
10. A house at Cambridge, Mass., erected at a cost of \$6,000. Mr. J. T. Kelly, Boston, architect. Perspective and floor plans.
11. Restoration of the Pantheon at Rome. Half page engraving.
12. Miscellaneous Contents: A rival to oak.—Seaside painting.—Miscellaneous weights.—Water tanks.—Improve your property.—Cement.—Peruvian ruins.—Ornamental iron and brass work, illustrated.—Facts for builders.—The Goetz box anchors, post caps, and hangers, illustrated.—Improved gasgrate, illustrated.—Improved drawing instruments, illustrated.—Climax gas machine, illustrated.—Improved square chisel, mortiser, and borer, illustrated.—Adamant brush finish.—Patent stair gauge, illustrated.

The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Forty large quarto pages, equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural Publication in the world. Sold by all newsdealers. MUNN & CO., PUBLISHERS, 361 Broadway, New York.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion: about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

The new material, "Linenoid," Westfield, Mass. "U. S." metal polish. Indianapolis. Samples free. Stave machinery. Trevor Mfg. Co., Lockport, N. Y. For mud dredging engines. J. S. Mundy, Newark, N. J. Improved iron planers. W. A. Wilson, Rochester, N. Y. Microbe Killer Water Filter, McConnell Filter Co., Buffalo, N. Y.

Pipe frame truck baskets, steel and wooden trucks, etc. L. M. Moore, Rochester, N. Y. See page 399.

Steam Hammers, Improved Hydraulic Jacks, and Tube Expanders. R. Dudgeon, 24 Columbia St., New York. Screw machines, milling machines, and drill presses. The Garvin Mach. Co., Light and Canal Sts., New York.

Centrifugal Pumps. Capacity, 100 to 40,000 gals. per minute. All sizes in stock. Irvin Van Wie, Syracuse, N. Y.

For Sale—Patent No. 434,673, for washing milk cans. No patent sharps need apply. B. R. Rapp, West Chester, Pa. Wanted—Light machinery or specialties to build. P. G. Fleming's Machine Works, Elizabeth, N. J.

Carborundum—hardest abrasive known. Send for prices of wheels, powder, etc. The Carborundum Co., Monongahela, Pa.

Guild & Garrison, Brooklyn, N. Y., manufacture steam pumps, vacuum pumps, vacuum apparatus, air pumps, acid blowers, filter press pumps, etc.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4; Munn & Co., publishers, 361 Broadway, N. Y. For the original Bogardus Universal Eccentric Mill, Foot and Power Presses, Drills, Shears, etc., address J. S. & G. F. Simpson, 26 to 36 Rodney St., Brooklyn, N. Y.

Patent Electric Vise. What is claimed, is timesaving. No turning of handle to bring jaws to the work, simply one sliding movement. Capital Mach. Tool Co., Auburn, N. Y.

Competent persons who desire agencies for a new popular book, of ready sale, with handsome profit, may apply to Munn & Co., Scientific American office, 361 Broadway, New York.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question. **Inquiries** not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each. **Books** referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(5699) H. C. writes: I have a two cell electroplating battery. When I want to plate a wax matrix I am unable, after brushing same with black lead, to make it a conductor. I wish to electrotype on a small scale and would like to have these questions answered: 1. The batteries are common telegraph (zinc, copper and blue vitriol). Will such batteries (two in number) furnish a current sufficient? How can I increase the current? How can I make a wax matrix a conductor? A. After the black lead has been applied sprinkle iron dust on your wax. This will start the plating. Your batteries cannot have their current increased beyond a certain point, determined by their internal resistance. In parallel $\frac{1}{2}$ ampere is about all they will give and in series about $\frac{1}{4}$ ampere. They will give current enough for small work. 2. About what proportion of sulphuric acid should plating vat contain? A. About 5 per cent by weight. Consult our SUPPLEMENT, No. 310, for particulars as to electroplating.

(5700) J. F. writes: 1. I have a magnet machine that was used on a telephone circuit. Will you please tell me whether I can use it to run a small model of an electric motor? A. Not if of the ordinary alternating current type. 2. I have an electric motor of 1-16 horse power. Can you please tell me what power will be required to run it and get the full power out of it? A. 1-16 horse power or a little more. The volts required should be marked on the machine.

(5701) A. W. writes: 1. In SCIENTIFIC AMERICAN of October 28, Notes and Queries, No. 5442, you say a 14 inch wheel, 96 pitch, but do not mention number of blades; please do so, as I do not know the kind of wheel to get until then? A. Use a three-bladed screw. 2. I am making an Edison pattern dynamo of following dimensions: Fields $2\frac{1}{2}$ inches long by 1.3-16 diameter, with twelve layers of No. 24 wire on each, 12 ounces on both; field pieces are 3 inches long, bored for 1 $\frac{1}{2}$ armature diameter. What number of wire, number layers, number convolutions, and 12 commutator bars is proper for the armature? A. Your armature should have 90 ohms resistance. This would be given by No. 30 wire wound in three layers, giving about 1,300 convolutions. The dynamo would have a capacity of 0.4 ampere. This is for series winding.

(5702) W. R. L. asks: In microphone transmitters there seems to be a great diversity of opinion as to the why. Some say it is the variable pressure, others the movable contact, or the heat generated, etc. What is the most probable theory? Some use large contact surfaces, while others use mere points. Which is the

best, or are they both best according to the manner of use? A. Variations in resistance, due to more or less contact between the surfaces, is the "why" of it. This greater or less contact may be brought about by greater or less pressure or greater or less areas of contact. Absolute separation produces jarring sounds. Your last surmise is about correct, though larger surfaces are now preferred.

(5703) G. F. H. writes: 1. What is the reason that in an incandescent electric lamp of 50 volts you unscrew the globe and touch the standard of two of them, the shock does not feel as strong as in a common 2 volt cell battery? Sometimes the current cannot be felt at all in the incandescent lamp. A. If you touch the similar poles or terminals, there will be little shock unless a ground exists. If opposite poles, the shock may be severe, and in case of an alternating current system, any touch may be fatal. The standard proper is insulated from the wire and should give no shock. 2. Why is it that by wetting your fingers you can get more of a shock than by using dry fingers? A. It improves the electrical contact. We strongly advise you not to touch any terminal, as it may produce instant death.

(5704) V. G. A. asks what Chatterton's compound is. A. Chatterton's compound is made of—Stockholm tar..... 1 part. Resin..... 1 part. Gutta percha..... 3 parts.

Address any dealer in electrical supplies if you wish to buy it.

(5705) F. J. T. asks: 1. What is the depolarizer used in bichromate batteries? A. The chromic acid of the alkaline bichromate. 2. How can I find tables for winding motors, etc., to get fractional parts of, and horse power? Also resistances, so as to wind electro-magnets, etc.? I have "Experimental Science," but cannot find what I want. A. These have to be calculated. Examples of dynamo and magnet calculations are contained in Sloane's "Arithmetic of Electricity," \$1 by mail. 3. How can I find how to make a small gasoline engine? A. We can only refer you to books, but it is doubtful if you can build one from books alone. We recommend and can supply you with the following books relating especially to the subject you refer to: Robinson's "Treatise on Gas and Petroleum Engines," price \$5.50; also Clerk's "Treatise on the Gas Engine," price \$2 mailed.

(5706) S. S. D. says: Will you please tell me how to make a good composition for printers' rollers?

A. Best glue..... 10 $\frac{1}{2}$ lb. Black molasses or honey..... 2 $\frac{1}{2}$ gal. India rubber, dissolved in oil of turpentine..... 1 lb. Venice turpentine..... 2 oz. Glycerine..... 12 oz. Vinegar..... 4 oz.

The above formula is given for the mysterious black composition, so durable and elastic, and known but to very few persons until recently. Purified India rubber only is used. To recast add 20 per cent new material. The common receipt for printers rollers is 2 pounds best glue, soaked over night, to 1 gallon New Orleans molasses. Will not recast.

(5707) G. F. T. asks (1) how to make a good solder for mending tinware, one that does not require acid to solder with if possible. One that will solder sheet iron. A. An alloy made of 4 parts tin, 2 parts lead, 1 part bismuth, makes an easy-running solder for soldering with an alcohol lamp. Tinned articles can be soldered without acid, but untinned articles as sheet iron must be made clean and tinned with acid. 2. Can you tell me how to make ordinary glass vials untransparent entirely? A fluid to wash them in I would like to know of. A. The fluid hydrofluoric acid is used for making gas translucent, the fumes answering the same purpose; it is a most dangerous poison and is not recommended for use by amateurs. Coarse emery shaken in the bottle with buckshot, or the outside of the bottle inclosed in a box with emery and shot and well shaken, will produce the desired effect.

(5708) L. S. F. asks: Practically, how close to the wind can a first class yacht sail? That is, what is the minimum angle between the yacht's path and the direction of the wind, allowance being made for leeway? A. Much depends upon the model and trim of sails, in the ability of yachts to sail close to the eye of the wind. Fine lines and flat sheets may carry a yacht up to two points of the wind, say 22 degrees off, but a large class cannot sail nearer than 3 points or 33 degrees.

(5709) L. E. R. asks: 1. Is there any known substance that will dissolve carbide of silver? A. If such a compound were produced, it would probably dissolve with decomposition in nitric acid. 2. How may one change a formula written in parts, where liquids as well as solids are in parts, to apothecaries' fluid measure, also dry? A. Parts generally mean parts by weight. Substitute in the solid parts grains or other units, and for the liquids equivalents in liquid measure, having regard to the specific gravity of the fluids. Tables of equivalents are given in the text books.

(5710) G. L. R. asks: Please answer in your Notes and Queries (1) how the compass is kept from being attracted by the mass of steel around on the man-of-war? A. Special constructions of compass are made, shielded from the influence of the ship. 2. I have 6 cells of the Daniell's battery, copper on the outside of the porous cup in blue vitriol and water, and zinc on the inside of the porous cup in salt and water; please tell me what the copper color substance is that forms on the outside of the porous cup and how I can remove it without taking pieces out of the cup when I try to remove the substance. A. It is metallic copper. You can remove it by dissolving in nitric acid. It may be cheaper to get a new cup.

(5711) M. S. P. asks: How many cells of storage battery are required to run the electric motor described in SUPPLEMENT, No. 641, also the number and size of the plates in each cell of storage battery? The number of cells of gravity battery required to charge the storage battery and the time required to charge the same? A. Two cells, each having one square foot of positive plate. To charge slowly, 5 gravity cells will answer. By using parallel series of 5 gravity cells the charging can

be accelerated. We advise not less than 20 gravity cells in 4 series of 5 each.

(5712) H. O. G. asks: What will clean a boiler of lime where you carry 15 pounds of steam to heat a building without injuring the boiler? A. Charge the boiler through the feed with a half pound of caustic soda for each nominal horse power, through the feed or in any convenient way. Use the boiler a week and then clean out thoroughly. If there is means for blowing off the boiler, a less quantity used at stated intervals, and the water partially blown out, will keep the boiler in good condition.

(5713) N. A. W. asks: It is quite generally known that carbonic acid gas is deathly poisonous, and we are also told that carbonic acid gas gives the palatable, sparkling, and exhilarating taste to champagne, beer, etc. If one is poisonous and the other healthful, why should the two gases have the same name? A. Carbonic acid gas if inhaled tends to asphyxiate or drown by exclusion of air. It is possible that it also has a poisonous effect when drawn into the lungs. In drinking champagne very little or none of the gas gets to the lungs, and its presence in the wine does not interfere with respiration. A lung poison is not necessarily a stomach poison. The gas is the same—there are not two gases of the same name.

TO INVENTORS.

An experience of forty-four years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices which are low in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

January 9, 1894,

AND EACH BEARING THAT DATE.

(See note at end of list about copies of these patents.)

Address labels, machine for attaching, A. Heim.....	512,295
Asphalt, refining, P. D. Upson.....	512,434
Asphalt, refining, W. S. Wilkinson.....	512,348
Auger handle, D. W. Meacham.....	512,384
Auger, post hole, A. De Witt.....	512,540
Automatic lubricator, Slater & Barrett.....	512,402
Awning, C. A. Schöneck.....	512,490
Axle cutting machine, C. H. Woodall.....	512,426
Bale tie machine, W. A. Laidlaw.....	512,617
Baling press, J. Heaton.....	512,294
Ball, see Billiard ball.....	
Balloons, parachute sail for, T. Schneider-Preiswerk.....	512,450
Bandage, F. W. Fulford.....	512,324
Bar, see Car draw bar.....	
Basket, shipping, Springer & Eviston.....	512,404

TRADE MARKS.	
Axes, hatchets, chisels, plane blades, bits, gouges, and other tools, H. W. Peabody & Company.....	24,031
Baking powder, America Baking Powder Company.....	24,005
Beverages, certain-named non-alcoholic, W. Healy & Bates.....	24,019
Cigars, J. Martinez.....	24,020
Collars and cuffs, waterproof, Celluloid Company.....	24,034
Disinfectants, Miller Brothers.....	24,011
Edge tools, Collins Company.....	24,030
Electro-magnet appliances, A. Harding.....	24,027
Flores lined fabrics, Bosch Manufacturing Company.....	24,035
Flour, wheat, J. C. Daniels & Company.....	24,000
Flour, wheat, La Grange Mills.....	24,001
Gas tubes, Gilliard, P. Monne & Cartier.....	24,029
Grease and machine oils, axle, Searle & Son.....	24,010
Mattresses, air, Metropolitan Air Goods Company.....	24,033
Medical compounds, certain named, S. Morris.....	24,017
Oil, cod liver, C. C. Kraeuer Company.....	24,014
Oils for chronic, malignant, and lung diseases, preparation of, Drs. Reynolds & Reynolds.....	24,015
Oysters, raw and processed, J. H. Collison.....	24,008
Paper bags, Columbia Paper Bag Company.....	24,032
Remedies for malarial diseases, Paris Medicine Company.....	24,016
Remedies for rheumatism and similar complaints, J. Ley.....	24,012
Remedies for throat diseases, A. Strehler & Company.....	24,013
Salt, Crystalline Salt Company.....	24,006
Soap, toilet, Jarmuth Brothers.....	24,009
Stoves, oil, gas, or vapor, Cleveland Foundry Company.....	24,028
Tobacco, smoking and chewing, L. Bremer's Sons.....	24,025
Tonic, C. F. J. P. De Kangle.....	24,018
Underwear, muslin, knit, and woven, Conradi & Friedemann.....	24,026
Whisky, D. V. B. Henarie.....	24,021
Whisky, E. Martin & Company.....	24,022
Whisky, I. Sommers.....	24,023

DESIGNS.	
Cabinet, H. T. Van Denbergh.....	23,002, 23,003
Wall paper, F. Aumonier.....	23,004, 23,005

A printed copy of the specification and drawing of any patent in the foregoing list, or any patent in print issued since 1883, will be furnished from this office for 25 cents. In ordering please state the name and number of the patent desired, and remit to Munn & Co., 361 Broadway New York.

Canadian patents may now be obtained by the inventors for any of the inventions named in the foregoing list, provided they are simple, at a cost of \$40 each. If complicated the cost will be a little more. For full instructions address Munn & Co., 361 Broadway, New York. Other foreign patents may also be obtained.

ORDINARY RATES.

Inside Page, each insertion - - 75 cents a line
Back Page, each insertion - - - \$1.00 a line

For some classes of Advertisements, Special and Higher rates are required.

The above are charges per agate line—about eight words per line. This notice shows the width of the line, and is set in agate type. Engravings may head advertisements at the same rate per agate line, by measurement, as the letter press. Advertisements must be received at Publication Office as early as Thursday morning to appear in following week's issue.
