tents. The can may be conveniently filled, and the device is of simple construction and not liable to get out of

VENDING MACHINE.—James Walton, Phoenicia, N. Y. This is a machine for vending either stamps or paper and envelopes, but it is preferably ar ranged with duplicate parte, so that both may be delivered by one machine. It is designed to be simple and inexpensive, and with easily working mechanism, which is not liable to get out of order, the delivery of the postage stamps and paper and envelopes being effected by mechanism controlled by dropping a coin in the slot of

STREET SWEEPER.—August G. Rosenbauer and Richard Brussel, New York City. This sweeper is designed to afford means of sweeping the en. tire breadth of the roadway, elevating the sweepings as the machine moves along and depositing them in a dirt receptacle, which can be conveniently dumped at any desired point. The movements of the brushes are controlled from the driver's seat in such manner that the brushes may have a light contact with the roadway, or may be made to bear heavily thereon, or lifted entirely clear and their motion stopped.

DESIGN FOR TRIMMING. - Josephine Muller, New York City. The principal feature of the inventiou consists of serpentine opposing side lines, forming a series of curved loops appearing independently formed, one merging into the other, imparting to the trimming a plaited appearance. In the details of the design a central ornament is formed between the marginal lines, having an embossed appearance, and cross ties appear to separate the series of loops.

Note.-Copies of any of the above patents will be furnished by Munn & Co., for 25 cents each. Please se d name of the patentee, title of invention, and date

SCIENTIFIC AMERICAN

BUILDING EDITION

NOVEMBER, 1894.-(No. 109.)

TABLE OF CONTENTS.

- 1. Elegant plate in colors showing a cottage at Bro x ville, N. Y., recently erected for B. L. Clark, Esq. Two perspective elevations and floor plans. Estimated cost \$5,000. Mr. William A. Lambert, architect, New York City. A modern and pleasing de-
- 2. Plate in colors showing the residence of John Cottier, Esq., at Bensonhurst, L. I. Three perspective elevations and floor plans. Cost \$6,750 complete. A good example of Colonial architecture. Messrs. Partitt Bros., architects, Brooklyn, N. Y.
- 3. A dwelling at Edison Park, Ill. Cost \$1,700. Architect, Mr. F. W. Langworthy, Chicago, Ill. A model design for its class and cost. Two perspective elevations and floor plans.
- 4. A very attractive residence recently erected for A. C. Garsia, Esq., at Flatbush, L. I. Two perspective elevations and floor plans. Mr. John E. Baker, architect, Newark, N. J. A modern design.
- 5. Au \$800 summer cottage built for A. R. Doten, Esq., at Casco Bay, near Portland, Me. Perspective elevation and floor plans. Mr. Antoine Dorticos, architect, Portland, Me
- Esq., at Bensonhurst, L. I. A very picturesque architect, New York.
- 7. A church at Short Hills, N. J., built entirely of rubble stone. Estimated cost \$6,000. Perspective architects, New York City
- 8. The house of Francis I. at Abbeville, France.
- 9. A stable and conservatory attached to the residence of John Cottier, Esq., at Bensonhurst, L. I. Perspective elevation and ground plan. Messrs. Parfitt Bros., architects, Brooklyn, N. Y.
- 10. A residence at Ardmore, Pa., in the Queen Anne style. Perspective elevation and floor plans. Cost complete \$6,750. Architects and builders, Messrs. J. B. Cornell & Sons, Philadelphia, Pa.
- 11. A cottage at Edgewater, Ill., erected for Edgar Smith, Esq. A unique design in the Colonial style. Cost \$7,500 complete. Two perspective elevations and floor plans. Mr. G. W. Maher, architect, Chicago,
- Emmett, architect, Bath Beach, Long Island.
- trated.-Party walls.-Architectural metal ornaments, illustrated.

cally, a large and splendid MAGAZINE OF ARCHITECwith fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural Publication in the world. Sold by MUNN & CO., PUBLISHERS,

361 Broadway, New York.

Business and Personal.

The charge for Insertion under this head is One Dollar a line for each insertion : about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue

"C.S." metal polish. Indianapolis. Samples free Ill. catalog tools, 15c. Frasse, 19 Warren St., N. Y.

Spanish taught by mail by W. G. Chaffee, Oswego, N. Y. Best Handle Mach'y. Trevor Mfg. Co., Lockport, N.Y. Our loose pulley oiler will save you money. Kridler

Manufacturing Company, Grand Rapids, Mich. Screw machines, milling machines, and drill presses The Garvin Mach. Co., Laight and Canal Sts., New York.

Telephones: How to Fit Them up and Use Them. Hughes. Illustrated. Cloth, \$1.00. Spon & Chamberlain, 12 Cortlandt St, New York.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail. \$4; Munn & Co., publishers, 361 Broadway, N. Y.

Sleigh knee patent, No. 527319, for sale at a small royalty to manufacturers, or by State rights. Address Lewis L. Chaffin, Monticello, Minn. See description on page 346.

Competent persons who desire agencies for a new popular book, of ready sale, with handsome profit, may apply to Munn & Co., Scientific American office. 361 Broadway, New York.

Send for new a d complete catalogue of Scientific and other Books for sale by Mu n & Co., 361 Broadway, New York. Free on application.

HINTS TO CORRESPONDENTS

Names and Address must accompany all letters, or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresse of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be

personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(6305) J. J. H. asks: 1. How high above the level of its source will an ordinary hydraulic ram raise water? A. The ordinary water rams will force water to 100 feet, and in small quantity under favorable conditions to 200 feet, if the distance is not excessive. See the possibilities and computed conditions for hydraulic rams in Scientific American Supplement, No. 793, 10 cents mailed. 2. Will a sheet of zinc burned in a stove loosen soot in a chimney? A. The burning of 6. Perspective elevations and floor plans of a handsome zincis said to loosen soot in the chimney. We appre. | charge the batteries? A. Four cells of storage battery residence recently completed for George W. Catt, hend the cause to be in the deposit of zinc oxide on the surface, which prevents the soot from sticking. The design. Cost \$8,100 complete. Mr. S. S. Covert, burning of zinc should be done after a chimnev has been cleaned. 3. Does the temperature of steam increase with the pressure? A. The temperature of steam increases with the pressure. 4. What is taggers iron? elevation and floor plan. Messrs. Lamb & Rich, A. The brand of iron from which tin plate is rolled.

> (6306) H. E. J. B. asks: 1. How is white or cream sealing wax made and what can I use in place of bleached shellac for making bronze or gold sealing wax? How is the wax poured in small strips about 1/4 inch in diameter? A. A beautiful variety (aventurin), which can be prepared at comparatively low cost, is obtained by stirring finely powdered mica into the melted ground mass. Gold and silver waxes are obtained by mixing finely powdered leaf metal with the melted ground mass. Ground mass for translucent wax is:

Bleached shellac	3]	parts.
Viscid turpentine	3	"
Mastic.	6	**
Chalk	2	**

12. An attractive cottage at Bath Beach, Long Island, | For white sealing wax add zinc white. Bleached shellad N. Y., recently erected for G. W. Snook, Eq. Two must be used. For information in regard to moulding sealperspective elevations and floor plans. Mr. Percey ing wax we refer you to Brannt's "Varnishes, Lacquers, Printing Inks and Sealing Waxes," \$2.50. 2. How can 13. Miscellaneous contents.-Wood pavementin London. I make gold plating to rub on, also silver plating to rub -Preservation of wood.-Methods of constructing on places that is buffed off too much? A. Gilding.-Artichimney flues and pipes at Paris, illustrated.—The cles of steel, copper, silver, and some other of the baser sing of red brick.—Long distance house mov- metals may be gilded by simply immersing them in a ing.—Carved and fancy mouldings, illustrated. -A weak solution of the chloride of gold. Silvering.—Disnew sash lock.—Automatic heat regulation in solve 1 ounce crystals of silver nitrate in 12 ounces soft houses, etc., illustrated.—Woodwork vs. flame.— water, then dissolve in the water 2 ounces potassium cy-Curiosities about wood.—Cement water tanks.— anide. Shake the whole together and let it stand until it An improved hot water heater, illustrated.—How becomes clear. Have ready some half ounce vials and to cool a cellar -A new woodworking machine, fill them half full of Paris white or fine whiting and then illustrated. - An improved stage bracket iron, illus fillup the bottles with the liquid and it is ready for use. The silver coating is not as tenacious to the article as when electrolytically deposited. This is very poisonous The Scientific American Architects and Builders and should be handled with great caution—if at all. 3. Edition is issued monthly. \$2.50 a year. Single copies. In making gold chloride from coin after dissolving in 25 cents. Forty large quarto pages, equal to about | nitro-muriatic acid and precipitate with ammonia, will two hundred ordinary book pages; formi g, practi- any copper be thrown down with the gold if there had been any in the gold coin or will it remain in the acid? TUBE richly adorned with elegant plates in colors and A. Precipitate the copper first by adding sodium bicarhonate until effervescence ceases. The copper will be deposited as a green carbonate of copper. Filter, and add enough nitric acid to turn blue litmus paper red. 4. I have "Experimental Science" and would like to know if I made a dynamo one-quarter size of the hand nower dynamo on page 488, would I get a sufficient power to ring an ordinary 21/4 inch bell, such as is used with a battery? A. Yes. 5. What will dissolve bichromate of potash and

gelatin off glass that has been exposed to sunlight? A.

Try weak hydrofluoric acid. 6. How can I put the finishing polish on an opal? A. Use fine emery applied to a Brick drier car. A. T. Bemis:

lead lap, finish with rottenstone and water for the sun and screper for glassical lab. lead lap, finish with rottenstone and water. 7. How can iron or steel be blued without heat? A. Solution of potassium ferricyanide and water, one part of the potas sium salt in two hundred of water; solution of ferric chloride same proportion. Mix the two solutions and

(6307) M. W. asks: Why is it that dirt taken from an excavation will not fill it when replaced? A. The dirt and sand of all original soils, except winddriven sand, is solidly packed, having been deposited slowly in water in the early geological ages, by which action the particles were floated into contact, thus occupying the smallest possible volume. When such earth is disturbed the contact is broken, a thin film of air sepa-Centrifugal Pumps for paper and pulp mills. Irrigating rates the particles and keeps them from falling into the and sand pumping plants. Irvin Van Wie, Syracuse, N. Y. closest relation. This is proved by pouring and ramming dry sand into a keg and then pouring in water to satura tion; then by shaking the keg the sand will settle into close contact, showing the difference in volume.

> (6308) J. E. H. asks: 1. What is the best kind of glass to be used in making Wimshurst machine? A. Thincrystalplate. 2. What size wire shall I use to wind sewing machine motor for 110 volts? A. For motor described in Supplement, No. 641, use No. 3 wire on field and No. 28 on armature. Start it with a resistance in series or you will burn out the armature. 3. A good method to cut the tops off two quart bottles. I would like to make battery jars out of them. A. Notch the glass with a file; rub it back and forth with a red hot e stem or poker. When a crack starts, lead it around with the hot poker or pipe stem. It is well to tie a string around the bottle as a guide. Rub off the sharp edges with a whetstone such as used for scythes

(6309) N. B. P. asks for browning for shotgun barrels. Also how is the best way to remove what is left of the old browning? A. Wet a piece of rag with chloride of antimony, dip it into olive oil, and rub the barrel over. In 48 hours it will be covered with a fine coat of rust Then rub the barrel with a fine steel scratch brush, and wipe with a rag dipped in boiled linseed oil. Remove the old coating with oil and emery paper, then remove the grease with caustic potash and treat as above

(6310) O. S. asks for the relation of the armature wire resistance to the field winding of a series and a shunt dynamo. A. In a series dynamo the resistance of the field maguets should be two-thirds that of the armature; in a shunt-wound dynamo the product of armature and field resistance should be equal to the square of the external resistance. The armature resistance is equal to one-quarter the resistance of the length of wire used in winding it, unless of course the wire is used in

(6311) W. D. asks: If a bar of wrought iron 1 inch in diameter and 1 foot long, carrying a coil of insulated wire and moving at a speed of 20 feet per second past a permanent magnet distant 1 foot, this magnet having a cross section of 3 inches and a space between its poles of 1 foot, is it possible by varying the quantity of wire to induce a current having a value of 1 watt? A A current is not measured in watts, but in amperes. It would be very difficult to produce a one ampere current with one volt potential difference in the circuit under the conditions named.

(6312) H. C. W. asks how many storage cells it would take to run the motor 641 to the best advantage, and can the motor be used as a dynamo to will run the motor. It is not adapted for use as a dy

TO INVENTORS.

An experience of nearly fifty years, and the preparation of more than one hundred thousand applications for pa tents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequaled facilities for procuring patents everywhere. synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broad way, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

November 20, 1894.

AND EACH BEARING THAT DATE
