

pare favorably with those of the American annuals. In the introduction the editor has summarized the progress of the year in saying: "If the year just closing has not been remarkable for the introduction of any new photographic process of cardinal importance, steady progress and improvement in most branches has still to be recorded."

PUBLICATIONS OF THE LICK OBSERVATORY OF THE UNIVERSITY OF CALIFORNIA. Vol. III. 1894. Sacramento: State Office. 1894. Pp. 229.

This report contains not only the purely astronomical work, but also papers treating of apparatus and materials. It will be a sine qua non in every astronomical library but it is also of interest to all cultured readers. The moon supplies a great part of the text, and a most superb series of plates from negatives taken at the observatory illustrate the contour of the lunar surface.

THE REPAIR AND MAINTENANCE OF MACHINERY. By Thomas Walter Barber. With about 400 illustrations. London: E. & F. N. Spon. New York: Spon & Chamberlain. 1895. Pp. x, 466. Price \$3.50.

This practical work seems to really cover, to a certain extent, a new field, relating as it does to the repairing of broken parts of machines. The book is excellently printed and contains a very full text, and it is impossible to believe that it does not fill a most excellent field, and it will doubtless be very acceptable to the practical machinist in this country. It is elaborately illustrated and contains a good index.

THE MECHANISM OF WEAVING. By T. W. Fox. London and New York: Macmillan & Co. 1894. Pp. xx, 472. Price \$2.50.

This work naturally does not lend itself to review. It is enough to say that it appears to embody an elaborate treatment of the subject, with numerous illustrations and full and satisfactory index. In its make-up it is worthy of all commendation; the illustrations are particularly clear and the type and paper most attractive, while as a sample of ornamental and suggestive binding it is especially to be noticed.

SCIENTIFIC AMERICAN BUILDING EDITION. JANUARY, 1895.—(No. 111.)

TABLE OF CONTENTS.

- 1. An elegant plate in colors, showing a Colonial cottage at Williamsbridge, N. Y., recently erected for Chas. H. Love, Esq. Two perspective elevations and floor plans. Cost complete \$4,250. Mr. Arthur C. Longyear, architect, New York City. A pleasing design.
2. A Colonial residence at New Rochelle, N. Y., recently erected for J. O. Noakes, Esq., at Iselin's Park. Two perspective elevations and floor plans. Cost \$5,000 complete. Mr. Manly N. Cutter, architect, New York City. An attractive design.
3. Colonial residence at Montclair, N. J., recently erected for Sylvester Post, Esq. Two perspective elevations and floor plans. Messrs. W. S. Knowles & A. H. Thorp, architects, New York City. A pleasing design.
4. A seaside cottage recently erected for C. H. Manning, Esq., at Kennebunkport, Me. Two perspective elevations and floor plans. A picturesque and unique design after the "New England" lean-to roof order. Mr. H. P. Clark, architect, Boston, Mass.
5. A residence at East Orange, N. J., erected at a cost of \$7,000. Architect Mr. W. F. Bower, Newark, N. J. Perspective elevation and floor plans.
6. The First Presbyterian Church at Stamford, Conn. Two perspective elevations and ground plan. A design of great architectural beauty, treated in the Romanesque style. Mr. J. C. Cady, architect, New York.
7. A residence at Scranton, Pa., erected for E. B. Sturges, Esq., at a cost of \$5,000 complete. Architect Mr. E. G. W. Dietrich, New York City. Perspective elevation and floor plans.
8. A summer residence at Cushing's Island, Me., recently erected at a cost of \$3,100 complete. Two perspective elevations and floor plans, also an interior view. Mr. John C. Stevens, architect, Portland, Me. An excellent example for a summer home.
9. View of the Armory of the Seventy-first Regiment, New York City. Architect Mr. J. R. Thomas, New York City.
10. Perspective view and floor plans of the fourteen story Reliance Building, Chicago.
11. Miscellaneous contents.—Buff brick popular.—Ceiling and cornice tinting.—Home ground arrangement of plants, illustrated.—Stone dressing by compressed air, illustrated.—Brick dust mortar.—Interesting ruin of cliff dwellers.—Removing the front wall of a warehouse, with sketches.—Improved woodworking machine, illustrated.—Buff brick in New York.—Ceiling paper.—"Decore-o," a new material for decorative purposes, illustrated.—Improved gutter hangers, illustrated.—Draughtsman's supplies, illustrated.

The Scientific American Architects and Builders Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Forty large quarto pages, equal to about two hundred ordinary book pages; forming, practically, a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates in colors and with fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects.

The Fullness, Richness, Cheapness, and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural Publication in the world. Sold by all newsdealers. MUNN & CO., PUBLISHERS, 361 Broadway, New York.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion: about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

"U. S." metal polish. Indianapolis. Samples free. Presses & Dies. Ferracute Mach. Co., Bridgeton, N. J. For stone quarry engines. J. S. Mundy, Newark, N. J. Smith's Leather Pattern Filler, Akron, O. Sample free. Screw machines, milling machines, and drill presses. The Garvin Mach. Co., Laight and Canal Sts., New York. Centrifugal Pumps. Capacity, 100 to 40,000 gals. per minute. All sizes in stock. Irvin Van Wyk, Syracuse, N. Y. Experienced competent agent solicits correspondence. Write him. G. W. S., Room 130, 27 Pine Street, N. Y. Emerson, Smith & Co., Ltd., Beaver Falls, Pa., will send Sawyer's Hand Book on Circulars and Band Saws free to any address.

Patents of merit purchased or placed upon the market. Address with full particulars, Chas. Babson, 24 Congress Street, Boston, Mass.

Guild & Garrison, Brooklyn, N. Y., manufacture steam pumps, vacuum pumps, vacuum apparatus, air pumps, acid blowers, filter press pumps, etc.

For the original Bogardus Universal Eccentric Mill, Foot and Power Presses, Drills, Shears, etc., address J. S. & G. F. Simpson, 26 to 36 Rodney St., Brooklyn, N. Y.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail. \$4; Munn & Co., publishers, 361 Broadway, N. Y.

Woven wire brushes.—The Belknap Motor Co., of Portland, Me. are the patentees and manufacturers of the best woven wire commutator brush on the market.

Competent persons who desire agencies for a new popular book, of ready sale, with handsome profit, may apply to Munn & Co., Scientific American office, 361 Broadway, New York.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and addresses must accompany all letters, or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(6349) S. W. asks: 1. Having given 6 inches as length of coil and 1/4 inch as diameter of iron core, how many ampere turns are required to magnetize the said core to saturation, and how great (approximately) would be the lifting power of the electro magnet so formed? A. Owing to leakage and to the fact that there is no real saturation point, no exact answer can be given. A very large number of ampere turns can be given with increase of the magnetic power on account of the long air path. 2. If I place two electro magnets end to end with poles near together, is the combined attractive power increased, i. e., will the magnets each pull more than they would acting separately on armatures? A. The combined power will be the same if similar poles face the same way.

(6350) T. H. B. writes: 1. Are all points of the earth's surface at the same potential (electrically)? I have heard it said that, owing to presence of certain minerals, metals, or acids in certain combinations, the potential might be higher at one place than at another, and that, owing to this difference of potential, a current might flow in a telegraph wire joining these two places, sufficiently strong to operate instruments in circuit, even when all batteries were removed from the wire. (The line of course being grounded at the terminals.) I have heard that this experiment has been successfully tried on certain lines removed from any sources of induction. Is the current present in the wire due to conditions stated, or is it due to other sources, and is not such a current, if it exist, properly called an earth current? A. Earth currents so called act as described. Their cause is obscure, but they are due to chemical changes. Telegraphic messages have been transmitted by them. 2. What becomes of the energy of a coiled spring when dissolved (under tension) in acid? I have seen the answer to this question in an earlier copy of the SCIENTIFIC AMERICAN, but cannot recall it. A. The so-called energy is simply the capacity to convert heat into mechanical energy. If a spring does work, its temperature falls. By solution in an acid this capacity is destroyed; there is no destruction of energy.

(6351) H. C. R. writes: 1. Do you consider a plastered ceiling safe that has been saturated with water during a cyclone; and then again soaked before the roof could be repaired? A. No; not safe. 2. Would not the vibrations of a power l church organ tend to bring down such a ceiling? A. Yes. 3. Can such a ceiling be thoroughly examined by simply inspecting the keys from above? A. No. 4. Is it not possible for the keys to appear all right, while the plastering has given way below? A. Yes.

(6352) R. W. K. asks: In designing a generator, is it necessary that there should be from five to seven times the weight of iron in the field as in the armature? Is it necessary that the spaces between the pole pieces should be five times the air gap? A. The factors given merely represent good general practice; there is nothing absolute about them.

(6353) A. T. asks if following dimensions and windings of dynamo will generate 30 amperes with a potential of 52 volts at the brushes: Length of wrought iron field magnets 3 1/2 inches by 5 inches diameter, wound with 25 pounds of No. 18 double cotton covered wire, 10 layers, 140 turns on each leg of magnet. Armature 4 1/2 inches diameter, 6 inches long, best laminated iron core, wound with No. 12 double cotton covered wire, 32 coils, 4 convolutions in each coil, speed about 1,800 revolutions per minute, general shape of dynamo about same as 60 light dynamo in SUPPLEMENT, No. 865. A. If you succeed in getting the above results, you will do well. If shunt wound, the product of your armature and field resistance should equal the square of the external resistance, or say three ohms.

(6354) J. P. G. asks: In making a Gramme size 3/4 inch diameter armature of 12 sections, is it absolutely necessary to wind each section in even layers and convolutions if wires on each section are of equal length? A. To secure a uniform current there should be an equal number of turns of wire in each section; the length is not necessarily identical.

(6355) A. B. says: I take the liberty to offer a suggestion to your answer to F. G. C.'s query, No. 6329, in SCIENTIFIC AMERICAN of December 22, for telling the points of the compass by the aid of the sun and a watch. If the hour hand of the watch be pointed at the sun—the watch lying flat—half way between the hour hand and twelve on the dial will be south. After south is located the other points are easily determined. Doubtless a compass would be more correct, but the method given will be found correct enough for ordinary requirements.

(6356) S. R. H. writes: I have a few questions that I would be glad to have answered in SCIENTIFIC AMERICAN. How far could a person live below the surface of the earth, say for instance 1, 2, or 3 miles deep? Would the air become too dense or compact for them? Is it not a fact that the earth's surface acts as a medium line for the center of gravity, atmospheric and water pressure? How far above the earth's surface is the air considered to be pure and healthy, to contain no poison matter? A. The depth at which a person can live below the surface of the earth depends upon the condition of temperature and the constitutional ability of the person to bear heat. The internal heat of the earth increases 1° Fah. for every 50 to 70 feet of vertical depth in various regions, so that from 2,000 to 3,000 feet in depth is about the limit that a man can work. In parts of the earth which have been subject to volcanic action, as in some of the mining districts, the temperature rises somewhat more than 1° in 50 feet, and 120° is the temperature at about 1,500 feet in depth. At this temperature labor is very difficult and forced ventilation has to be resorted to, and by this resource a depth of 4,000 feet may be attained in the undisturbed strata of the earth. The earth's surface is the plane of demarcation for atmospheric and water pressure. The barometer indicates decreased pressure as we go down in mines, the same as in ascending in the air. Water also increases in pressure as the distance beneath the sea. The atmosphere has no known difference in composition at the greatest heights observed. It is its lightness or rarity that affects the lungs at great heights.

TO INVENTORS. An experience of nearly fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequal facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS For which Letters Patent of the United States were Granted January 8, 1895, AND EACH BEARING THAT DATE.

(See note at end of list about copies of these patents.)

- Abacus, L. D. Myers. 532,282
Advertising board, H. D. Stratton. 532,111
Aging or treating spirits, R. C. Scott. 532,389
Alarm. See Burglar alarm. Low pressure alarm.
Amalgamator, A. Tanner. 532,414
Anchor, E. B. 532,354
Animal trap, P. H. Sisson. 532,345
Annealing box, W. H. Bailley. 532,138
Antimony, double salts of, O. O. B. Froelich. 532,150
Applicator, S. J. Bradley. 532,359
Automatic sprinkler or fire extinguisher, W. Esty. 532,268
Axle straightening and setting machine, G. L. Collis. 532,030
Band, clasp, T. W. Jones. 532,070
Barrel leveling and trussing machine, D. A. Gordon. 532,322
Basket or carrier for bottles or other articles, H. M. Kober. 532,324
Bath apparatus, portable shower, W. E. Dobbins. 532,267
Battery. See Storage battery.
Beit lighter, R. M. Whitney. 532,255
Bench book, A. McFarland. 532,387
Bicycle, W. C. Dalgic. 532,143
Bicycle support, A. M. Ribbany. 532,287
Blacking box holder, A. L. Higgins. 532,275
Blacking casing, L. Nearing. 532,283
Blowing engine or compressor, W. E. Good. 532,051
Boiler. See Hot water boiler. Pipe boiler. Wash boiler.
Boiler brace, P. McGregor. 532,386
Books, device for handling, Pfund & Jacob. 532,425
Boomerang, F. G. Faxon. 532,233
Boot or shoe sole or heel paring machine, C. H. & R. H. Southall. 532,170
Boot or shoe soles, cutter for trimming, J. J. Mabry. 532,171
Boots, machine for finishing wool, C. H. Woodbury. 532,352
Bottle filling apparatus, A. Grap. 532,235
Bottle necks, tool for forming, F. Achtenhagen. 532,191
Bottles, tool for forming having lips on, G. L. Jenkins. 532,378
Box fastener, W. H. Howe. 532,067
Brace. See Boiler brace. Folding brace.
Braided moulds, method of and device for finishing coverings of, F. Markgraf. 532,280
Brake for carriage brake. Hoisting apparatus brake. Pneumatic brake.
Brake, J. Gardner. 532,048
Brick drier, W. T. Nicholls. 532,178
Brick kiln, C. J. Holman. 532,154
Brick machine, Rolfe & Johnson. 532,186
Brick or tile cutting machine, J. Thompson. 532,225
Brick truck, A. T. Bemis. 532,356
Brush mould, W. Morrison. 532,210
Brush, wire, J. F. Bigelow. 532,259
Buckle, W. S. Sweet. 532,433
Buckle, suspender, J. Kennedy. 532,381
Burglar alarm, electric, Scholes & Myers. 532,289

- Burner. See Hydrocarbon burner. Oil burner.
Burner for use of crude petroleum, etc., Foster & Hamel. 532,271
Bust developer, G. C. Hardesty. 532,236
Button, collar, F. C. Crow. 532,293
Button, separable, F. S. Nelson. 532,284
Caisson for erecting bridge piers, Chechong & Balensiefer. 532,140
Calculator, Loomis & Phillips. 532,383
Camera diaphragm, M. Levy. 532,326
Car bolster, H. R. Stanford. 532,187
Car coupling, Downey & Hammer. 532,315
Car coupling, J. E. Forsyth. 532,045
Car coupling, C. Frost. 532,272
Car coupling, J. W. Hayward. 532,058
Car coupling, C. Heise. 532,325
Car coupling, E. G. Underhill. 532,275
Car coupling, W. McNames. 532,087
Car coupling, H. Rienow. 532,337
Car coupling, Russell & Perry. 532,102
Car draught attachment, railway, J. Timms. 532,115
Car tender, J. E. McBride. 532,086
Car tender and brake, railway, J. T. Matthews. 532,385
Car guard, street, W. H. Paus. 532,393
Car platform life-saving apparatus, street, W. H. Rodgers. 532,339
Car safety attachment, R. Bustin. 532,360
Car wheel and axle, mine, I. Barker. 532,077
Cars, motor suspension for electric street, S. Hart. 532,057
Carboy holder, J. O. Ratbun. 532,094
Card grinding machine, C. Mills. 532,331
Carriage brake, Brown & Welch. 532,137
Carriage provided with heating apparatus for transporting food, etc., J. Lay. 532,325
Case. See Egg case. Shipment case. Show case.
Cash register, W. G. Latimer. 532,423
Casks, drums, etc., securing beads of, G. Powell. 532,248
Cereal reducing machines, receiving trough and cutter for, H. D. Perky. 532,286
Check wire, mechanism for reeling, W. E. Surace. 532,112
Chimney lifter, F. Ribind. 532,336
Clamp. See Trolley wire clamp.
Clay shingles, die or mould for making, Murray & Welch. 532,065
Clippers, gauge or guard plate for hair, J. K. Priel. 532,335
Clipping machine, electric hair, P. Shannon. 532,188
Clock level, W. J. Marsball. 532,078
Clothes line reel, Woodward & Geisler. 532,130
Clothes to clothes lines, device for attaching, O. Meshane. 532,242
Clutch, Akerley & Co. 532,258
Clutch, friction, W. H. Lindsay. 532,162
Coal separator, J. R. Richardson. 532,427
Coffee roaster, D. H. Marsball. 532,207
Coffin handle, detachable, J. Klar. 532,073
Collar fastener, brace, P. H. Dubois. 532,039
Combination lock, G. W. Dunsworth. 532,041
Combing machine attachment, wool, Smith & DeVries. 532,217
Computing machine, R. E. McClelland. 532,241
Conductor, M. D. Law. 532,161
Conductor support, J. C. Love. 532,164
Cooker, electric, C. W. C. 532,134
Cooking vessel, C. Baumgardner. 532,226
Coop, etc., folding, T. A. Allen. 532,303
Coop for poultry, shipping, M. L. Reeves. 532,212
Copy holder, C. Spiro. 532,406
Copying bath, capillary, Thorp & Gifford. 532,544
Cotton press, D. M. Murray. 532,386
Coupling. See Car coupling. T-bill coupling.
Cultivator, R. S. Chaney. 532,313
Cultivator, B. F. Harford. 532,055
Curling iron, O. G. Dunnom. 532,317
Curling iron, Howard & Heilstrom. 532,064
Curtain stretcher, W. A. Cochran. 532,382
Curtain stretcher, C. Linder. 532,382
Cutter. See Potato cutter.
Displaying reading matter, device for, H. B. Butts. 532,204
Distilling and sterilizing water, apparatus for, J. Narel. 532,320
Ditching machine, H. M. & A. J. Fuller. 532,369
Door, E. Hines. 532,201
Door, flexible, E. Brown. 532,021
Door holder, H. Fletcher. 532,367
Door stop, L. Funk. 532,151
Draught equalizer, Smith & Barlow. 532,345
Drawing and evening sliver, machine for, W. V. Trefball. 532,405
Drier. See Brick drier. Portable drier.
Drying kiln, W. G. Galloway. 532,218
Drill. See Hand drill.
Duplicating machine, Jas. A. D. Klaber. 532,405
Dust collecting system, H. L. Day. 532,144
Dust separator, McNaughton & Seymour. 532,389
Dye, blue diazo, A. Weinberg. 532,125
Easel, desk, R. M. Hitch. 532,033
Eaves trough, W. H. Harris. 532,416
Egg case, W. C. 532,274
Electric conductor tension device, J. C. Love. 532,186
Electric wires, crossarm for support of, E. J. Bullock. 532,260
Elevator and dump, R. Bullis. 532,022
Elevator guide post clamping device, M. Christopherson. 532,414
Elevator safety device, S. P. Kay. 532,158
Eliograph, J. Hottinger. 532,155
End gates, locking device for wagon, J. T. Duncan. 532,040
Engine. See Blowing engine. Gas engine. Gas, oil or vapor engine. Gas or petroleum engine. Hydrocarbon engine. Rotary engine. Steam engine.
Engine attachment, steam, M. H. Molloy. 532,083
Entrails, machine for cutting and cleaning, 11 463
Envelops, A. D. Klaber. 532,206
Escutcheon, C. R. Uhlmann. 532,223
Fastening and driving tool therefor, metallic, J. A. Guibaud. 532,052
Feedwater purifier, J. Mohr. 532,082
Fence, L. M. Shirteff. 532,292
Fence machine, Wm. Green. E. S. Moran. 532,241
Fence post, Pitney & Gardner. 532,246
Fermenting vat, C. Hauger. 532,373
File cutting machine, A. Weed. 532,123
