TO INVENTORS.
 An experience of nearly fifty years, and the preparation
 of more than one hundred thousand applications for pat-
 ents at home and abroad, enable us to understand the
 laws and practice on both continents, and to possess un-
 equalled facilities for procuring patents everywhere. A
 synopsis of the patent laws of the United States and all
 foreign countries may be had on application, and persons
 contemplating the securing of patents, either at home or
 abroad, are invited to write to this office for prices,
 which are low, in accordance with the times and our ex-
 tensive facilities for conducting the business. Address
MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broad-
 way, New York.

Marks' Patent Artificial Limbs

Have been indorsed by the Scientific American
 from 1853 to 1896, as illustrated below.

They have stood the tests of
 nearly half a century.
 They are to-day pre-eminent
 throughout the world.

NEW PATENTS OF 1895 AND
 IMPORTANT IMPROVEMENTS.

Marks' Patent Artificial Limbs with
 Rubber Hands and Feet are Natural in
 Action, Noiseless in Motion, and the
 Most Durable in Construction.

The use of rubber hands and feet on
 artificial limbs simplifies the construc-
 tion, so that limbs can be worn for many
 years without requiring repairs. Per-
 sons engaged in every conceivable occu-
 pation operate with them to great ad-
 vantage.

Over 17,000 in use, scattered in all
 parts of the world. Eminent surgeons
 and competent judges commend the
 Rubber Foot and Hand for their many
 advantages. At every industrial exhibi-
 tion where exhibited they have re-
 ceived the highest awards. They are
 indorsed and purchased by the United States and Foreign Governments. A treatise, containing 430
 pages, with over 800 illustrations, sent free. Also a formula for taking measurements by which limbs
 can be made and sent to all parts of the world, with fit guaranteed. Address

BIG WAGES

and big salaries depend on a man's abilities. They depend on what he knows. The men who work the longest hours and get the smallest pay are those who put their brains to the least use. There are three pursuits in which the wages and salaries are liberal to bright people. These people are skilled mechanics, engineers and machinists. The more they know, the more pay they get. Lord's Power and Machinery Magazine will teach ambitious workmen the most valuable lessons. It will be worth more to them in one month than it costs for five years. It covers most thoroughly the entire field of mechanics, engineering and machinery. Published monthly for \$1 a year. Send 10 cents for a sample copy.

A Chance for Mechanics To Obtain a Cycle FREE.

The Perfection of the Bicycle is called the **RACYCLE NARROW TREAD** built by the **Miami Cycle and Mfg. Co., Middletown, O.**

We will present ABSOLUTELY FREE, express prepaid, a \$100. 1896, **RACYCLE NARROW TREAD**, to the mechanic or party who is the first to send us the correct solution of the following:

Cut No. 1 is a sectional view of the RACYCLE Crank Hanger. Cut No. 2, a sectional view of the Crank Hanger generally used in Cycles throughout the world. The distance from outside to outside of crank in the cuts above, is the same, viz: 4 5/8 inches; but the ball bearings in cut No. 1 (RACYCLE) are in the hubs of the cranks, making said bearings 1/4 inches farther apart than in cut No. 2 (Bicycle). The Sprocket in the RACYCLE hanger is between the bearings, but in the Bicycle hanger, the Sprocket overhangs the right hand bearing, making more friction in the Bicycle hanger than in the RACYCLE hanger.
The problem to solve is this: With a foot pressure of 150 pounds on the pedal of each crank in the illustrations above, what advantage has Fig. No. 1 over Fig. No. 2?
Cut the drawings out, or make exact copy, and mark on drawing your answer. Send with your name and full address to Advertising Department of the Miami Cycle and Mfg. Co., Middletown, O. Each solution will be answered and winner's name and answer will be published.

CULVER'S

PROGRESSIVE STEAM SEPARATOR

insures dry steam by carrying away at right angles the water of condensation from the path of steam current. The Deflector plates in cut are separately cast and placed in position in body of Separator, insuring a perfect casting. Has a series of alternately disposed deflectors and a discharge from each, whereby the moisture is condensed and removed from the path of the steam. Culver's Progressive Steam Separator is for the above reasons the best thing ever invented for all steam users and those who know the importance of having dry steam for their Engines, Pumps, etc. Send for illustrated catalogue.
