Scientific American.

ESTABLISHED 1845

MUNN & CO., - - - EDITORS AND PROPRIETORS.

PUBLISHED WEEKLY AT

No. 361 BROADWAY, - " NEW YORK.

TERMS FOR THE SCIENTIFIC AMERICAN. (Established 1845.)

The Scientific American Supplement (Established 1876)

(ESTABLISHED IS A GRADULE OF THE SUPPLEMENT IS SAIDSTRONG TO THE SUPPLEMENT IS SAIDSTRONG WEEKLY. EVERY NUMBER CONTAINS IS OCTAVO PAGES, UNIFORM IN SIZE WITH SCIENTIFIC AMERICAN. Terms of subscription for SUPPLEMENT, \$5.00 a year, for the U.S., Canada or Mexico. \$6.50 a year, or £14.85, to foreign countries belonging to the Postal Union. Single copies 10 cents, Sold by all newsdealers throughout the country. See prospectus, last page. Combined Rates.—The SCIENTIFIC AMERICA" and SUPPLEMENT will be sent for one year, to one address in U.S., Canada or Mexico, on receipt of seven dollars. To foreign countries, eight dollars and lifty cents a year, or £1 Hs. Ild., postage prepaid.

Building Edition of Scientific American.

(Established 1885.)

THE BUILDING EDITION OF THE SCIENTIFIC AMERICAN is a large and splendidly illustrated periodical, issued monthly, containing floor plans and perspective views pertaining to modern architecture. Each number is illustrated with beautiful plates, showing desirable dwellings, public buildings and architectural work in great variety. To architects, builders, and all wao contemplate building this work is invaluable.

Single copies 25 cents. By mail, to any part of the United States, Canada or Mexico, \$2.50 a year. To foreign countries, \$3.00 a year, or £2 12s. 4d. Combined rate for BUILDING EDITION with SCIENTIFIC AMERICAN. 10 one address, \$5.00 a year. To foreign countries, \$6.50 a year, or £2 16s. 9d. Combined rate for BUILDING EDITION. SCIENTIFIC AMERICAN, and SUPPLEMENT, \$9.00 a year. To foreign countries, \$11.00 a year, or £2 5s. 2d., postage prepand.

Export Edition of the Scientific American (Established 1878)

with which is incorporated "LA AMERICA CENTIFICA F INDUSTRIAL," or Spanish edition of the SCIENTIFIC AMERICAN, published monthly, uniform in size and typography with the SCIENTIFIC AMERICAN. Every number contains about 109 pages, profusely illustrated. It is the finest scientific industrial export paper published. It circulates throughout Cuba, the West Indies, Mexico, Central and South America, Spain and Spanish possessions—wherever the Spanish language is spoken. THE SCIENTIFIC AMERICAN EXPORT EDITION has a large guaranteed circulation in all commercial places throughout the world. \$3.00 a year, ow 100 128.44., postpaid to any part of the world. Single copies, 25 cents.

WINN & CO., Publishers, 361 Broadway, New York. The Safest way to remit is by postal order, express money order, that or bank check. Make all remittances payable to order of MUNN & CO.

Be Readers are specially requested to notify the publishers in case of any failure, delay, or irregularity in receipt of papers.

TABLE OF CONTENTS OF

Scientific American Supplement

No. 1114.

For the Week Ending May 8, 1897.

Price 10 cents. For sale by all newsdealers.	GE
1. ASTRONOMY.—Variation of Latitude and Constant of Aberration from Observations at Columbia University.—By J. K. REES,	
H. JACOBY, and H. S. DAVIS.—Aggregate determination of the latitude of the observatory of Columbia University	7810
III. CVCLING.—Change of Gear for Bicycles.—Archereau's multi-	78 10
speed bicycle gear.—A French effort at solving a difficult problem. —3 illustrations	7809
IV. ELECTRICAL ENGINEERING.—The Synchronograph.—By Dr. A. C. CREHORE and Lieut. GEORGE O. SQUIER.—An interesting article on a new method of transmitting intelligence by the alternating current.—12 illustrations.	7811 7811
Electrical Engineering in Germany I V. GEOLOGY.—On Recent Borings in Coral Reefs.—Darwin's theory of the formation of coral reefs by subsidence probably confuted.	
-Slight thickness of coral formations. 1 VI. MILITARY TACTICS.—Dogs in War.—The general use of dogs in the Continental armies, with notes on the dogs used in different armies	
THE MICORIE AND OUR A COLOR Delega for Court A - mand and	
vii. 318 ELLAN EQUE. A Silver Palace for Uniana. A great attraction for the Trans-Mississippi Exposition for next year.—A palace 400 feet square covered with rolled silver.——1 The Greco-Turkish War.—The Eastern question discussed. —An interesting review of the international plases thereof and proceed on the conventions of trans 7.5 illustrations.	141
notes on the operations of war.—7 illustrations. Note on the United States Mint. Bingineering Notes. Blectrical Notes. Miscellaneous Notes.	7800 7810 17805
Selected Folimulæ	7805 17804
VIII. NAVAL ENGINEERING.—Ascertaining the Stability of Ships.—A mechanical method of ascertaining the statical stability of ships.—By Mr. A.G. RAMAGE. Member I.N.A.—A simpleappara- tus for ascertaining by experiments on sectional models the sta-	
tus for ascertaining by experiments on sectional models the stability of ships.—8 illustrations. Comparison of the Stability of the Alabama and the Prince George.—Interesting discussion of the stability of recent war ships and how to increase it to an adequate extent.—The use of bilge keels; danger of a modern battleship in a gale.—6 illustra-	
tions 1X. PHOTOGRAPHY.—Chassagne's Photographic Color Process.	17802
—An. elaborate list of formulæ for this interesting process of producing colored photographs X. PHYSICS.—A New[Roentgen Lamp.—A special tube for Roentgen	17810
ray work of high power and convenient manipulation.—lillustra- tion. On a Ring Pendulum for Absolute Determinations of Gravity. By T. C. MENDENHALL and A. S. KIMBALL.—A recent determi-	17810
nation of the constant of gravity by an absolute method	17810
XI. RAILROAD ENGINEERING.—The Evolution of the American Locomotive.—By HERBERT T. WALKER.—An interesting article continued.—The first Rogers locomotive of 1837 and other early examples described and illustrated, with table of data.—Sillustrations.	
tions. The Zone System in Hungary.—The zone system of fixing fares as applied in Hungary.—Defects and inconveniences of the system.	
XII. TECHNOLOGY.—Hat Making in Italy.—A very interesting note on the manufacture of hats of different classes worn in Italy	
XIII. TRAVEL AND EXPLORATION.—Benares the Ancient.—A very graphic and popular account of the famous city, its curiosities, and objects of art	1780
Note on Water Gas in Boston	1290

A GRACEFUL ACT OF INTERNATIONAL COURTESY.

We mentioned in our previous issue that the manuscript log of the Mayflower had been delivered to the United States through its representative, Ambassador Bayard, on an order given in the Consistory Court of London. In this issue we present our readers with a photographic reproduction of this priceless relic, which, in point of its unrivaled historic interest, may be said to stand quite alone.

The manuscript volume of the log, at the time of the petition for its removal to the United States, formed part of the library of Fulham Palace, the residence of the Bishop of London, and among the precedents which were quoted on behalf of the petition was the case of the Library Company of Philadelphia, This company discovered that certain manuscript volumes presented to the library in 1799 formed part of the national archives of Great Britain, as was proved by the fact that they consisted of official correspondence which bore the sign manual of James I and of Elizabeth. The volumes were at once restored to Great Britain. and the Master of the Rolls, Lord Romilly, into whose official care they passed, acknowledged the great obligation under which the British nation had been placed, and expressed his conviction that such acts of courtesy and friendliness would tend to draw closer the ties connecting the two countries.

The return of the log of the Mayflower to this country has been made with the same readiness and in the same friendly spirit which characterized the Philadelphia transfer, and, if anything, we are placed under an even greater debt of obligation than that which Lard Romilly acknowledged on behalf of England in the previous instance. Without depreciating in the least degree the generous spirit in which the Philadelphia transfer was made, it may be pointed out that the British archives which were voluntarily surrendered related to England alone, and had no historical interest to connect them with this country. The records of the Mayflower, on the other hand, have naturally a great intrinsic interest for the English people, as being the story of the struggles of early English colonists who had the full sympathy of the middle English classes, from which they came and of whose sterling qualities they were faithful exponents.

The fact that there was no opposition to the request of Ambassador Bayard, and that, after this valuable document had been over a century in their undisputed toward this country.

FREE DISTRIBUTION OF SEEDS BY THE GOVERNMENT.

The system is too well known to the majority of our has been in the habit of doling out annually to Congressmen for distribution among their constituents about \$140,000 worth of seeds. This has been done with the expressed object of securing reports from the users as to the results obtained. Whatever theoretical advantage there may have been in the proposal, it has failed utterly to produce any practical results, and according to all reports the experiment has degene- a minute, and they confidently assert that between rated into a positive farce. The United States Agricultural Department in its report on this subject says: "While one purpose of the law was to secure reports from the receivers as to the results of actual experiment, the reports actually received did not amount to one-hundredth of one per cent of the persons supplied. A careful review of the department reports, especially these of the chiefs of the seed division during the past decade, in which over \$1,000,-0 000 was expended for free seed distribution, fails to reveal a single instance of benefit to agriculture attribu-1 of the century, is the result of the joint labors of table to this distribution." In the face of this official Lieutenant G.O. Squier and Prof. A.C. Crehore, and it statement, one asks with no small amount of bewildercently passed both houses of Congress, contain an trical Engineers on April 20. The paper, with complete appropriation of \$150,000 for carrying on this palpa-|illustrations, is published in the current issue of the ble folly? If Congressmen can see any sound ethical or political reasons for a paternal distribution of seeds, why should they stop just here? Why not appropriate another \$150,000 for spades, plows and fertilbe hoped that this year will see the last of it.

THE FASTEST VESSEL AFLOAT.

It is a great triumph for the "rotary impact" form 10 a steamship should have driven it at a speed far in excess of the world's record, yet this is what has recently been achieved by the engines of the torpedo three stages and has shown remarkable economy, an $|\det$, and a break lasting from the beginning of a posi-

engine of this type which is at work in the electricworks, Cambridge, England, having achieved a consumption of 15.1 pounds of steam per indicated horse power per hour. The Turbinia was at first fitted with a single engine and screw, and in the trials the "cavitation," or vacuum formed behind the propeller, was such that very disappointing results followed. The single turbine was removed and replaced by three separate turbines directly coupled to three screw shafts, the turbines being respectively the high pressure, intermediate and low pressure elements of a triple expansion engine. The results were truly remarkable, a speed of 29.6 knots being realized. After further experiment to determine the proper pitch for the screws, a series of trial runs were made on April 1 of this year, when a mean speed of 31.01 knots an hour was realized. The particulars of the run were as follows:

Revolutions of engines (mean)	2.100
Steam pressure	
Thrust, horse power (calculated)	
Indicated "	1,576
Consumption of steam per indicated horse power per	•
bour	15 86
Indicated horse power per ton of total machinery	72.1

Nine days later the Turbinia realized a speed of 323/4 knots an hour, thus surpassing the world's record by about a knot and a half. This is equivalent to 37% miles an hour, or equal to the average speed of many so-called express trains.

WAR MEASURES IN TIME OF PEACE.

The naval armor question seems to be getting into a state of hopeless entanglement, and the proposal of Senator Chandler that the government shall forcibly seize the plant of the Bethlehem Iron Company and proceed to make its own armor plate therewith simply makes "confusion worse confounded." The law by which the government would be enabled to take possession of these works for the manufacture of war material is intended to cover cases of emergency in time of war; but it has never been construed to give the government the same right in a period of profound peace such as the present. It is reassuring to learn that the bill is likely to receive very little, if any, support. Secretary Long's letter to Congress relative to the bids in answer to the department's advertisement of March 10 states that the department did not feel justified in accepting or rejecting the bid of the Illinois Steel Company, and points out that the government is possession, it should be so freely surrendered at our liable to incur heavy expense due to the delay in first request, is another striking evidence of the friendly furnishing armor for the three battleships recently laid feeling unselfishly entertained by the English people down, if some steps are not immediately taken to procure the needed supply. The secretary closes by recommending that authority be given the department to make contracts at a price not exceeding \$400 There is a growing agitation against what is known per ton, "the rate recommended by my predecessor." as the free distribution of seed by the government. This figure was arrived at as being a just price after the question had been carefully investigated by a readers to need any explanation; but for the benefit board of experts, and under the circumstances it looks of city residents it may be said that the government as though the recommendation of Secretary Long was the easiest way out of the deadlock.

HIGH SPEED TELEGRAPHY.

By making use of the alternating current and special designs of receiver and transmitter, two well-known American specialists have succeeded in sending messages over a wire at the rate of twelve hundred words three thousand and six thousand words a minute may be dispatched by the same system between points that are a thousand miles apart. The new telegraphy marks a wonderful advance over existing methods. An operator using the Morse key sends only forty words a minute, and by the Wheatstone system about one hundred and fifty words can be sent over a single wire in the same time.

This epoch-marking invention, which, if it fulfills its early promise, will rank as one of the greatest was first announced in a paper which was read at the ment, why did the last agricultural bill, which re- New York meeting of the American Institute of Elec-|SUPPLEMENT, and it will be found to be one of the most valuable contributions ever made to the literature upon this subject.

The new scheme, as we have said, uses an alternating izers? As a matter of fact, the system is wrong in in place of a constant current. In the latter, a break in principle as well as a failure in practice, and it is to the contact of two wire terminals causes the emission of a spark; but if an alternating current be broken at the zero line, that is just where the alternation takes place between a positive and negative wave, there will be no spark. The Squier and Crehore device takes advantage of steam engine that the first one of this type fitted to of this feature and interrupts and restores the current at the zero points of oscillation. The operator adjusts his instrument until the sparking disappears, at which point he knows that its action is synchronous with the os boat Turbinia. This little vessel of 100 feet length, 9 frequency of the current employed. Hence these genfeet beam, and 44½ tons displacement, was built at themen have given their telegraph the name of syn-Newcastle, England, specially for a marine trial of the chronograph. If the Morse alphabet of dots and dashes compound steam turbine designed by the Hon. Charles is employed, a break in the current lasting from the be-Parsons. The Parsons turbine utilizes the steam in ginning of a positive wave to its end would signify a
