ACCIDENT AT THE YERKES OBSERVATORY.

The Yerkes Observatory of the University of Chicago. at Williams Bay, Wis., will be closed for the summer on account of an accident which occurred on May 29. The great movable floor of the great dome fell 45 feet and rested at an angle of 45 degrees, with one edge of the floor against the bottom of the pit and the other edge 3 feet with interest.

AN IMPORTANT FIND OF ANCIENT PAPYRI.

A great find of ancient papyri in Egypt has been

for the Egyptian Exploration Fund at Behneseh; Plans are now being perfected by Dr. Billings to many ancient rubbish mounds yielding a rich store. systematize the three large collections with a view to The quantity of rolls found in three of the mounds early Arab times. Each century is largely represented. Most of the documents are written in Greek, with a hope in digging at the site of Oxyrynchus of finding works on music. The works on sports and English early Christian documents is realized, for among the history will be brought to the Astor Library. When papyri is a leaf from a third century papyrus book containing a collection of the sayings of Christ. Some of the present Lenox Library would make a magnificent home sayings are not in the Gospel and others exhibit diverfor the New York Historical Society or some other signs from the text of the Gospels. It is thought that, when the papyri are examined in detail, further discov-

eries of Christian records, as well as fragments of lost classical literature, will be found, since in some of the mounds a large proportion of the papyri are written in uncials, which were largely employed during the first two centuries of the Christian era. One hundred and fifty rolls which in many cases are several feet long have been retained in Gizeh and the rest are on the way to England. Besides the papyri, a number of coins, two hundred inscribed tiles, bronze and ivory ornaments and other objects of the Roman and Byzantine periods have been recovered. The New York Sun deserves credit for cabling all the details obtainable of the find.

THE HARTFORD MEETING OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS.

The opening session of the Hartford meeting of the American Society of Mechanical Engineers was held on May 25. Sessions for the reading and discussions of papers were held on Wednesday, Thursday and Friday mornings and Friday evening. The afternoons were devoted to excursions to interesting shops, institutions, etc. in the neighborhood. On Wednesday, May 26, a reception was given by the President and Faculty of Trinity College. A large number of interesting papers were read, including one by Dr. Leonard Waldo, on the "History of the Development of the Bicycle;" "Hygrometric Properties of Coal," by Prof. R. C. Carpenter; "Electricity vs. Shafting in a Machine Shop," by Prof. Charles H. Benjamin ; "Rating Electric Power Plants on the Heat Unit Standard," by Prof. William S. Aldrich; "A Continuous Steam Engine Indicator," by Prof. Thomas Gray. These were only a few of the very interesting papers which were read. The members of the society were well entertained in Hartford, and the excursions in the neighborhood were very interesting.

Among the excursions were trips to visit the third rail system of the N.Y. & H. R.R., the plant of the Berlin Iron Bridge Company, the Pope Manufacturing Company, the Pratt & Whitney Company, the Billings & Spencer Company, the Hartford Rubber Works and other establishments. The Hartford meeting of the society was the largest ever held outside of New York City, 402 members and guests being registered as in attendance. The legislature being in session at the time, the hotels could not accommodate the crowd, so that many members were able to enjoy the hospitality of some of Hartford's homes.

---THE LIQUEFACTION OF FLUORINE.

The distinguished chemist Prof. James Dewar has just succeeded in liquefying fluorine gas at a temperature of -185° C. The product was a yellow mobile liquid which had lost chemical activity. Great interest has been felt in the element fluorine since its isolation by M. Moissan, who described it in his celebrated paper in the Annales de Chimie et de Physique for December, 1887. The isolation of flourine was described in detail in the issue of the SCIENTIFIC AMERICAN SUPPLEMENT, January 22, 1887. Further researches upon the element were given in the same paper for building, and sent to the University officers to come to mineral fluorspar, which crystallizes in fine cubes of vathe building and commence an investigation. "The rious colors. Flourine also occurs in small quantity as the University, "has not been decided, and probably intense affinity for metals and for silicon for a long will not until representatives of all the parties interested time prevented the attempts to isolate it from being sucare on the ground. The big telescope was not injured cessful. The efforts of the chemists to investigate it in in the falling of the floor in the least, and the damage | a satisfactory manner were baffled, because its chemical is confined to the floor itself and the machinery immediate | affinities were so numerous and acute that, when ately connected with it. As to how the accident occurred driven from one combination, it instantly combined we have not come to a conclusion. I think the floor with some other substance with which it came in conwill be again in position inside of sixty days." The tact. Owing to this difficulty of investigating its qualiresults of the official investigation will be looked for ties, there has been some uncertainty as to its elementary nature. It is probable that Prof. Dewar's discovery will be of great importance, from the fact CHELSEA district in London utilizes its street refuse that the liquefied gas loses its chemical activity. Full details of Prof. Dewar's discovery are at present lackfor with great interest.

by separating the rags and paper, which are converted into brown wrapping paper, while the rest of the refuse ing, as only a cablegram was received at the time of is burned in the furnaces of the reducing works and going to press, but further particulars will be looked
