and suggest promises of gain that can never be realiz- reputation which is world wide and grows with the our dry dock accommodation. ed; and that while evincing in their publications this tearful solicitude for the honest, well-meaning, and wholly unsuspecting person who is so liable to be up or down the Hudson River must have noticed wronged by sharpers, the respondents themselves were that the aspect of the Palisades is being rapidly suggested that the amount - \$5,775,000 - needed for in fact doing the very thing they so feelingly deprecate changed by the numerous quarries which have been these should be voted in annual installments, as is now and condemn; and indeed issued the very character of opened along its face. Where this has been done, the literature and published the kind of advertisement soft brown and gray tints of the cliffs have been de- cruisers. The list of the proposed docks is as follows: they criticise and denounce; and have so successfully faced by the dirty gray patch which indicates a quaremployed these means and agencies that more than ry, and the many-tinted foliage which clothes the base 32,000 persons have been induced to establish the rela- of the cliffs has given place to unsightly stone heaps, tion of clients of John Wedderburn & Company, and wharves and hoisting derricks. that of the 33,000 clients, less than 1,600 applications have been allowed."

Prior to his conclusion, the Commissioner lavs stress upon the fact that "if the business and the methods and practices of the respondents had been tolerable and terest the government in the question of its reservation places : At New London, fresh water basin, with dock, of a character that could be defended, the respondents and their backers and indorsers would have made all haste to make known, not only to the Commissioner and to the Secretary, but to the public that was interested to know, that they were carrying on a legitimate business in a legitimate way; but instead of that they have made substantially no showing at all, either in extenuation or defense of their offenses or in answer to the questions propounded, which were rendered necessary by reason of the facts hereinbefore recited, and which were not answered, nor was one of them answered."

The final clause of the decision is as follows:

'My conclusion is, and I so decide, that John Wedsolicitors before this office, been guilty of gross misconing before the Department of the Interior, and I recom- is not in point, inasmuch as these lands were already in mend that the honorable Secretary so order."

The following is the letter of the Secretary of the Interior confirming the decision of the Commissioner of Patents :

## DEPARTMENT OF THE INTERIOR. WASHINGTON, September 30, 1897.

THE COMMISSIONER OF PATENTS: Sir: I have examined with great care your report on the John Wedderburn and John Wedderburn & Company cases, together with the report of Assistant Commissioner Greeley, and herewith return both reports, expressing my full approval of the reports of your office. I request that when the reports are printed you will transmit a copy to the Postmaster-Gen ral and that his attention be especially directed to the use that has been made of the United States mails by the John Wedderburn Company. Very respectfully,

## C. N. BLISS, Secretary,

NOTE.-Under the regulations of the Patent Office, the disbarred firm cannot prosecute pending applications or file new ones. The only remedy available to their clients for the recovery of fees wrongfully or fraudulently obtained, as suggested by the Assistant nificent wall of rock could certainly be carried out for a Commissioner, is to bring the facts to the attention of the District Attorney of Washington, who can bring an action against the disbarred firm to recover. Those who do not desire to take this step have the right to transfer their business for further prosecution to registered and approved attorneys.

# IMPENDING CHANGES IN UNITED STATES PATENT LAW.

On January 1, 1898, important changes in the patent laws of the United States will take effect. These changes will bear principally upon the relation of applications for United States patents and grants made upon such applications to foreign patents for the same invention. In a former number (issue of March 20, 1897) we have commented at length upon the latest amendments to the patent law. We would now draw the attention of our readers, especially those residing abroad and holding foreign patents for inventions not protected in this country, to the necessity of filing of peace the fouling of the steel hulls necessitates United States applications covering such inventions before January 1, 1898. After that date, applications for United States patents may be rejected if filed more than seven months after the date of filing the ment of any importance will almost certainly necessiearliest foreign application. Under the present law, tate the subsequent docking of many of the ships enhowever, valid United States patents may be obtained for inventions patented abroad several years ago, provided the foreign patent is in force at the time the the holder of the foreign patent, but to the American manufacturer or capitalist who desires to secure in this country the monopoly for an invention patented abroad and not so protected here.

passing years.

Everyone who has had occasion of late years to pass

It has been suggested that on account of its commanding height this ridge of rock would be a menace to the safety of New York if it should fall into the purposes. Another scheme suggests that the government purchase a strip of land along the river from Fort Lee to Piermont, wide enough to include all the natural features which are threatened, and preserve them from future depredations. A third proposition contemplates a joint purchase by the States of New York and New Jersey. Of these propositions the first is opposed by military men, on the ground that the heights have no such strategic value as would justify their fortification. An attack on New York is never likely to be made by land and by way of the Hudson Valley; the city is most vulnerable on its seaward side, and the proper place for defensive works is at Sandy Hook and ernment to undertake the work of preservation as the possession of the government.

It remains then for the two States affected to undertake the work. They are about equally interested: for although the larger part of the Palisades is in New Jersey, its natural beauties are only visible from the New York side of the river.

The agitation of this important question, which, altaken up by the women's clubs of New Jersey. It has of docks for a nation's navy. been proposed to build a continuous drive at the foot of the cliffs from Fort Lee to Piermont, a distance of thirteen miles, thus affording, with the present Hudson docks would compare favorably in cost with the dismiles in extent. The idea is attractive, though we fear be built or not, the purchase and care of this truly magsum which would be moderate in proportion to the good work achieved.

# THE NAVAL DRY DOCK PROBLEM.

There is no problem connected with the naval affairs construction under way. of the United States of such paramount importance as the construction of adequate dry docks. Unfortunately there is no naval problem regarding which the public is so ignorant and apathetic. To awaken an intelligent interest in the matter has been the endeavor of every | says the Monthly Weather Review. This seems to writer and journal of importance in the country; but the effort proved futile until the country was subjected to the humiliation of having to send its finest battleship to a British dockyard to have its bottom scraped and painted.

Ridiculous as the situation was, it served to teach the country the absolute necessity of providing dry docks for our navy if that navy is to be available in time of war. The dry dock is as much a concomitant of the modern warship as her engines or fuel. In time docking and cleaning at intervals of a few months, and what little experience has been gained of the behavior of modern warships in action shows that an engagegaged.

The board of experts which was recently appointed by Admiral Bunce to inquire into the docking require- of statistics by physicians, and any conclusions that total cost of \$11,075,000. We have at present eleven applied to the public welfare. such docks, of which only three can accommodate the largest battleships. With the construction of the new docks we would possess twenty-one altogether, none too many, if we consider the probable increase of the navy in the near future. Of the total 622 dry docks in the world, about 348 are owned by Great Britain, and of these 266 are situ-

alluring advertisements which inspire delusive hopes second greatest city of the world, it has acquired a that our recent naval activity has greatly outstripped

The report states that while an outlay of \$11,075,000 is recommended, there is no urgent necessity for constructing more than five of the docks at present. It is done in the construction of the new battleships and At Boston, one concrete dock 700 feet long, \$1,500,000; at New York, one concrete dock 500 feet long, \$1,200,000; at Norfolk, one concrete dock 500 feet long, \$1,100,000; at Port Royal, improvements, \$25,000; at New Orleans, floating graving dock, \$750,000; at Mare Island, one concrete dock, 500 feet long, \$1,100,000. Total, \$5,675,000. In addition to the docks urgently needed, hands of an enemy, and steps have been taken to in-, the board recommends that structures be built at these for the emplacement of guns and for general military \$1,000,000; at Newport News, a steel floating graving dock, \$650,000; at Tortugas, a steel floating graving dock, \$650,000; at San Francisco, concrete dock at Yerba Buena, \$1,500,000; at San Pedro, concrete dock 700 feet in length, \$1,500,000. The report also states that ultimately dry docks should be constructed at Pensacola, Florida, and Galveston, Texas.

It will be noticed that the materials of which our existing dry docks have been built, viz., stone and wood, is not recommended for the new structures, steel and concrete taking their place. As regards concrete, it may be said that if the work is well carried out a dry dock of this material has all the advantages of solidity and permanence offered by one of granite withderburn and John Wedderburn & Company have, as on the Sound. Nor is it within the province of the gov- out the drawback of excessive cost. The difference in cost is great; the proposed concrete dock at Mare duct, and that they should be disbarred from practic- such. The case of the Yellowstone and Yosemite Parks, Island is to cost but \$1,100,000 against the reputed cost of \$4,000,000 for the present stone dock. Moreover, a concrete dock can be built in considerably less time.

There will be objections raised against the complete abandonment of the timber construction by those who have faith in this system. But while it is true that there are timber docks that have been giving good service for from 30 to 40 years, there have been failures, or partial failures, like that at the Brooklyn though technically a State matter, has sentimental navy yard, which render the system hazardous in a grounds which make it of national importance, is being work of such pressing necessity as the speedy provision

An even greater innovation would be the construction of steel floating and graving docks, as proposed. The County Boulevard, a continuous driveway nearly thirty carded timber docks, the estimate of \$650,000 being about equal to the cost of the Brooklyn dry dock that the cost would be prohibitive. Whether the drive No. 3, and probably less than the latter structure will have cost by the time it is put in serviceable shape. It also has the advantage of being movable, at least within sheltered waters.

> The policy is a liberal one; but not more liberal than the situation demands, and it is sincerely to be hoped that Congress will act promptly in placing the new

## CLIMATE AND CRIME.

The public press has lately given much attention to the subject of the relation between weather and crime, have started with a private communication from some Weather Bureau observer and has greatly interested every one. A preliminary collection of statistics seems to indicate that crime is more prevalent in hot weather.

The Chief of the Weather Bureau has expressed his opinion that it is utterly wild to contemplate at present the possibility of issuing predictions of prevalence of crime, and he has no intention of attempting it. In fact, there is no official investigation of the subject being made or contemplated in the Weather Bureau and no legal authority for doing so, even if it were considered desirable, which it is not. The statistics of disease have generally shown a very broad connection between climate and disease and the investigation of that subject is ordered by Congress, but that has no official connection with crime. The discussion of such difficult subjects is a matter for the careful study

# • • • • • PRESERVATION OF THE PALISADES OF THE HUDSON.

Perhaps in all America, if we except Niagara Falls, there is no object of natural beauty and grandeur that ated in England, Ireland, and Scotland. So essential enjoys a wider reputation than the majestic Palisades does that country consider the dry docks to her comof the Hudson. This extended line of natural ram- mercial and naval supremacy that she possesses as till they assume a bluish violet color, and they are parts, which looks down on one side upon the fertile many as 10 in Australia, 15 in China, 30 in India and then further toned in a bath of: valleys of New Jersey and on the other watches the the East Indies, and in Canada and British Columbia swift encroachment of New York City upon the wooded there are 12. At the great naval station at Portsmouth heights of Manhattan Island and the rolling country there are nine dry docks with 3316 to 4116 feet of water to the north, would be noted for its natural beauty on the sills, and the other great dockyards are all libeven if it were far removed from the haunts of civili- erally supplied. Now, although our needs do not call After washing, the prints are fixed.-The British Jourzation. Standing, as it does, at the very gates of the for any such provision as this, it is nevertheless certain hal of Photography.
