

chitecture was made; two centuries and a half later this had grown into the architecture which we admire; from this it came to pass that Roman building was what it was, and from Roman building has come all that of later Europe." The history of architecture in Europe from 350 A.D. up to recent times is covered by nine chapters, in which is crowded a vast deal of valuable information and most interesting comment. The book is embellished with ten plates and 256 other illustrations.

A TREATISE ON ARCHES By Malverd A. Howe, C. E. New York: John Wiley & Sons. Pp. 371. Price \$4.

This is a book particularly designed to facilitate the work of the practicing engineer, saving him time in the making of many essential mathematical demonstrations, and furnishing formulæ and tables adapted to his wants for a wide variety of work. The author is professor of civil engineering in Rose Polytechnic Institute, and the demonstrations are designed to be such as may be readily followed by senior students in technical schools.

The large and valuable catalogue of manufacturers' and machinists' hardware, issued by Charles H. Bealy & Company, of Chicago, presents an extent and variety of tools and supplies which one seldom finds in a single volume. It comprises 300 closely printed pages in fine type, with profuse illustrations and ample index, the articles catalogued including almost everything from an engine lathe to calipers or from a differential pulley to a scratchawl.

SCIENTIFIC AMERICAN BUILDING EDITION

JULY, 1897.—(No. 141.)

TABLE OF CONTENTS.

- No. 1. Perspective elevation, in colors, and floor plans of a Colonial residence at Overbrook, Pa. A unique design. Mr. Thomas P. Lonsdale, architect, Philadelphia, Pa.
No. 2. Colonial house at Richmond Hill, N. Y., recently erected at a cost of \$4,200. Perspective view and floor plans. An attractive and pleasing design. Architects, Messrs. Haugaard Brothers, Richmond Hill, N. Y.
No. 3. A residence, in the Colonial style, recently erected at Larchmont, N. Y., for Mr. William Murray, at a cost of \$7,700 complete. Two perspective elevations and floor plans. A pleasing design, with excellent interior arrangement. Mr. Frank A. Moore, architect, New York City.
No. 4. A cottage at Prohibition Park, Staten Island, recently erected for Mr. August Mayer at a cost of \$2,250 complete. A very attractive design for a modern cottage of small dimensions. Perspective elevation and floor plans. Mr. John Winans, architect, Prohibition Park, Staten Island.
No. 5. "Wyandank," the country residence of Lieut. Morton at Southampton, Long Island. A most excellent design in the Colonial style. Two perspective elevations and floor plans. Mr. James B. Lord, architect, New York City.
No. 6. A modern dwelling at Binghamton, N. Y., recently erected for Mr. William Mannis at a cost of \$3,000 complete. A good example of a suburban house. Two perspective elevations and floor plans. Messrs. T. Q. Lacey & Son, Binghamton, N. Y., architects.
No. 7. A Colonial residence at Ardmore, Pa., recently erected for Dr. Louis O. Lussore. Perspective elevation and floor plans. Messrs. Boyd & Boyd, architects, Philadelphia, Pa.
No. 8. A Colonial residence at Bensonhurst, Long Island, recently erected for Mr. Thomas A. Ritson. Two perspective elevations and floor plans. A handsome design. Architects, Messrs. Parfitt Brothers, Brooklyn, N. Y.
No. 9. A residence at West Chester, Pa., recently erected for Dr. S. Hagerty. Perspective elevation and floor plans. A design with many excellent features. Mr. Edward S. Paxson, architect, Philadelphia.
No. 10. A residence at Attleboro, Mass., erected for E. P. Claffin, Esq., at a cost of \$5,500 complete. An artistic and pleasing design. Messrs. George F. Barber & Company, architects, Knoxville, Tenn.
No. 11. Perspective and interior view of the Walhalla of Ratiebon on the Danube. A costly reproduction of the Parthenon at Athens. This temple was erected at a cost of about \$6,000,000, and is devoted entirely to the display of busts of distinguished Germans.
No. 12. Design for a "cozy corner."
No. 13. View of the library of Mr. Henry L. Hotchkiss, New Haven, Conn.
No. 14. Miscellaneous Contents: Fatalities to workmen.—Scaffolding.—Lime water in freezing weather.—How to make a cheap greenhouse.—Making floors warm.—Inexpensive country homes.—Improved sash lock, illustrated.—An improved door hanger, illustrated.—A novel wood working machine, illustrated.—Gray bricks.—Dixon's silica graphite paint.—A convenient gage for carpenters and builders, illustrated.

The Scientific American Building Edition is issued monthly. \$2.50 a year. Single copies, 25 cents. Thirty-two large quartpages, forming a large and splendid MAGAZINE OF ARCHITECTURE, richly adorned with elegant plates and fine engravings, illustrating the most interesting examples of Modern Architectural Construction and allied subjects. All who contemplate building, or improving homes or structures of any kind, have in this handsome work an almost endless series of the latest and best examples from which to make selections, thus saving time and money.

The Fullness, Richness, Cheapness and Convenience of this work have won for it the LARGEST CIRCULATION of any Architectural Publication in the world. Sold by all newdealers. MUNN & CO., PUBLISHERS, 361 Broadway, New York.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

- Marine Iron Works. Chicago. Catalogue free.
For hoisting engines. J. S. Mundy, Newark, N. J.
"U. S." Metal Polish. Indianapolis. Samples free.
Yankee Notions. Waterbury Button Co., Waterbury, Ct.
Handle & Spoke Mch'y. Ober Lathe Co., Chagrin Falls, O.
Improved Bicycle Machinery of every description. The Garvin Machine Co., Spring and Varick Sts., N. Y.
Concrete Houses—cheaper than brick, superior to stone. "Ransome," 757 Monadnock Block, Chicago.
For static machines for all purposes, and X ray apparatus, write Reedsburg Electric Mfg. Co., Reedsburg, Wis., U. S. A.
The Norwich Line—Inside route between New York, Boston, and Worcester. Leave Pier 40, North River, 5:30 P. M., week days only.
Machinery manufacturers, attention! Concrete and mortar mixing mills. Exclusive rights for sale. "Ransome," 757 Monadnock Block, Chicago.
The celebrated "Hornsby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Refrigerating Machine Company. Foot of East 138th Street, New York.
The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4. Munn & Co., publishers, 361 Broadway, N. Y.
Send for new and complete catalogue of Scientific and other books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication.
References to former articles or answers should give date of paper and page or number of question.
Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all either by letter or in this department, each must take his turn.
Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.
Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.
Scientific American Supplements referred to may be had at the office. Price 10 cents each.
Books referred to promptly supplied on receipt of price.
Minerals sent for examination should be distinctly marked or labeled.

(7179) W. D. M. says: Is shellac considered a good bicycle wood rim cement? If so, how is it prepared for that purpose? Also, how should it be applied? A. Cement to Tires.—

- 1. Shellac..... 2 oz. av.
Gutta percha..... 2 " "
Red lead..... 90 gr.
Sulphur..... 90 "
Melt the shellac and gutta percha, and add, with constant stirring, the red lead and sulphur melted. Use while hot.
2. Isinglass..... 1/2 oz. av.
Gutta percha..... 1/2 " "
Caoutchouc..... 1 " "
Carbon bisulphide..... 4 fl. oz.
Mix and dissolve.
3. Caoutchouc..... 2 oz. av.
Resin..... 140 gr.
Shellac..... 100 "
Carbon disulphide, a sufficient quantity to dissolve the other ingredients.
4. Crude rubber..... 1/2 oz.
Carbon disulphide..... 4 "
Macerate twenty-four hours, and then add a solution of—
Resin..... 1 oz.
Beeswax..... 1/4 "
Carbon disulphide..... 4 "

(7180) G. R. S. says: Will you kindly inform me through your Notes and Queries of a cleaner and polish for tan shoes that will not injure the leather? A. We have published directions for making preparations for cleaning and polishing shoes, in our SUPPLEMENT, Nos. 1063, 1073, 1078, ten cents each.

(7181) J. C. McK. writes: I have been constructing an induction coil along the following lines and would be pleased to have your opinion as to the spark we might reasonably expect from the same. Length of coil inside heads will be a little over 13 inches. Three sections of 4 inches each. Size of coil when finished, 7 inches. Size of core, 1 1/2 inch. Wire on primary, No. 16, two layers. Wire on secondary, No. 38, 100 layers approximately. Winding, 116 to inch. No. 200 thread (cotton) between, making it a solid mass. Amount of wire on secondary, 5 pounds. Insulation between layers is two thicknesses of finely paraffined paper. The winding is very nearly perfect. We have one pound of wire on now, and a 10,000 ohm magnet, will not ring through it, although some current passes. As No. 38 wire has a resistance of a little over 10,000 ohms to the pound, the insulating must be very near perfect. We get quite a good shock by using a 10 volt battery, but it would seem to us that we ought to get more from No. 1 wire. We have no core, and no condenser, simply trying the coil in the winding apparatus. A. Your coil should give at the longest a 4 inch to 6 inch spark from its dimensions, though in a six inch coil as large a number of sections as eight are used in the secondary. The induced current would be very weak without condenser and core. Should say you would better have used No. 12 copper wire cot-

ton covered in two layers of primary, but additional current can be used to overcome your larger resistance. In doing so more heat will of course be developed, and the coil cannot be run as long at a time. With an odd number of sections in secondary, one end of the wire will come out on inside of spool. An even number of spools should have been used. The larger the number of sections, the less the risk of breaking down the insulation between the turns of secondary, because there is less difference of potential between adjacent parts of the coil.

(7182) R. E. R. writes: I have made the caustic potash battery you describe in "Experimental Science." I used a cast iron kettle for the cell after heating the water. I added the potash (3/4 pound), which was in stick form, and after this was thoroughly dissolved I put in a pound of black oxide. The sheet zinc is three feet long and six inches wide, rolled in spiral shape. The inside of kettle seemed to corrode to a considerable thickness. Can you account for it? Would not a copper pall be a good substitute for the kettle? A. The cell with oxide of copper in an iron dish, and a solution of caustic potash or soda, must have a thin layer of heavy petroleum oil on the top of the liquid to prevent the action of the carbonic acid of the air upon the potash or soda. You do not mention using this. In the action of the cell a dark brown or nearly black mud is formed from the black oxide. This may be what you have thought to be the corrosion of the kettle. If the kettle corrodes, it will be seen by the formation of holes or pits in the iron. This should not take place. The zinc of this battery, for best effect, should be amalgamated. This is difficult with ordinary sheet zinc; probably impossible with so large a piece as you use. This battery is properly to be used on closed circuit; that is, it should be left with current flowing through large resistance when you are not at work with it. From your description it is difficult to see why you have had a complete failure. The suggestions above may lead you to better success. A copper pall would be more expensive. If you would use copper, we would advise a dish bent up from sheet copper to hold the black oxide. This set into a glass jar would form a good negative plate. Rivet an insulated copper wire to the copper dish, so that neither the liquid nor the zinc can touch the wire on its way out. Then, if you can get a plate of zinc such as is used in the gravity battery and amalgamate it, the result will be much better.

TO INVENTORS.

An experience of nearly fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

JULY 20, 1897,

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

- Acetanillid, manufacturing, F. W. A. Frerichs..... 586,551
Adjustable spring, J. Wichmann..... 586,645
Air car, A. Brodbeck..... 586,589
Air compressor, A. Sheehan..... 586,629
Air cooling apparatus, A. S. Haslam..... 586,796
Alarm. See Gas alarm.
A malgam washing apparatus, H. C. F. Stormer..... 586,635
Ammonia, purifying, F. W. A. Frerichs..... 586,960
Amusement apparatus, W. Wharton, Jr..... 586,715
Annealing furnace, J. Timms..... 586,833
Arch center, G. A. Schillingler..... 586,870
Ashes, device for handling locomotive, Wallis & Stratton..... 586,581
Axle lubricator, car, J. S. Patten..... 586,594
Back support, J. Strech..... 586,674
Bag. See Mail bag. Water bag.
Bag lock, H. S. Gaskill..... 586,792
Bait, artificial, H. R. Osborn..... 586,620
Bale tie, Edinger & Crane..... 586,682
Bale tie, adjustable, P. K. Dederick..... 586,838
Baling press, roller, J. F. Swinnerton..... 586,574
Bar. See Bicycle handle bar. Car draw bar. Rail splice bar.
Battery plates, active material for secondary S. A. Rosenthal..... 586,627
Bearing, ball, W. Hoag..... 586,789
Bearing, ball, G. Wood..... 586,921
Bed pan, C. V. Northies..... 586,749
Bedstead, W. S. Foster..... 586,550
Bedstead lock, G. H. Cline..... 586,948
Bell, bicycle, H. G. Martin..... 586,954
Bicycle, E. Dederick..... 586,596
Bicycle, F. W. Mallett..... 586,611
Bicycle attachment, W. C. Burbank..... 586,531
Bicycle frame, A. F. Temple..... 586,639
Bicycle handle attachment, J. Godfrey..... 586,897
Bicycle handle bar, J. G. Walsh..... 586,678
Bicycle handle or grip, G. W. Williams..... 586,630
Bicycle holder, G. W. Douglas..... 586,881
Bicycle pedal, W. C. Roberts..... 586,829
Bicycle pedal, C. F. Lancaster..... 586,608
Bicycle stand, La Barre & Hill..... 586,741
Bicycle support, W. Hayball, Jr..... 586,817
Bicycle support, J. E. Norelius..... 586,619
Bicycle support, folding, Hunter & Pendleton..... 586,902
Bicycle support, pedal, W. J. Simonis..... 586,829
Bicycle, water, C. L. Knepper..... 586,851
Block. See Printer's block.
Blotter, revolving, G. S. Foster..... 586,815
Boats, device for launching life or other, G. W. Beebe..... 586,927
Boiler. See Steam boiler.
Boiler, W. Radcliff..... 586,934
Boilers, apparatus for removing sediment from steam, J. Watt..... 586,805
Bolt lock for communicating doors, W. H. Taylor..... 586,675
Bolt and carbon sheet holder therefor, manifold memorandum, F. M. Turek..... 586,640
Bookbinding, T. C. Kenworthy..... 586,604
Book, cashier's and salesman's check, C. I. Lozano..... 586,925
Boring or drilling machine with means for driving rods, bars or tubes into holes drilled, combined multiple, V. G. Jesty..... 586,603
Bottle filling machine, T. Roberts..... 586,747
Bottle locker, automatic, J. J. Reifgraber..... 586,836
Bottle, non-refillable, T. E. Worthington..... 586,719
Bottles, machine for feeding stoppers automatically to, N. Muslar..... 586,613
Bottles or other vessels with gases by means of capsules or containers charged with liquefied or compressed gases, apparatus for charging, E. Sterne..... 586,632
Bow, H. C. Peters..... 586,713
Box. See Cardboard box. Folding box. Knock-down box. Match box.
Bracket. See Shoulder brace.
Bracket, A. Taubert..... 586,881
Brake. See Car brake. Sewing machine brake.
Brake mechanism, fluid pressure, O. B. Mosher..... 586,561
Breechloaders, limiting and retaining device for operating bars of, W. Mason..... 586,656
Bridle, M. Wilson..... 586,648
Brush and mop holder, combined scrubbing, F. E. Matthews..... 586,857
Buckle, L. D. Rank..... 586,746
Buckle, marine, G. F. Wolff..... 586,679
Building construction, W. H. & F. A. Winslow..... 586,941
Burner. See Gas burner.
Button making machine, S. Menkin..... 586,821
Cable mechanism, secondary, J. T. & W. J. Hunter..... 586,901
Cables, elevator, P. Frederick..... 586,708
Can. See Oil can.
Can opener, W. A. Simond..... 586,874
Canister, combination, A. E. Carter..... 586,758
Capsules, apparatus for filling and closing metal, E. Sterne..... 586,633
Carbide, W. L. & Z. M. Hibbard..... 586,861
Car draw bar, railway, W. T. Van Doru..... 586,701
Car, hand, I. N. Glover..... 586,601
Car loading apparatus, C. W. Underwood..... 586,641
Car sign, street, G. E. Weis..... 586,583
Car ventilation, H. F. Stanley..... 586,839
Cars, air bray for railway, J. P. Coffin..... 586,538
Carbide apparatus, liquid, S. Twitchell..... 586,577
Cardboard box, H. Schmeer..... 586,827
Carpet stretcher, Gurney & Larned..... 586,659
Carriage and wheel chair, combined baby, J. A. Crandall..... 586,760
Case. See Saddle. Spectacle case.
Casein, making ammoniacal, W. Majert..... 586,854
Cement sidewalk, W. P. Beckwith..... 586,540
Chain adjusting device, F. J. Osmond..... 586,912
Chair. See Reclining chair. Rocking chair.
Chair and foot rest, combination, C. A. Lee..... 586,610
Churn, A. Mearns..... 586,936
Churn, C. L. Monroe..... 586,731
Churn dasher, P. C. Barlow..... 586,754
Cigarette machine, F. Girard..... 586,589
Cistern cover lock, H. Oberjohann..... 586,800
Cistern attachment, F. Zimmerly..... 586,661
Cleaner. See Grain cleaner.
Clothes from boiling water, device for removing, W. Krause..... 586,607
Clutch, friction, Bardons & Oliver..... 586,832
Clutch, friction, J. E. Windle..... 586,784
Clutch mechanism, traction engine, E. Huber..... 586,664
Cock, stop and waste, J. H. Lyons..... 586,710
Cotton elevator and cleaner, seed, G. Lemoine..... 586,926
Cotton gin feeder, T. F. Marlow..... 586,778
Cotton, printing and mercerizing, J. Weis..... 586,750
Crate, egg, J. H. Hammer..... 586,745
Crate, folding, egg, T. Ellenbecker..... 586,826
Crate, folding, egg, J. Goldbaum..... 586,843
Crate machine, J. B. Whites..... 586,671
Cultivator, F. Benfield..... 586,855
Current recorder, excessive, J. R. Cravath..... 586,723
Curtain fixture, A. J. Roth..... 586,935
Cutoff, rainwater, E. E. Snyder..... 586,572
Cutoff, fusible, Perkins & Tregoning..... 586,576
Cutter. See Paper cutter.
Cycle chains, adjusting means for, Roberts & Morton..... 586,624
Cycle gear cases, apparatus for manufacturing, H. W. Dover..... 586,840
Cycle wheel, D. N. Gleason..... 586,800
Dagger, J. E. Deane..... 586,671
Deborning implement, G. Webster..... 586,806
Dental instrument, J. W. Hard..... 586,727
Die. See Glove cutting die.
Dilatator, uterine, T. A. Lewis..... 586,776
Drafting tool, E. H. Rooney..... 586,626
Dust collector, W. W. Marmon..... 586,742
Dust pan, A. L. Vuillier..... 586,919
Dyeing black, E. Von Portheim..... 586,865
Elastic wheel, J. H. Peterson..... 586,566
Electric furnace, R. F. S. Heath..... 586,686
Electric furnace, F. J. Patten..... 586,824
Electric heater, J. McElroy..... 586,815
Electric meter, Marks & Green..... 586,580
Electric motor, F. A. Perret..... 586,825
Electric switch, J. F. McElroy..... 586,933
Electric switch connection, H. A. Bullard..... 586,543
Electrical conducting wires, connector for, Hull & Du Bois..... 586,665
Electrical conductor, C. N. Dutton..... 586,811
Electrical meter, W. D. Marks..... 586,556
Electrodepositing device, J. Bossard..... 586,894
Electrolysis, method of and apparatus for effecting, C. Kellner..... 586,729
Elevator, electric motor, F. J. Patten..... 586,823
Elevator. See Cotton elevator.
Elevator clutch and brake, W. Weismantel..... 586,885
Elliptic spring, T. G. Mandt..... 586,777
Embroidery hoop, C. S. Bucklin..... 586,947
