THE CIVIL SERVICE GUIDE. By L. M. Bryan. New York: Dick & Fitzgerald. Pp. 112. Price \$1.

A manual for applicants for government positions under the United States civil service examinations is here presented in revised form. It contains rules, specimen examination questions, requirements of applicants, salaries, etc., with full instructions for applicants for positions in all branches of the classified civil service of the United States, including the government printing department, the post office, custom house, and internal revenue service, as well as the departmental business and the non-classified consular service. It cannot fail to be useful to intending applicants for positions.

The Superior Drill Company of Springfield, O., make of a neatly bound pocket memorandum book, with celluloid title and calendar, an appropriate advertisement of their business.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn. Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(7187) G. T. M. writes: I would like to have information on melting gold. I melted some in a crucible, and all the gold went through the bottom and left a hard ball that looked like iron. When I went to look for the gold, I could find none. Will you inform me how to prevent the same? A. Mr. C. A. B. says: We advise your correspondent to start with sound crucible. Use saltpeter and borax with gold in melting and have a strong fire.

(7188) G. R. B. writes: As I intend to make the small eight light dynamo described in SCIENTIFIC AMERICAN SUPPLEMENT, No. 600, but wish to use it as a regular shunt wound machine, could you kindly let me know what gage wire I should use on the fields and armature, and about how much? I should like to get the same voltage and amperage; perhaps greater amperage, if possible. I should like to put one length of wire on the fields, instead of in sections. A. Use No. 16 American wire gage in the armature, with 10 turns in each coil, making a total of 480 conductors in the armature. Same sized frame as original. Use No. 20 A. W. gage in the field. On each field wind 1,200 turns, making a total of 2,400 turns. This gives about one ampere more than the original design. A field regulator or outside resistance should be used containing about 10 ohms.

TO INVENTORS.

An experience of nearly fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.
