

CIGARETTES AND SCIENCE.

BY JOHN WALLACE

The recent papers on "The Cigarette Question," read before the Medico-Legal Society of New York, deserve more than passing notice.

To those accustomed to the methods of science and of scientific modes of thought, it is axiomatic that investigation and demonstration must always be conditions precedent to accurate and defensible conclusions.

In the mind of the average layman this is obviously not the case, as a brief resumé of "The Cigarette Question" will show.

Here are the facts. An article of commerce called a "cigarette" is placed on the market to the extent of 4,000,000,000 annually.

(A) It contains, either in the fillers or in the paper wrappers, opium, morphine, jimson weed, belladonna, glycerine, sugar, arsenic, phosphorus, chlorine, copper, creosote, saltpeter, valerian, cannabis indica, cocaine and other "appetite kindling drugs."

(B) It produces insanity. (This statement appears in petition to Congress; in the tract cited above; and in the headlines of journals throughout the country.)

No more serious accusations than these could be made against any commodity purchasable in the open market. If true, the fact that a single cigarette may be bought without the criminal prosecution of both manufacturer and retailer is evidence of appalling laxity on the part of public officials; if false, the fact that such opinions find lodgment in otherwise intelligent minds is evidence of appalling indolence and ignorance.

It is so simple to ascertain the truth. Investigate the ingredients by means or chemistry as to (A) and obtain the verdict of insanity experts of repute and experience as to (B). The conclusion must be in accordance with the verdicts rendered by these two classes of scientific experts, and cannot be gainsaid.

The Medico Legal Society did this. In November, W. H. Garrison read "A Brief for the Cigarette," and at the February meeting Clark Bell, secretary of the society, read a paper on "The Cigarette Question."

Mr. Garrison in his paper quoted eminent analysts of this country and of Europe to show that no trace of anything except pure tobacco and pure paper entered into the composition of American cigarettes. The verdict of these chemists was unanimous and therefore conclusive.

Mr. Bell, as a part of his contribution to the literature of this subject, read letter after letter from neurologists, alienists and superintendents of insane asylums, to the effect that cigarettes had never caused insanity.

Following Mr. Garrison's paper, The New York Sun printed an extended report of the paper, under the caption "Cigarettes Defended." Mr. Bell's paper was reported in The New York Tribune, with the headline "Cigarettes 'Not Guilty.'"

In these headlines lies the lesson. The lay mind had so entirely absorbed the idea of the noxiousness of the cigarette that the scientific results, so easily obtainable at any time, were actually "news," and dignified by headings such as would be used to announce the important discovery of something new to science.

The age is proud of calling itself "scientific," but while opinions so wholly erroneous may be commonly held to such an extent that the bare announcement of their absurdity is held to be "news" worth printing, we are a long way from justifying ourselves in the application of the word "scientific" in any real sense of the word.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

- Marine Iron Works. Chicago. Catalogue free.
For hoisting engines. J. S. Mundy, Newark, N. J.

NEW BOOKS, ETC.

L'ANNEE INDUSTRIELLE. Paris: Juven & Company, 1897. Pp. 330. 12mo Price 75 cents.

The progress in the year 1897 is supposed to be summed up in the present volume, which will probably prove of some value to those who take a popular rather than professional interest in the engineering and scientific progress of the year. Many of the illustrations are perfect caricatures and give an entirely wrong opinion of affairs, specially as regards America. The illustrations on pages 4 and 73 are ridiculous. A large number of the illustra-

tions have no reference whatever to the year which has passed. We are glad to see that the articles taken from foreign sources are in the main properly credited. This is a point upon which our transatlantic brethren seem to have little conscience.

The first two numbers of The Journal of Applied Microscopy have appeared. It is published by the Bausch & Lomb Optical Company, of Rochester. It cannot, however, be considered in any sense a trade publication. For a long time there has been room for a new journal of microscopy on rather different lines than those already in the field. So we are glad to welcome the advent of the new journal, which will certainly prove very useful. Great attention will be given to microscopical instruments and technique viewed from a practical standpoint. The February number contains a splendidly illustrated article on the laboratories of microscopy, histology, bacteriology and pathology of Cornell University. It is edited by L. B. Elliott, and the subscription price is \$1 per annum.

In the Marine Review, of Cleveland, Ohio, of recent date, is an annual report of shipbuilding in all parts of the United States. It is a handsome double number with two coated paper supplements giving portraits of the officers of the society, naval architects and marine engineers and shipbuilders. This special number is mailed on receipt of twenty cents by the publishers.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(7372) W. H. H. says: Will you be kind enough to give me a receipt for the wax used by laundrymen on their irons? They also put some of it in their starch. A Glossed Shirt Bosoms—Take 2 ounces of fine white gum arabic powder, put it in a pitcher and pour on a pint or more of water, and then, having covered it, let it stand all night. In the morning, pour it carefully from the dregs into a clean bottle, cork and keep it for use. A teaspoonful of gum water stirred in a pint of starch, made in the usual way, will give to lawns, white or printed, a look of newness, when nothing else can restore them, after they have been washed. Or, melt 2 1/2 pounds of the very best A1 paraffin wax over a slow fire. When liquefied, remove from the fire and stir in 100 drops oil of citronella. Have some new round pie tins; place them on a level table, coat them slightly with sweet oil, and pour about six table-spoonfuls of the enamel into each tin. The pan may be floated in water to cool the contents sufficiently to permit the mixture to be cut or stamped out with a tin cutter into small cakes about the size of a peppermint lozenge. Two of these cakes added to each pint of starch will cause the smoothing iron to impart the finest possible finish to muslin or linen, besides perfuming the clothes.

(7373) L. G. S. asks: 1. About how many volts is required to run a 1/4 horse power motor? A. Motors to run upon lighting or power circuits must be wound for the voltage of these circuits, usually 52, 115, 230, 500 thereabout. A 1/4 horse power is in round numbers about 200 watts, and the motor would use at each of the voltages named above as many amperes as the quotient obtained by dividing 200 by the voltage. 2. Would a 1/4 horse power motor be capable of turning any machine that a man can turn by hand? A. Yes, for all day long. No, for a brief period. Rankine gives figures which show that a man will exert about one-tenth horse power working on a crank for 8 hours per day and about 1/2 horse power for a minute or two. 3. Is there any way to measure the horse power of a motor or engine other than with special instruments? And if so, how is it done? A. The power of a motor is derived from the watts of electricity used as above. These are measured by a wattmeter; 746 watts are 1 electrical horse power. The watts may be calculated from volts and amperes. They are the product of the volts by the amperes used. These are measured by special instruments. You cannot measure electricity without proper measures any more than you can measure a string without a yard stick or graduated rule.

(7374) F. M. C. asks: 1. What is the practical difference between a dynamo and a motor? A. The differences are such as to fit the motor for the space it is to occupy, to keep out grit and to keep in the magnetic flux, etc. There is usually no attention paid to ornamentation or polished parts in the motor. There are many such practical differences. 2. Can one be used for both without any alteration? A. Yes, electrically. 3. What would result if the change were made with the armature at full speed. A. It would run right on without any apparent difference, if the poles were the same in the motor as they had been in the dynamo. 4. Where can information be had as to what has been done (or attempted) to save the power wasted in stopping street cars (modern electric)? A. We have not at hand the information desired. 5. What is the percentage of loss in the above? A. As much as would bring the car from rest up to the same speed again. We do not know what it is a percentage of, and hence cannot tell what percent it is.

(7375) M. J. M. writes: Having carefully read your valuable articles on acetylene gas in your

SUPPLEMENT and SCIENTIFIC AMERICAN. I write for information regarding the closing sentence of the resume of "Explosions," in the February 5th issue of the latter paper, viz: "Acetone as a solvent has not yet received sufficient application to judge of its possibilities." Pleading ignorance, I would ask how acetone enters into the case? Does acetylene gas condense in the service pipes and chandeliers and form an explosive compound? Before the gas enters, the pipes and chandeliers are, of course, filled with air. Is there any danger of an explosion if the initial gas is lighted before it has had time to drive out all the air? I have never heard of such an accident either with common or with acetylene gas, but would like your opinion in the matter. A. Claude and Hess found that at ordinary temperatures and pressures acetone dissolved 25 times its volume of acetylene and at 12 atmospheres pressure (185 pounds per square inch) 300 times its volume. Further, that with a rise of temperature, the increase in pressure is due to the tension of acetylene itself, according to Berthelot and Vieille, although acetone boils at 127.4° Fah. The solvent power of acetone was also found nearly proportional to the increased pressure. The following table will give a few interesting details:

Table with 3 columns: Percentage of acetylene in the acetone, Temperature Fahrenheit Degrees, Pressure, pounds per square inch. Data points: 22% at 59°F (100 psi) and 167°F (280 psi); 37% at 59°F (177 psi) and 140°F (400 psi); 64% at 59°F (280 psi) and 131°F (472 psi).

Liquefied acetylene, which possesses marked advantages in transportation and using, requires reservoirs of such great thickness and strength by reason of its high pressure that the dangers from it are equal to those from liquid ammonia or carbonic acid gas. To reduce the thickness of these cylinders and render them more safe by using lower pressures, and still have liquid contents, acetone was proposed. In this country it has been experimented with, but is not handled commercially; it has, however, been found practicable, outside of a few minor inconveniences. However, if such flasks are submitted to high temperatures, they are liable to explosion; for, although the acetylene is in solution, as soon as the pressure is released it is set free comparatively pure and free from acetone. In using, the flask is simply attached to the service pipes, provided with a pressure regulator and used until the pressure falls to outside pressure. Acetylene is a true gas and, like all fixed gases, tends to fill completely the space confining it. It is nearly the same weight as air and does not stratify or segregate in a holder. It does not condense below about 68 atmospheres pressure. It is supposed to unite with copper (in the presence of ammonia only) and form an explosive compound, although experiments have not verified the fear that such formations are dangerous. It is thought safe even to use pipes or burners made of copper or brass, having no real evidence to the contrary. The answer to the next question is found in practice. When a set of burners are turned off at the main pipe, the gas gradually leaks out through the burner into the room, and is replaced partly by air. Now, when the gas is first turned on it will not ignite for an instant, until the acetylene gets to the burner; we have never heard of an explosion from this cause. Le Chatelier says that a flame will not strike back through a tube 0.02 inch diameter, but may through one 0.04 inch in diameter. A burner for acetylene has an orifice of 0.015 inch diameter; so that the safety is ample on that score. As it can be used in a Bunsen burner, with small burner tube, without striking back, it is evident that the danger of this happening with burners such as the Naphys or Bray is very minute indeed.

TO INVENTORS

An experience of nearly fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequalled facilities for procuring patents everywhere. A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Granted

MARCH 1, 1898,

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

Table listing inventions and their patent numbers. Includes items like Accumulator plate, W. Majert (599,718); Adding machine, A. L. Platt (599,730); Alarm, See Burglar alarm (599,730); Automatic switch, M. N. Shuffelbarger (599,808); Axle journal box, car, Lewis & Godwin (599,944); Bar fastener, M. E. McCoy (599,836); Baling press, H. D. Coleman (599,685); Basin clamp, T. W. Conolly (599,687); Basin holder, wash, T. S. Heinkeken (599,706); Bath cabinet, L. Wildermuth (599,933); Bearing, vehicle ball, W. S. Robinson (599,896); Bed bottom, J. B. Ryan (599,735); Bed, convertible, K. L. Stenhouse (599,921); Bell, bicycle, L. A. Sanford (599,988); Belt, H. D. Captain (599,683); Belt, concentrating, W. F. Bowers (599,826); Belts, manufacture of leather, E. F. Sarkeant (599,839); Bench, See Vise bench (599,903); Bicycle, H. Busse (599,001); Bicycle, C. H. Harris (599,001); Bicycle, W. B. Sparks (599,046); Bicycle, W. H. Sparks (599,046); Bicycle brake, E. E. Robinson (599,045); Bicycle chain disk or cam, H. Ljungstrom (599,851); Bicycle chain guard, F. H. White (599,820); Bicycle gear casing, C. H. Willis (599,884); Bicycle handle bar, R. P. Phil (599,793); Bicycle luggage carrier, M. J. Ward (599,750); Bicycle rack, coin or check controlled, W. T. Summers (599,068); Bicycle saddle, A. E. Peck (599,729); Bicycle support, J. P. Hobart (599,964); Bicycle tandem attachment, E. C. McFadden (599,859); Block, See Building block (599,778); Blower, N. E. Funk (599,778); Board, See Ironing board (599,811); Boiler, See Steam boiler (599,825); Boiler due cleaner, rotary, R. G. Bidwell (599,773); Boot or shoe stretcher, C. C. Thompson (599,951); Boring drill, J. Nitschmann (599,914); Bottle, Chaplen & Mills (599,064);

Table listing inventions and their patent numbers. Includes items like Bottle, L. Kievit (599,711); Bottle, J. P. Redding, Jr. (599,916); Bottle, Young & Godley (599,108); Bottle closure, J. H. Wittke (599,896); Bottle locking device, S. Adler (599,055); Bottle, non-refillable, D. Myers (599,972); Bottle spout attachment, W. S. How (599,784); Bow, W. E. Stoddard (599,747); Box, See Pull box (599,711); Brake, See Bicycle brake (599,711); Broom, J. Good (599,124); Broom holder, H. L. Steinmeyer (599,744); Brooms, etc., device for holding, H. F. Ford (599,982); Brush, W. Wallach (599,816); Buckle, W. J. Fleming (599,935); Building block, J. W. Rapp (599,884); Bung, self-acting, P. C. Leditch (599,738); Burglar alarm, E. A. Goepfer (599,008); Burner, See Gas burner (599,711); Button making machine, F. D. Foster (599,696); Button, separable, E. Pringle (599,114); Cabinet for clothes, lines and pins, F. S. Devereaux (599,711); Cable road sleeper, J. Campbell (599,060); Callipers, F. A. Thompson (599,499); Can loading machine, E. W. Wiley, Jr. (599,754); Canopy, insect, N. V. Stearns (599,874); Cans, etc., device for handling, A. Jensen (599,004); Car brake, F. G. Koehler (599,081); Car coupling, G. K. Hamfeldt (599,909); Car coupling, R. G. Hardesty (599,501); Car coupling, G. W. Preston (599,987); Car coupling, C. F. Springer (599,977); Car coupling, automatic safety, Turk & Harris (599,883); Car coupling knuckles, device for opening, G. K. Hamfeldt (599,900); Car fender, F. S. Duvigne (599,770); Car fender, J. W. Sussman (599,069); Car fender, trolley, O. Speckenbach (599,932); Car, locomotive hand, J. McGeeze & Harris (599,912); Cars, pneumatic controlling mechanism for electric railway, S. H. Short (599,807); Carpet stretcher, J. D. Wilcher (599,129); Carriage seat, S. H. Bailey (599,823); Carriage top prop joint, H. D. Potter (599,089); Cart body, A. B. Black (599,826); Cart for military or other purposes, H. A. D. Maclean (599,969); Case, See Surgical instrument case (599,711); Case and cigar tip cutter, combined, W. A. Holgate (599,707); Cash register, E. Runge (599,734); Cash register, H. G. Walter (599,817); Catamenial sack and womb supporter, S. Beach (599,955); Ceiling or wall construction, J. S. Merritt (599,721); Centrifugal machine, J. Naylor, Jr. (599,725); Centrifugal resistance controlling device, G. H. Whittingham (599,051); Chain and sprocket wheel for driving bicycles, etc., A. W. Menk (599,970); Chain coupling link or ring, I. B. Brooks (599,927); Check or other negotiable instrument, W. H. Howard (599,811); Check or similar instrument, W. H. Howard (599,812); Check slip, S. Shoup (599,084); Checkrein holder, automatic, O. Gravelle (599,898); Chin support and eye closer for the dead, E. Raus (599,731); Chuck, lathe, J. C. Graham (599,961); Churn, G. E. Moser (599,723); Chute, coal, O. Crosby (599,735); Cigar tip cutter, S. Y. Tabb (599,878); Cigarette, J. O. Eaton (599,854); Clamp, See Basin clamp (599,711); Cleaner, See Presser flue cleaner (599,711); Clip, See Harrow tooth clip (599,711); Clothes drier, J. L. Siefkes (599,871); Clothes wringer, F. F. Keller (599,787); Clutch, friction, S. T. Johnson (599,966); Coffee or spice mill, C. C. Clawson (599,850); Collar, horse, J. Brundage (599,883); Computing machine, C. H. Weber (599,989); Conveyor, traveling, Foote & Dahl (599,896); Copy holder, J. A. Boehler (599,889); Copy holder, J. S. Dudley (599,772); Corks, method of and apparatus for saturating, J. Schmitz (599,788); Corn sheller, J. Q. Adams (599,759); Corundum cleaning machine, W. M. Hoffman (599,065); Cot, swinging, J. H. Benning (599,116); Couch or lounge, Pace & Carpenter (599,628); Counter irrigation instrument, W. H. Lockerby (599,714); Coupling, See Car coupling (599,711); Crane, folding, the Parsons (599,979); Current collecting device, L. Gutmann (599,751); Current motor, alternating, W. Stanley (599,810); Currents into direct currents, transformation of alternating, A. Muller (599,789); Curtain poles, rods, etc., support for, Kroder & Reubel (599,006); Curtain ring, A. R. Bishop (599,262); Curtain stretcher, J. J. Oliver (599,017); Cutter, See Cigar tip cutter (599,711); Cycle, A. Hansel (599,708); Cycle pedal, J. F. Farned, W. J. Farned (599,842); Damper, stove, Keep & Robinson (599,812); Depilatory, A. H. Stone (599,863); Derrick, E. R. Snamble (599,825); Display rack, J. M. Beckwith (599,925); Display rack, W. F. Scott (599,739); Door closer, automatic electric, C. E. Scribner (599,836); Drawer, C. P. Whittle (599,753); Drier, See Clothes drier (599,711); Drill, See Boring drill (599,711); Drinking tube, J. A. Clark (599,862); Drip trough, J. M. Caragher (599,004); Dynamo, induction, B. G. Lamme (599,942); Dynamo, electric, regulator for, W. H. Chapman (599,922); Easel support for albums, etc., W. A. Holman (599,902); Ejector, high and low pressure, J. Horsley (599,077); Electric circuit switch, Davis & Harder (599,930); Electric circuit switch, G. Wright (599,357); Electric conductor, flexible, J. F. Conroyville (599,165); Electric contact device, J. L. Buchanan (599,810); Electric machines, current collector for dynamo, G. W. Nell (599,088); Electric motor, E. McNeerney (599,913); Electric motor, O. H. & A. F. Pieper (599,791); Electric motor, non-synchronous, B. G. Lamme (599,940); Electric motor, method of and means for regulating, Frankfield & Jackson (599,872); Electric motors, method of and means for controlling, S. H. Short (599,804); Electric switch, G. Doyle (599,832); Electric switch, J. F. Flint (599,112); Electrical distribution system, B. G. Lamme (599,943); Electrical machine, direct current, B. G. Lamme (599,941); Elevator, B. F. Covel (599,768); Elevator, F. H. Richards (599,033); Elevator hatchway cover, H. B. Murdock (599,837); Elevator safety stop, E. X. Genoud (599,999); Engine, See Rotary engine (599,711); Engines, reversing mechanism for gas or other, B. W. Grist (599,779); Envelope, P. E. Gillette (599,960); Envelope or wrapper opener, F. E. Munn (599,724); Excavating apparatus, J. W. Adams (599,737); Excavator, J. F. Sumner (599,450); Eyelet, F. Kempshall (599,126); Eyelet punching machine, T. A. Perrins (599,020); Fare register, A. E. Nielsen (599,127); Feed water heater and purifier, T. Gunning (599,983); Feeder, automatic stock, D. A. Askew (599,456); Feeder, stock, J. C. Griffin (599,748); Feeding device, animal, G. W. Tallman (599,748); Fence machine attachment, wire, E. F. Shellabarger (599,976); Fender, See Car fender (599,711); Fertilizer distributor, W. T. Johnstone (599,079); Filter, J. F. Ziegler (599,675); Filter, water, H. Millgate (599,971); Filtering and separating oil from water, apparatus for, E. K. Meredith (599,720); Firearm peep sight, A. Weed (599,104); Firearm, recoil operated, Gahbett & Fairfax (599,069); Firearms, removably attaching magazines to, C. J. Elbert (599,825); Flower jar, S. D. Engle (599,096); Frame, See Picture frame (599,711); Furnace, G. D. Hoffman (599,963); Fuse lighter, J. F. Fisher (599,988); Face, See Presser flue cleaner (599,711); Game pieces, R. G. Clarke (599,167); Game table, C. Lufsky (599,096); Garment fastener, J. F. Gates (599,689); Garment hanger, J. F. Puerchtiger (599,777); Garment sleeping, W. Denton (599,963); Gas burner, incandescent, A. V. L. Smith (599,899); Gas light burner, incandescent, A. H. Peteren (599,879); Gear, driving, L. S. Crawford (599,689); Gearing, speed, J. R. Seefeld (599,870); Glass articles, cooling, W. F. Altenbaugh (599,887); Glass mould, J. W. Kuntzer (599,939); Glass, ornamented, E. J. Lutwyl (599,716); Glassware finishing machine, W. F. Altenbaugh (599,822); Gold, apparatus for recovering fine, E. L. Weed (599,786); Grain conveyor, K. Hurlman (599,872); Grass burning device, Slaughter & Christian (599,872); Gun box, chewing, F. H. Lunken (599,945); Gun attachment, attaching artificial, F. Fenor (599,934); Hammer, magazine magnetic tag, A. W. Savare (599,741); Hanger, See Garment hanger (599,711); Harrow tooth clip, J. I. Hoke (599,076); Head rest, Larrabee & Banks (599,850); Head screen, J. Conlisk (599,686);
