HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Ninerals sent for examination should be distinctly

price.

Ninerals sent for examination should be distinctly marked or labeled.

(7463) W. V. asks: 1. Can the same length of spark be obtained in the induction coil of Syre-PLEMENT, No. 160, by using No. 30 or 31 single cotton covered wire instead of No. 86? If not, what length will they give? A. No. If wound equally close, the spark will be about one quarter as long with No. 30 as with No. 36 wire. 2. What size will the tinfoil in the condense be? A. The size of the condenser is determined by the primary current and would not be changed whatever changes were made in the secondary winding. Cut the sheets of tinfoil to go into the box at base of coil, The proper surface of tinfoil is 40 square feet. 3. Do you have a SUPPLEMENT that tells you how to make a folding camera, size 4×5 or 5×7? What number is the SUPPLEMENT? A. For folding camera, see SUPPLE MENT, No. 1021. For mode of making bellows, see Sup-PLEMENT, No. 625. Other articles may be found in Sup-PLEMENTS, No. 806 and 1064, price 10 cents each by mail

(7464) S. E. writes: Please send me a SUPPLEMENT containing an article on the prevention of creeping salts in a salammoniac battery. A. We do not know any separate article on the checking of creeping of salts in battery jars. It is done by the following method: Take paraffine wax, 2 parts; vaseline, 1 part. Melt together. Clean and dry the cells. Dip the neck of the cell about an inch into the melted solution. By dipping obliquely and rolling the jar around, it will be coated on the inside as well as on the outside. Over this surface the salts will not creep.

(7465) W. G. R. asks: Have you any book or books giving a full explanation of differential arc light system? A. A valuable series of papers on the arc light appeared in the SCIENTIFIC AMERICAN SUPPLE-MENT, Nos. 1047-1052, also one on driving powers, equalizers, etc., in Supplement, Nos. 694, 695, 696, price ten centa each by mail.

TO INVENTORS,

An experience of fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad enable us to understand the laws and practice on both continents, and to possess unequaled facilities for procuring patents very whose A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business, Address MUNN & CO., office SCIENTIFIC AMERICAN, 361 Broadway, New York.

THE

Scientific American ARMY AND

COAST DEFENCE SUPPLEMENT.

10-Inch Gun on Disappearing Gun Carriage.

GUNS, ARMOR AND FORTI-FICATIONS.

In response to numerous requests for detailed information regarding our Coast Defences, we have just published a special edition of the SCIENTIFIC AMERICAN SUPPLEMENT under the above title as complementary to our recent "Navy" issue. It is similar in size, quality and general make-up to the Navy Supplement, and in it will be found the most important facts regarding our system of coast defence and the varied character of the "war material " upon which it depends.

Among the subjects treated are the following:

8, 10, 12 and 13 Inch guns.

Disappearing gun carriages as used in coast defences.

Rapid-fire guns, various types. Machine guns, such as Hotchkiss, Gatling, Colt, Maxim.

Armor; method of manufacture, tests, etc.

Projectiles, powders and guncotton; process of manufacture.

Range finders, submarine mines, etc.

Tables of size, power, penetration, etc., of the various guns.

Mortars, dynamite guns, submarine mines, small arms.

Diagrams showing flight of modern projectiles and penetrating power. Mountain guns and method of transportation by mule pack.

This issue opens with a brief discussion of the ex-

act and proper scope of a system of coast defence, in which it is shown that both army and navy are intimately associated in its planning and execution.

The descriptive matter commences with an account of the 12-inch coast defence guns and the methods of their construction, mounting and operation. Then in their order follow a series of chapters on heavy rapid-fire guns, light rapid-fire guns and machine guns, in which the leading types of each class are fully illustrated and described. The development of armor is described from the early wrought iron plate down to the re-forged face-hard ened Harvey plate of to-dav. Under the head of powders is an article on the manufacture of guncotton, and following this is a brief account of the much-talked-of smokeless powders. Dynamite guns are illustrated in several handsome cuts.

There is a very full chapter on the subject of harbor defence, including diagrams of the various systems of range-finders and the modern methods of defence by mortar-fire, submarine mines and dirigible torpedoes. Under the last head, the White-head, Howell, and Sims-Edison types of torpedo are shown in a series of cuts which will be entirely new to the public. A chapter on the small arms carried by the army, navy and volunteers is followed by tables of statistics of the guns in use in our own service and those of leading foreign powers.

The illustrations number over 100 and include a magnificent double page supplement of our largest battleship, the "Iowa."

The colored cover shows an illustration of a large coast defence gun in action.

PRICE, BY MAIL, 25 CENTS. MUNN & CO., Publishers, 361 Broadway, New York City.

J. A. FAY & CO. 10-30 John St., CINCINNATI, OHI PURIFY YOUR DRINKING WATE

Your Correspondence is Soli ited.

Illustrated Matter and Prices of application.

Pure water is as necessary as pure food or pure air. Impure water is the direct cause of many deadly diseases. The foulest water is made pure by the use of Watson's Natural Stone Filter. It thoroughly removes all dirt, germs, vegetable and animal matter, destroys the gaes and foul odor, and leaves the gaer pure, sparking and clear. E. Send for Catalogue and Price List.

N. A. WATSON, Manufacturer, ERIE, PA

THERE IS NO MYSTER'

in Nature's method of distilling water. She has simply set the example—but it is in the clouds. We have brought it to earth by our New Process Distillation.

THE RALSTON STILL turnishes water as p re as Nature can give it. And it does even better, because its system of reaerstion is mechanically perfect. The air is Sterilized and Purified, and the Dust and Poisonous Gases are Removed. Our best Still is only \$10.00. Illustrated Catalogue containing t stimontals and full description sent promptly upon application.
