

## RECENTLY PATENTED INVENTIONS.

## Bicycle-Appliances.

**SHAFT-BEARING.**—BYRON E. FOSS, Chicago, Ill. This bearing for crank-shafts comprises a casing open at one side and adjustable in diameter. Bearing rings are normally seated in the ends of the casing and are longitudinally open at one side. On the shaft are bearing-collars; and on opposite sides of the bearing-collars retaining-collars have their edges turned inwardly. These retaining-collars form the side walls of raceways in which balls roll. End caps for the casing also have raceways, one wall of each being turned toward the other. Balls also roll in the latter raceways.

**REST.**—ALEXANDER G. SHIELDS, L'Anse, Mich. The bicycle-rest comprises members adapted for attachment to a bicycle-frame, one of the members having outwardly-extending lugs with which legs are pivotally connected. Downwardly and outwardly inclined blocks between adjacent lugs govern the angle of the legs relatively to the bicycle. A member adapted to be secured to the bicycle-frame has clips to receive the legs when folded.

## Railway-Contrivances.

**SWITCH.**—CHARLES TROUP, Watsoka, Ill. The present invention is an improvement upon an operative mechanism for pivoted switch-rails, patented by the same inventor. With the fixed and switch rails a tripping device is connected, adapted to be acted on by car-wheels. A rod extends alongside the track and is connected with automatic mechanism for shifting the switch-rails. When a locomotive or car passes over the siding, traction is applied to the rod and hence to the automatic mechanism, whereby the switch-rails are thrown from their normal position into position for the siding.

**ADJUSTABLE SEAT.**—THOMAS B. MASON, Trenton, N. J. The object of the invention is to provide a seat for motormen. The seat consists of a standard universally mounted so as to have free movement in any direction and provided with a bicycle-saddle secured to a tubular post resting on a spring surrounding the standard so that there will be no jar. When it is necessary for the motorman to rise, the saddle will be carried up with it by the expansion of the spring. The saddle is adjustably secured in position by a clamp.

**COLLAPSIBLE SEAT AND HEAD-REST.**—HENRY S. KIDD and MICHAEL H. DEPUE, Washington, N. J. This invention provides a seat and a back for use on railway car seats, so as to provide a support for the head of a traveler. The seat and back are furnished with a pillow upon which the head may be reclined. The improved chair may be very compactly folded and placed in the casing or cover, so that the entire device may be conveniently carried in a valise or hand-satchel. The chair can also be used on the sea-shore.

## Miscellaneous Inventions.

**ELECTROMEDICAL APPLIANCE.**—JOHN E. FREEMAN, Beard, Ky. The appliance has a belt with a non-conducting front and back portion. Electrodes are located on the outside of the belt, and have fastenings extending into the space between the front and back portions of the belt. A wire is located between these portions of the belt and electrically connects the electrodes. The fastenings of one electrode extend through the belt to the outside in order to form a means for connecting the belt with a source of electricity.

**ARTIFICIAL BAIT.**—EDWARD T. DUKES, Quitman, Ga. This inventor has provided an improvement in artificial bait which, when drawn through the water, will move like a minnow. The bait has a body composed of a thin plate of aluminium resembling a minnow and twisted spirally to insure its rapid rotation when drawn quickly through the water. Fin-like projections are provided to aid as propellers in securing the desired rotation. The hooks are arranged in pairs on each side of the axial line and are so attached as to offer the least resistance to the rotation of the bait-body and to be readily removed and replaced.

**HYDRAULIC-DREDGE.**—PETER KIRK, Kirkland, Wash. This machine for dredging gold-bearing sands and gravel covered by water comprises a vertical rotary mast and two horizontal supporting arms. A vertical hydraulic pipe is adjustably mounted on the upper arm and passes through the lower arm. The pipe has inner and outer tubes with a bearing-head at its lower end. On the lower arm a turning mechanism for the hydraulic pipe is mounted. At the upper end of the hydraulic pipe is a receiver provided with pipes for carrying away the sand and gravel. There are no valves and working parts; and the machine carries the full power of suction and force to any depth required.

**SASH-LOCK.**—GEORGE E. and LOWELL PARKER, Newark, N. J. The present invention provides an improvement in locks for securing upper and lower sashes together, so that they cannot be raised or lowered without first freeing the lock. The locking mechanism is inclosed within a casing having bearings for two locking-bolts which cross each other at right angles. One of the bolts is adapted to enter a recess or hole within one of the sashes and the other bolt is adapted to enter recesses or holes in the window-casing. These two bolts are each provided with a central yoke or crank, which cranks mutually engage with each other, so that one bolt may be reciprocated by turning the other.

**DETACHABLE CONNECTION FOR ELECTRIC FIXTURES.**—STACY G. READ, Bridgeport, Conn. On the stage it is often a matter of importance quickly to change the incandescent lamps, in which operation the usual screw and socket are too inconvenient. In the present invention a fixed base is used having two parallel grooves. Two metal plates connected with the feed-wires are secured to the face of the base outside the grooves and project over the major part of their width. A socket-base has two projecting L-shaped arms in electrical connection with the conductors of the fixture, which arms enter the grooves and engage the plates so that the fixture can be quickly slid into and out of place.

**HARNES-BUCKLE.**—JAMES A. GAVITT, Waitsburg, Wash. The harness-buckle provided by this inventor is especially adapted for use as a trace-buckle, but can be used equally well upon light or heavy har-

ness. The construction is such that the buckle can be cheaply manufactured and can be readily manipulated to effect a connection or disconnection between two straps. The buckle is entirely free from springs and can be operated as readily with gloved as with ungloved hands.

**JACK.**—CHARLES W. DOANE, West Lake, La. This jack comprises a body portion in which a lifting-screw is adjustable. A ratchet mechanism operates the lifting-screw, which mechanism includes a lever provided at its outer end with spaced lugs and with a block arranged centrally. An extension handle is adapted to be received between the lugs and is provided with fingers ranged to embrace the block. The jack can be operated upwardly or downwardly, and can be used for pushing heavy weights along a floor or for lifting a telegraph-post.

**SIGNAL-LANTERN.**—THOMAS M. CREPAR, Swan River, Minn. To provide a lantern for use on railroads, vessels, docks, and the like is the purpose of this invention. The lantern comprises a burner and two globes of different colors, one of the globes being fixed relatively to the burner and the other globe being movable into an active position around the burner for the lantern to display a danger-signal, or into an inactive position for the lantern to display a safety-signal.

**BOAT FOR LAND OR WATER.**—JEAN P. BOUTESQUE, Manhattan, New York city. This invention provides a combination boat and wagon. The hull of the vessel has a driving-shaft, the ends of which are adapted to receive supporting-wheels. A truck is detachably connected with the forward portion of the boat and is provided with a steering device. A propeller-shaft is adjustably geared with the drive-shaft; and the drive-shaft is, in turn, connected with a motor. Storage-chambers are provided for power. The motive agent used is compressed air.

**CONCENTRATOR.**—JOSEPH WOODHAM, Longbeach, Wash. The invention is an improvement in concentrators adapted particularly for use in connection with placer deposits. The concentrator consists essentially of a rocking, curved trough having angularly-shaped riffles extending across its bottom and stirring projections or pins projecting upwardly from its bottom. The swinging motion will cause the pins to pass back and forth through the water, while the water, by reason of its inertia, will be at rest. Consequently, the material is continually stirred, so that the gold may readily settle to the bottom and thus be collected beneath the riffles.

**CARBONATING APPARATUS.**—JOHN WALTER, Savanna, Ill. The apparatus is more especially designed for carbonating mineral waters and other liquids, and is composed of a receptacle provided with an inlet for the liquid to be carbonated, in which receptacle a float is located which controls a liquid-supply valve. A pipe extends through the float and is provided with openings in the upper and lower portion of the float, to fill the latter with gas and drain the liquid therefrom.

**NECKTIE.**—GUSTAVE SELOWSKY, Manhattan, New York city. The tip of the collar-band of a necktie is so made that it can be utilized entirely for engagement with the fastening-pin of the tie. The band is made shorter than usual, thereby economizing in material, but is nevertheless so arranged that it can be applied to a greater range of variously-sized collars than formerly.

**DEVICE FOR MAKING CIGARETTES.**—JOSEPH B. POPENHAGEN, Chicago, Ill. This invention provides a portable device for making cigarettes, which device can be comfortably carried in the vest-pocket and can be used in direct connection with a tobacco-pouch. The device may also be temporarily attached to the pocket of a garment, so that the tobacco may be drawn from its pouch, packed in a shaping-section of the device, and passed from the section into a wrapper of the usual type prepared to receive the packed material.

**PUZZLE.**—JOHN J. O'BRIEN, Manhattan, New York city. The puzzle comprises a box and a die; the box being so arranged that after inserting the die, it will be difficult to discharge the die from the box. Only a person familiar with the puzzle can thus displace the die.

**SMELTING-FURNACE.**—JOSEPH V. OTTEN, Iola, Kan. In the general method of using natural gas for fuel in zinc-smelting, there is an enormous waste and considerable expense. The present invention reduces the cost of constructing and operating smelting-furnaces by dispensing with the use of a blower-plant, the initial pressure of the natural gas (350 pounds per square inch) being found sufficient to draw in all the air necessary through properly-constructed burners. The inventor also produces a soft, glowing, flame heat in the retort chamber and avoids all blowpipe action. The flue-openings are so arranged that the heated gases pass between and around each bank of retorts before passing out at the flue-opening, which is opposite the heat-side of the retorts.

**THEATRICAL APPLIANCE.**—FREDERIC S. LOTTO, Manhattan, New York city. A patent has been granted to this inventor for an appliance which, when all its parts are assembled, will represent a piano. By pulling upon cords or ropes, the casing will fall apart, several loosely-hanging strings will be disclosed, and the piano will apparently be completely demolished; nevertheless a perfect instrument arranged in the case will remain intact.

**GATE-LATCH.**—WILLIAM A. JEFFERS, Mulberry, Ark. In a casing having a slot in its wall, a slide is mounted having shoulders working in the slot to limit the slide's movement. Keeper-fingers project outwardly from the slide, and a latch is mounted on one of the fingers and adapted to swing against the other. A pin is movably mounted in the casing and is adapted to engage any one of a series of openings in the slide so as to hold the slide adjustable. The latch can be conveniently adjusted to suit the variations in the position of the gate, and can hence be arranged to compensate for the sagging of the gate.

**DEVICE FOR SEALING PACKAGES.**—HENRY M. HUMPHREY, Plainfield, N. J. The paraffin or wax paper package has its upper edges brought together and bent upon themselves to form a fold. A sealing-plate is provided, having a flange between which and the body of the plate the fold is received and upon which fold the plate is firmly and immovably clamped, whereby a package hermetically sealed will be produced which

can be opened only by cutting or tearing off the material of which it is made.

**SASH-CORD FASTENER.**—RICHARD BOBRISCH, Chicago, Ill. The fastener has two cheek-pieces adapted to lie on each side of the sash-cord and furnished with bolt-holes through which a fastening-bolt may be passed. A finger secured to each cheek-piece is adapted to engage with the sash. A yoke joins the cheek-pieces with each other. By means of this fastener the cords may be disconnected so that the sash can be removed from the frame.

**LACING.**—PELEG J. CONGDON, Providence, R. I. This lacing is applicable to shoes and corsets, and is provided with a stiffener in the form of a split tube located at the tip of the lacing, the split clamping a side of the lacing, and giving a neat appearance to the whole.

## Designs.

**LAP-ROBE.**—MRS. MAGGIE B. SHOWN, Macon, Mo. The lap-robe is designed to rest in use upon the seat of a vehicle, to extend down below the front of the seat to the bed of the carriage, then forward. A returned portion extends up sufficiently high to protect the lap of the rider, and is provided at its sides with flaps which protect the rider at the opposite sides of the vehicle.

**RATCHET-BAR FOR WINDOW-FASTENERS.**—WILLIAM L. and CHARLES T. FIELDS, Cedar Bluff, Va. One face of the ratchet-bar is composed of a series of gradually-inclined and abruptly-ending surfaces which form shoulders adapted to receive a latch on the sash so as to hold the latter at various elevations. Below the series of inclined surfaces is a flat protuberance with the lower edge of which the latch is adapted to engage when the sash is closed so as to hold the sash in such position. The bar is also provided with a scalloped edge.

**NOTE.**—Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.

## NEW BOOKS, ETC.

**LEXIKON DER METALL-TECHNIK.** Redigiert von Dr. Josef Bersch. Vienna: A. Hartleben. 1899. 6-10 installments. Price, paper, 70 cents each.

**DIE MODERNE CHEMIE.** Eine Schilderung der Chemischen Grossindustrie. Von Dr. Wilhelm Bersch. Vienna: A. Hartleben. 1899. 6-10 installments. Price, paper, 70 cents each.

With the tenth installment both of these works have now been half completed. At the appearance of the very first parts it was evident that these books would be exceptionally broad in scope and exhaustive in treatment. The first halves as a whole certainly deserve the unstinted praise which they have received, and the remaining portions, we trust, will meet with the same favor.

**MODERN PLUMBING, STEAM AND HOT WATER HEATING.** By James J. Lawler. New York: Chiswick Publishing Company, 18 Rose Street. 1899. 8vo. Pp. 397, 300 illustrations. Price \$5.

The author has had many years of practical contact with mechanics in the construction of steam and hot water plants and plumbing work, and he has very wisely decided to elucidate his text with a large number of diagrams reproduced on a large scale. The result has been a work which can be used to advantage by every plumber even though he may not be a sanitary engineer. It is specially adapted for the plumber, the heating engineer, the builder and the architect, and all of them are sure to find something which will prove of value to them.

**HEAT AND HEAT ENGINES. A Study of the Principles Which Underlie the Mechanical Engineering of a Power Plant.** By Frederick Remsen Hutton. New York: John Wiley & Sons, London: Chapman & Hall, Limited. 1899. Pp. xxi, 553. Price \$5.

This volume supplements "The Mechanical Engineering of Power Plants" by the same author. In the present volume he deals with the question of design of apparatus and treats the subject in a thorough and scientific manner. Probably no one is better fitted than Prof. Hutton to deal with the subject on which even great authorities have failed. It is a most admirable book which we can confidently recommend to all except beginners who have some difficulty in understanding mathematics, but as a reference book for them it will be invaluable.

**LANDSCAPE GARDENING. Treatise on the General Principles Governing Out-Door Art. With Sundry Suggestions for Their Application in the Commoner Problems of Gardening.** By F. A. Waugh. New York: Orange Judd Company. 1899. Illustrated. Pp. viii, 152. Price 50 cents.

An excellent little book on the subject has been needed for some time. There are wonderful opportunities open to all architects and gardeners and we regret to say that in the majority of cases these opportunities are lost, because people do not know how to analyze or understand a landscape. The perusal of this book while it will not make landscape gardeners, will put the reader in the possession of the broad facts which underlie the science and will thus enable him intelligently to lay out small private grounds.

**Public Improvements** is the title of a new bi-monthly periodical published by the Florence Publishing Company, of 21 Park Row, New York city. It is an excellent paper devoted to municipal engineering. It contains a number of very readable articles and is not too technical. The subscription price is \$2 per annum.

## Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

Marine Iron Works. Chicago. Catalogue free.

"U. S." Metal Polish. Indianapolis. Samples free.

black, or a suitable quantity of logwood extract, 10 parts of glycerine, part absolute alcohol, 2 parts water, 1 part Venetian soap, 1/2 part salicylic acid. For red, blue, or violet, 1 part gelatine glue, 2 parts aniline of desired color, 1 part absolute alcohol, 10 parts glycerine, 1 part Venetian soap, and 1/2 part salicylic acid. The following are two additional receipts used for this purpose: Mix and dissolve 2 to 4 drachms aniline violet, 15 ounces alcohol, 15 ounces glycerine. The solution is poured on the cushion and rubbed in with a brush. The general method of preparing the pad is to swell the gelatine with cold water, then boil and add the glycerine, etc. 2. Aniline violet, 90 grains; boiling rain water, 1 ounce; to which is added a little glycerine and a small quantity of molasses. The quantities of last two ingredients will vary with the season, but half a teaspoonful will be ample for the quantities of violet and water specified.

(7725) A. C. B. asks: Is there a simple method of making oxygen? A. Oxygen may be obtained on a small scale very readily by simply heating in a close retort a mixture of 4 parts chlorate of potash and 1 part black oxide of manganese. If large quantities are desired, the continuous process of T. Du Motay may be employed. The principle of this process resides in the fact that the manganates and permanganates of potash, soda and baryta, the ferrates and chromates of the same bases, and in general all metallic oxides and acids which will form, with potash, soda, or baryta, binary compounds capable of superoxidizing, possess the property of yielding their oxygen at a more or less elevated temperature, when they are submitted to the action of a current of steam. These bodies, thus deoxidized, also possess the property of reoxidizing themselves when they are exposed to a temperature more or less great. The atmosphere is therefore the constant source from which the oxygen is derived. The mode of operation is the following: One of the binary compounds just enumerated is placed in a distilling vessel, whether at the maximum or minimum state of oxidation. If the compound is in the latter condition, it is oxidized by means of a current of air mechanically drawn over it; if at the former stage, it is deoxidized by means of a current of steam. The oxygen and steam, on issuing from the mouth of the retort, pass together into a condenser, where the steam is separated by condensation, while the oxygen passes over into a gas holder, and is there collected. When all the utilizable oxygen has been disengaged by the steaming process, the action of superoxidation by means of the air current is recommenced. By this alternate process the oxygen is generated as long as may be required.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Issued for the Week Ending

SEPTEMBER 19, 1899.

AND EACH BEARING THAT DATE.

[See note at end of list about copies of these patents.]

- Adding and subtracting machine, Ball & Riggs... 633,374
Alarm, See Burglar alarm.
Automotor horse, C. Roussel... 633,369
Awning for windows or doors, detachable, W. S. Armstrong... 633,110
Axle, divided car, S. L. Denney... 633,183
Axles and journals, means for reducing friction of, W. J. Brewer... 633,116
Back pedaling brake, Rogers & Patrick (reissue)... 633,113
Baling press, Gunlock & Thwing... 633,413
Billiard p. es, J. H. Smith... 633,395
Barrel shield, W. A. Frasier... 633,443
Basket making machine, Dufham & Devine... 633,342
Bath, See Electrotherapeutic bath
Bearings, guide frame for rolls in roller, Lockwood & Telefsen... 633,553
Bed, invalid, G. Huntington... 633,264
Belt, game, L. C. Hoffman... 633,550
Berry grader and cleaner, W. S. Middlebrook... 633,527
Bicycle brake, J. Jamieson... 633,296
Bicycle chain adjustment, A. T. Harris... 633,155
Bicycle, chainless, A. H. T. Hansen... 633,451
Bicycle driving mechanism, W. H. Abercrombie... 633,409
Bicycle frame, P. F. Duffy... 633,127
Bicycle friction gear, T. F. Feeny... 633,130
Bicycle gear, R. A. Oakman... 633,149
Bicycle hub and bearing, W. N. Whitley... 633,442
Bicycle package carrier, F. V. H. Marley... 633,396
Bicycle ratchet gear, F. E. B. Beaumont... 633,417
Bicycle saddle, pneumatic, J. J. Monahan... 633,142

Advertisements.

ORDINARY RATES.

Inside Page, each insertion, - 75 cents a line
Back Page, each insertion, - \$1.00 a line

For some classes of Advertisements, Special and Higher rates are required.
The above are charges per agate line—about eight words per line. This notice shows the width of the line, an is set in agate type. Engravings may head advertisements at the same rate per agate line, by measurement, as the letter press. Advertisements must be received at Publication Office as early as Thursday morning to appear in the following week's issue.

WOOD or METAL WORKERS
without steam power can save time and money by using our Foot and Hand Power Machinery
SENDE FOR CATALOGUES—
A—Wood-working Machinery.
B—Lathes, etc.
SENECA FALLS MFG. COMPANY,
695 Water St., Seneca Falls, N. Y.

AMERICAN PATENTS—AN INTERESTING and valuable table showing the number of patents granted for the various subjects upon which petitions have been filed from the beginning down to December 31, 1894. Contained in SCIENTIFIC AMERICAN SUPPLEMENT, No. 1002. Price 10 cents. To be had at this office and from all newdealers.

POWER & FOOT SHAPERS, PLANERS, DRILLS, LATHES, MACHINES, CUTTING TOOLS AND SUPPLIES. CATALOGUE FREE. SEBASTIAN LATHE CO. 120 CULBERT ST. CINCINNATI, O.

BARNES' New Friction Disk Drill. FOR LIGHT WORK. Has these Great Advantages: The speed can be instantly changed from 0 to 1600 without stopping or shifting belts. Power applied can be graduated to drive, with equal safety, the smallest or largest drills within its range—a wonderful economy in time and great saving in drill breakage. Send for catalogue. W. F. & JNO. BARNES CO., 1999 Ruby St., Rockford, Ill.

WOODWORKING MACHINERY. For Planing Mills, Carpenters, Builders, Furniture, Chair, Vehicle, Wheel and Spoke Makers, etc. Correspondence Solicited. Illustrated 312-page Catalogue free to manufacturers and foremen. THE EGAN CO., 327 to 347 West Front Street, CINCINNATI, OHIO.

The Fraction of a Hair's Breadth implies the most minute accuracy and it applies particularly to that wonderfully precise tool shown in cut—the Eight-inch Precision Lathe. Bed, 40 inches long, of the grade cast iron, milled and scrape finish, 8-inch swing, 22 inch between centers. Plain turning and endless other operations may be performed with this tool. Every part built to last and guaranteed. Manufactured by FANEUIL WATCH TOOL CO., Brighton, Boston, Mass.

THE EUREKA CLIP The most useful article ever invented for the purpose. Indispensable to Lawyers, Editors, Students, Bankers, Insurance Companies and business men generally. Book marker and paper clip. Does not mutilate the paper. Can be used repeatedly. In boxes of 100 for 25c. To be had of all bookellers, stationers and notion dealers, or by mail on receipt of price. Sample card, by mail, free. Manufactured by Consolidated Safety Pin Co., Box 21, Bloomfield, N. J.

NEVERSLIP Bar Belt Dressing TRADEMARK. It gives a smooth, pliable and adhesive surface, and saves Belts, Power and Wear of Machinery Bearings. Also adapted to Canvas and Rubber Belts. Box of 12 Bars, \$3.00, sent on Trial. The White & Bagley Co., Worcester, Mass., U. S. A.

A REVOLUTION. It cuts at all angles from vertical to horizontal. For general and manufacturing purposes, the new Van Norman "Duplex" Milling Machine will be found the best for the following reasons: It greatly increases the range of work; it insures greater accuracy when variety of cuts are required; it economizes time in performing many kinds of work; it economizes in cutters and fixture for holding work. Write for particulars to Waltham Watch Tool Co., Springfield, Mass.

ARMSTRONG'S PIPE THREADING AND CUTTING-UP MACHINES Both Hand and Power. Sizes 1 to 6 inches. Water, Gas, and Steam Fitters' Tools, Hinged Pipe Vises, Pipe Cutters, Socks and Dies, universally acknowledged to be THE BEST. Send for catalog. THE ARMSTRONG MFG. CO., Bridgeport, Conn.

The Coburn Patent Trolley Track Store Ladders. A PAIR OF STAIRS ALL ALONG THE LINE OF SHELVES. Send for Book. The Coburn Trolley Track Mfg. Co., HOLYOKE, MASS.

BICYCLE TIRE REPAIRING.—THE Mending of Single Tube Tires.—A practical article illustrating the method of inserting patches and plugs with pliers and pluggers, together with rubber band plugging and the use of puncture bands. 9 illustrations. Contained in SUPPLEMENT 110-2. Price 10 cents. For sale by Munz & Co. and all newdealers.

You spend thousands on coal bills—but how much to save the steam? Want to know more about it?—Ask for our booklet "H" on the HEINTZ STEAM TRAP. WILLIAM S. HAINES CO., 136 South Fourth St., Philadelphia, Pa.

DAY AND NIGHT while time endures, there is hourly need for knowing the correct time. Ruby Jeweled Elgin Watches have a lifetime of accurate service—the test of thirty-five years having gained for them the title of "The World's Standard." Sol by jewelers everywhere. An Elgin watch always has the word "Elgin" engraved on the works—fully guaranteed. Send for new free booklet. ELGIN NATIONAL WATCH CO., Elgin, Ill.

ACETYLENE All about the New Lighting Gas. The Pan-American Acetylene Co. has to state that after having become fully convinced of the superiority of the low-priced Beacon Special Generator, which was offered by the Beacon Acetylene Co. until September 1, at the special price of \$12.50, including two burner tips, one brass storage cylinder, with six foot web-ported hose, and five pounds of carbide, they have purchased the controlling interest in the same. The above special offer is hereby extended until further notice to encourage the dissemination of acetylene. Cash must accompany the order. Pan-American Acetylene Co., 455-493 Elliptic Square, Buffalo, N. Y.

The Forbes Patent Die Stocks for Hand Power Ten inch pipe cut off and threaded by one man with ease. Send for Catalogue. CURTIS & CURTIS, No. 56 Hand Machine Range 2 1/2 to 6 inch 6 Garden St., Bridgeport, Conn.

Have you ever seen or heard of the AUTOMATIC TIME STAMP? It is run by a clock, and imprints the exact hour, minute and second (A.M. or P.M.) the date, the firm name, and words indicating the character of a transaction, such as "Received," "Answered," "Ordered," "Rec'd," etc., etc., upon letters, telegrams, orders, documents, etc., and for keeping an indisputable record of the time, billiard tables, bicycles, boats, carriages, messengers, etc., are used. Send for Circular. AUTOMATIC TIME STAMP CO., 160 A Congress St., Boston, Mass., U. S. A.

For Heavy Continuous Work every machine shop will commend our Power Pipe Threading and Cutting Machine. Cones are central over machine, equalizing the weight. Within the cones are compound gears giving six chances of speed. Gears require no extra space, and are protected from dust or accident. Chases can be opened, threaded pipe removed, another inserted and cut without stopping machine. Send for Catalogue. THE MERRILL MFG. CO., 501 Curtiss Street, TOLEDO, Ohio.

HOW TO MAKE AN ELECTRICAL Furnace for Amateur's Use.—The utilization of 110 volt electric circuits for small furnace work. By N. Monroe Hopkins. This valuable article is accompanied by detailed working drawings on a large scale, and the furnace can be made by any amateur who is versed in the use of tools. This article is contained in SCIENTIFIC AMERICAN SUPPLEMENT, No. 1182. Price 10 cents. For sale by MUNN & Co., 361 Broadway, New York City, or by any bookseller or newsdealer.

DEFIANCE MACHINE WORKS BUILDERS OF HUB, SPOKE, WHEEL, BENDING, WAGON, CARRIAGE, AND HOOP MACHINERY. SEND FOR CATALOGUE.

PATENT PROTECTION Cuba, Porto Rico, AND THE Philippines. Owners of United States Patents, Trade Marks, Prints and Labels may procure protection in the Colonial possessions of the United States by effecting registration in these countries. The expense is very slight and the protection acquired by such registration should be secured without delay. For terms and full information, address MUNN & CO. PATENT SOLICITORS, 361 BROADWAY, NEW YORK, WASHINGTON, D. C.
