

which bears against the frog of the hoof. At its lower face the plate has a bar or shoe constructed and arranged with relation to the plate in such a manner as to protect the hoof more effectively than the devices heretofore provided.

SCREEN FOR STAMP-MILLS.—MARTIN R. DRISCOLL, Frisco, Utah. The mill has an apertured frame above which a roll of screen material is mounted, having a portion extending over the aperture. A clamping-frame extends about the lower and side edges of the aperture and covers the edge of the screen material. The frame has vertically-extending bolt-recesses in its side-bars, clamping-bolts within the recesses and an auxiliary clamping-bar engaging the outer face of the lower side of the clamping-frame. By loosening the clamping frames and bars the screen-cloth can be pulled down to bring an unused portion into use without stopping the battery.

SEWING-MACHINE SHUTTLE.—PERCY H. HEWITT, EDWIN A. COCKLE, and CHARLES MATTHEWS, London, England. An improved construction of shuttle is provided by these inventors, whereby the disadvantages incidental to the use of a special spool of small capacity are avoided. The shuttle has its case divided longitudinally into two parts, which parts are provided at their heels with interlocking projections and recesses engageable by a relative longitudinal movement of the parts and permitting a slight hinging action. One part has a transverse pin at its point and the other a longitudinal slot receiving the pin. On the point end of one part is a spring, engaging a catch on the other and straining the parts longitudinally to hold the interlocking parts in engagement.

WATER-WHEEL.—PATRICK HENRETTY, Belgrade, Minn. The water-wheel comprises pulleys provided at intervals with peripheral sockets. The bucket-chain used consists of a series of buckets equally flared on both sides of a central line and provided at their juncture with eyes. Through the overlapping eyes of adjoining buckets a shaft is passed, provided alongside of the buckets with rollers operating in the sockets of the pulleys. Links connect adjacent shafts outside the rollers.

SHANK FOR CORNETS.—WILLIAM H. HORN, San Francisco, Cal., and CHARLES L. WAIN, Kamloops, Canada. The shank is arranged to permit the performer to set his cornet to different keys without requiring separate shanks. The shank is made in two sections sliding one within the other, the outer section having a head with internal threads and the inner section having two external threads capable each of engaging with the threads of the head to hold the inner section in either one of two positions.

CHIMNEY TOP OR VENTILATOR.—JOSEPH A. HODEL, Baltimore, Md. The novel features of this invention are found in the effective method of securing the base-plate to the chimney by means of anchor-bars, in supporting the top carrying the cow by means of strong slender standards so that no obstruction is offered to the free outlet of smoke from the flue pipe, in securing the vane directly to the bearing-piece, while the guard-plate is held thereto by means of arms, and in the novel method of counterbalancing the guard-plate and vane. The merits of the invention lie in the uninterrupted passage provided for the smoke, in the prevention of downdraft, and in the counterbalancing of the moving parts.

Designs.

HAMMER-HEAD.—DANIEL S. WILLIAMS, Salida, and FREDERICK R. WATERS, Ouray, Col. The leading feature of the design is the form of the flared groove or socket in the side of the polygonal hammer-head.

ORNAMENTED STONE FOR JEWELRY.—JOSEPH L. HERZOG, Manhattan, New York city. The design consists of an elk's head produced upon a background of stone.

SHOE-LACE FASTENER.—GEORGE H. RICHARDS, Memphis, Tenn. To prevent the tearing of the shoe-lace and yet to hold the lace securely in place, the inventor forms the head of the fastener on its under side with a spherical surface.

CREAM-SEPARATOR.—CHARLES S. HANNA, West Hebron, N. Y. The design consists of a cylindrical body having a base and an inverted cone-shaped bottom terminating at its apex in a gage with a faucet.

NOTE.—Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.

NEW BOOKS, ETC.

THE MANUFACTURE OF SAUSAGES. By James C. Duff, S.B. New York: National Provisioner Publishing Company, 1899. Pp. 131. 16mo. Price \$2.

This is the first and only book on sausage making printed in English and there has been a considerable demand for a good book on this subject. The book will pay its cost many times over to even the smallest retail butcher, while to the sausage maker it will prove invaluable. Not only is information regarding meats, spices, casings, stuffings, etc., given in great detail but there are almost endless receipts for all kinds of standard and fancy sausages, some of the names of which recall far-away Strasburg and Nuremberg. It is an admirable book and the literature relating to provisions is so limited that we welcome every addition made to it.

DESCRIPTIVE MENTALITY FROM THE HEAD, FACE AND HAND. By Holmes Merton. Philadelphia: David McKay, 1899. Pp. 220. 8vo. 600 illustrations. Price \$1.50.

It is probable that we all use physiognomy more or less to judge of character, and yet it is only reasonable to believe that those who are constantly engaged in studying this subject may carry it out to a remarkable degree. We do not believe that character can be told to any extent by the lines of the hand, but there are many people who think that it can, and to them the latter half of the book will undoubtedly appeal.

Business and Personal.

The charge for insertion under this head is One Dollar a line for each insertion; about eight words to a line. Advertisements must be received at publication office as early as Thursday morning to appear in the following week's issue.

Marine Iron Works. Chicago. Catalogue free. "U. S." Metal Polish. Indianapolis. Samples free. Gasoline Brazing Forge, Turner Brass Works, Chicago.

Inventions developed and perfected. Designing and machine work. Garvin Machine Co., 141 Varick St., N. Y.

The celebrated "Hornsby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Refrigerating Machine Company. Foot of East 138th Street, New York.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4. Munn & Co., publishers, 361 Broadway, N. Y.

The Milling Cutter Department of The L. S. Starrett Co. will be continued under the firm name of Gay & Ward, Athol, Mass. Owing to the increased business of the tool department, Mr. Starrett has withdrawn his interest in the milling cutter department, in order to devote his attention exclusively to the manufacture of fine tools. Messrs. Gay & Ward still continue to manufacture milling cutters under the immediate supervision of Mr. Gay, with increased facilities for producing an unsurpassed line of cutters.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway, New York. Free on application.

Notes & Queries

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all either by letter or in this department, each must take his turn. Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(7703) W. G. B. says: Have you published a formula for making an ink that would do to write on photographic negatives (for numbering them, etc.) with an ordinary pen? If so, kindly advise me the number of the copy in which the above formula can be found. A. To print the name on the photograph, several methods may be adopted. The simplest is to write the title of the subject on a slip of paper with aniline copying ink, or with ordinary copying ink mixed with gamboge or vermilion. Then slightly dampen the surface of the negative near the bottom right or left hand corner in as unobtrusive and unimportant a portion of the picture as possible. Press down the paper with the writing upon it. Leave for a few minutes and then remove the paper, when the writing will be found to have adhered to the negative. When printed, the name will print out white. Another way is to write backward on the negative, while another and better plan is to write the name in Indian ink on the surface of the paper before it is printed on. The ink will wash off in the after operations and leave the name in white where the surface of the paper has been protected by the ink.

(7704) J. W. M. writes: There has been quite a discussion here caused by your article on the 16-inch gun. The question is, "What is the fall of the curve of the water when looking one mile out to sea?" Or rather the ratio. For instance, the first mile view will have a fall of 8 inches. What will the second mile show? A. Allow for refraction of the atmosphere and the earth's curvature when looking out to sea:

Table with 2 columns: Distance (miles) and Fall (feet). For 1 mile, 0.57 feet; 2 miles, 2.29; 3 miles, 5.14; 4 miles, 11.60; 5 miles, 14.3; 10 miles, 57.2; 20 miles, 357.0; 50 miles, 14290; 100 miles, 57170.

(7705) D. McC. writes: Replying to J. W. B., No. 7689, of Notes and Queries, in SCIENTIFIC AMERICAN of July 22, 1899, would say that the "Magical" or "Mineral" sponge he inquires about is made of 25 pounds common whiting, 4 ounces powdered soap bark and 4 ounces powdered alum, thoroughly mixed and inclosed in a small cotton flannel bag (size to fit the hand), with the "fuzzy" side out and tightly sewed up. To use, thoroughly soak in water and rub article to be polished afterward rubbing dry with another cloth. After using the sponge (it becomes dry and hard, but can be again used until worn out by pounding the cake inside the cloth to a powder.

(7706) J. J. H. asks: Will you please answer through your paper at what degree does aluminum melt and what metals it will melt with, and oblige a forty-six year reader of your paper. A. Aluminum melts at 625 degrees C. or 1,157 degrees Fah. It can be alloyed with copper, nickel, tungsten, manganese, chromium, zinc, tin, and titanium.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Issued for the Week Ending

JULY 25, 1899.

AND EACH BEARING THAT DATE.

(See note at end of list about copies of these patents.)

- Accumulator plate, H. F. Hobel... 629,363
Aerial machine operating device, J. H. Lowering... 629,361
Addressing machine, H. R. Grassmann... 629,443
Aeration of liquids in bottles, means for effecting, K. S. Murray... 629,752
Air brake, E. Bartholomew... 629,708
Ammunition, A. Laughlin... 629,514
Arch center, J. S. White... 629,636
Back peeling brake, F. H. Lippincott... 629,514
Bar. See Typewriter's rack bar.
Barrel washer, J. Faust... 629,743
Basin, wash, J. Totham... 629,628
Batter machine, J. P. Roberson... 629,607
Battery. See Secondary battery. Storage battery.
Bead adjuster, stop, U. G. McQueen... 629,699
Bearing, W. D. Sargeant... 629,395
Bearing ball, L. Horn... 629,564
Beating for carpet sweeper, Ball, F. C. Mason... 629,518
Beater and sifter, J. C. Roberts... 629,638
Beetle ball, W. H. Perkins... 629,598
Bench. See Work bench.
Bending structural shapes, machine for, S. E. Diescher... 629,498
Bicycle, W. J. ... 629,376
Bicycle driving gear, C. H. Spence... 629,622
Bicycle driving gear, C. Westall... 629,655
Bicycle frame, T. D. McCall... 629,555
Bicycle or like vehicle frame, L. B. Smyser... 629,401
Bicycle pedals, etc., foot grip for, A. G. Tomkies... 629,627
Bicycle seat, H. T. Miller... 629,497
Bicycle steering device, tandem, F. L. Bryant... 629,335
Blank feeding device, C. H. Fogg... 629,441
Blind rolling, R. Richter... 629,524
Boat detaching apparatus, hook for, C. Mackeprang et al... 629,383
Boiler, W. J. ... 629,345
Boiler cleaner, W. H. Holcomb... 629,583
Boiler furnace, A. P. Ritzos... 629,606
Boiler furnace, down draft, F. Girtanner... 629,350
Boiler tubes, means for fastening, T. Huber-Deau... 629,690
Bottle and implement, J. Bertram... 629,537
Bottle, anti-rattling, E. De Anguera... 629,518
Bottle stopper, J. W. Smith... 629,619
Box. See Garbage box.
Box fastener and seal, W. C. Rarig... 629,523
Box or case, F. McIntyre... 629,586
Boxes, apparatus for shaping lids of sheet metal, P. Carbone... 629,546
Brake, H. J. Warmington... 629,483
Branding cattle, liquid for, H. W. Scott... 629,526
Bread board and holder, H. J. Abernathy... 629,416
Brooch safety device, E. L. Logee... 629,580
Brush electrical chair, A. J. Cook... 629,340
Brush holder support, N. B. ... 629,418
Buckle, belt, S. Bodwell... 629,486
Burner. See Gas burner. Vapor burner.
Burner, H. M. Hamrick... 629,355, 629,357
Cabinet or paper case, J. T. Hoyt... 629,566
Cabinet, paper, J. T. Hoyt... 629,565
Camera, multiple attachment for photographic, T. J. Burfield... 629,542
Can. See Liquid holding can.
Can capping machine, Letson & Burpee... 629,574
Can end forming die, J. M. K. Letson... 629,575
Can for petroleum, etc., J. R. Boulton... 629,332
Cane and umbrella, combined, J. H. Nagel... 629,460
Car coupling, J. W. Dury... 629,344
Car coupling, P. C. Ewart... 629,497
Car coupling, T. L. McKeen... 629,587
Car coupling, I. S. Lemire... 629,614
Car coupling, T. H. Smith... 629,422
Carriage, C. ... 629,422
Car dust conveyer, C. B. Ebridge... 629,346
Car, street, W. J. Fernandez... 629,498
Cars or vehicles, controller for electric motor, S. H. Short... 629,398
