Business and Personal.

Marine Iron Works. Chicago. Catalogue free. "U. S." Metal Polish. Indianapolis. Samples free. Yankee Notions. Waterbury Button Co., Waterb'y, Ct

Handle & Spoke Mchy. Ober Mfg. Co., 10 Bell St.

Automobiles built to drawings and special work don promptly. The Garvin Machine Co., Spring and Varick Streets, New York.

The celebrated "Hornsby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Refrigerating Machine Company. Foot of East 138th Street, New York.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4. Munn & Co., publishers, 361 road way, N. Y.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 351 Broadway New York. Free on application.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply total nather by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised mour columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected whout remuneration.

Scientific American Supplements referred

scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price.

Minerals sent for examination should be distinctly marked or labeled.

(7967) I. W. C. asks: Can a ball (steel or any other kind) be made so round, and some flat surface made so smooth, that there will be no friction caused by the ball rolling over the smooth surface; or would there be friction by their not being perfectly round or smooth? A. Friction cannot be entirely eliminated in rolling bodies, however apparently perfect the surface of ball and plane may be made, but it may be made so small to be practically immeasurable and less than the air friction on the surface of such rolling bodies.

(7968) G. W. R. asks: 1. An armature coil as in Supplement, No. 641, but with only eight coils each having 34 convolutions of No. 18 B. S. single cottoncovered magnet wire, about 15 feet of wire in each coil, would itwork all right wound this way? A. There is no reason why the motor should not workall right, but there is no reason also why it should not give you less power. You reduce the magnetic force by reducing the number of turns on the armature. 2. Would it make any difference if the coils are not exactly the same distance apart? A. No great difference. 'They should however be equally spaced. 3. How much wire must be wound on magnet core, the same as in SUPPLEMENT, No. 641, and what size wire? A. Wind as described in SUPPLEMENT, No. 641. You would better rewind your armature if you want a motor like the one described in SUPPLEMENT. We have to say a great many times, do not change the printed designs. It is not likely that the change will be an improvement. The designs were made by men of experience and skill, and are right as they are. Any change is likely to result in a reduction of efficiency. 4. Is single cotton-covered wire the best for motor, or is the double the best for motor? A. Single covered wire is good enough for use in a motor to be run with eight cells of battery. 5. Is a commutator with eight segmental parts 5% inch diameter, 3% inch wide, large enough for the above motor? A. A commutator with eight segments and eight coils of the same size as when twelve segments are used has only two-thirds as many turns as in the original design, and therefore only two-thirds as much power is produced at the armature. 6. What does this mean -30 ampere hours on battery? A. Thirty ampere hours means one ampere working thirty hours, or any number of amperes which the current has working long enough to ive thirty when the amperes and the time are multiplied together. The battery for this motor will give perhaps five amperes at best working strength. Five multiplied by six gives thirty. The battery will in such a case be exhausted in six hours. 7. What horse power would this motor be? The armature and magnet core are the same as in Supplement, No. 641. A. The horse power is determined as follows: Eight cells of the battery have about sixteen volts. If they are drawn upon to the rate of five amperes, the output is $16 \times 5 = 0$ watts. Now 746 watts are one electrical horse power. The battery will yield about one-tenth of a horse power for six

(7969) W. E. H. asks: 1. How could I make a liquid air motor at a moderate cost? A. We do not know, since no such a thing has been put upon the market as a liquid air motor at moderate cost. 2. will I find a description of the same? A. Apply to the Liquid Air Companies which advertise that ther have such a motor. 3. Where will I find a description of how to make the apparatus with which to make liquid air ? A. In Sloane's "Liquid Air," price \$2.50 by 11. 4. How many horse power would you think it would take to run a sixteen foot row boat? A. 11/2 to 2 heree power is required for a 16-foot boat. 5. Where would I find a description for making one of that number horse power? A. We know of no description of a liquid air motor. An illustrated description of how to build a 16 foot boat is contained in Scientific American Supplement, No. 36. Ten cents, mailed. 6. Where could I get a screw propeller? A. Any maker or dealer in steam or naphtha launches can supply you with one. 7. How large shortd it be? A. Propeller should be 14 inches diameter.

READY OCTOBER 15.

PROGRESS OF INVENT

By EDWARD W. BYRN, A. M.

LARGE OCTAVO. 480 PAGES. 300 ILLUSTRATIONS. PRICE \$3.00 BY MAIL, POSTPAID TO ANY COUNTRY IN THE WORLD. HALF RED MOROCCO, GILT TOP, \$4.00.

Readers of the SCIENTIFIC AMERICAN are aware to what extent it has devoted itself for more than half a century, to chronicling the great inventions and discoveries of the present century, and to worthily commemorate the completion of the ninet century its publishers are about to bring out a scholarly and interesting volume which will present in concrete form the great scientific and engineering achievements

of the century. The chapters give a most comprehensive and coherent account of the progress which distinguishes this as the "golden age of invention," resulting in industrial and commercial development which is without precedent. A chronological calendar of the leading inventions is one of the important features of the book, enabling the reader to refer at a glance to the inventions and discoveries of any particular year. The book is printed with large type, on fine paper, and is elaborately illustrated by 300 engravings and is attractively bound.

Every reader of the Scientific American should possess a copy of this unique

and timely publication.

The following is a brief Table of Contents. Chapter I-The Perspective View. H-Chronology of Leading Inventions of the Nineteenth Century. III-The Electric II-Chronology of Leading Inventions of the Nineteenth Century. III-The Electric Telegraph. IV-The Atlantic Cable. V-The Dynamo and Its Applications. VI-The Electric Motor. VI-The Electric Light. VIII-The Telephone. IX-Electricity, Miscellaneous. X-The Steam Engine. XI-The Steam Railway. XII-Steam Navigation. XIII-Printing. XIV-The Typewriter. XV-The Sewing Machine. XVI-The Reper. XVII-Valcanized Rubber. XVIII-Chemistry. XIX-Food and Drink. XX-Medicine. Surgery and Sanitation. XXI-The Bicycle and Automobile. XXII-The Phonograph. XXIII-Optics. XXIV-Photography. XXV-The Roentgen or X-Rays. XXVI-Gas Lighting. XXVII-Civil Engineering. XXVIII-Woodworking. XXXII-Icydid Air. XXXIV-Metal Working. XXX-Fire Arms and Explosives. XXXI-Textiles. XXXII-Ice Machines. XXXIII-Liquid Air. XXXIV-Minor Inventions. XXXV-Epilogue.

A full Table of Contents, with samples of illustrations, is now ready and will be sentfree to any address, and the book will be ready for distribution. October 15th.

the book will be ready for distribution October 15th. MUNN & CO., Publishers, Scientific American Office, 361 Broadway, New York.

ARMSTRONG'S No. O THREADING MACHINE

Can be attached to bench or post.

Designed for threading the smaller sizes of pipe, iron or brass, also bolts. Has two speeds, one for pipe ½ to 1 inch; the other for pipe 1½ to 2 inches, inclusive. Uses the regular Armstrong adjustable dies. Other attractive features. Send for particulars. The Armstrong Mfg. Co., 139 Centre Street, New York. Bridgeport, Conn.

BALL BEARING AXLES AND RUB ber Tires.—A paper read before the Carriage Builders' National Convention, Philadelphia, October, 1891, showing the advantage to be derived from the use of ball bearings and pneumatic tires in road vebicles. Contained in Scientific American Supplement, No. 99-2. Price 10 cents. To be had at this office and from all newsdealers.

Prices \$160 and up. Send for Catalogue,

Picturesque and Sportsman's Paradise.

Mount Pocono, a charming spot in the highest part of the Pocono Mountains, from which the Delaware Water Gap and the Delaware River may be seen, is reached by the Lackawanna Railread. Firs and pines cover the mountain sides. The climate is said to be extremely healthful. People suffering from asthma or hay fever go there. There are several hotels, of which the Ponoco Mountain House and the Wiscasset are perhaps the largest. Dingman's Ferry, in the Delaware Highlands, is about 25 miles from the Gap, and may be reached by stage from Stroudsburg, on the line of the D., L. & W. The region is picturesque, and much frequented by sportsmen. Blooming Grove Park, the hunting preserve, is near by,—Review of Reviews.
