Marine Iron Works, Chicago, Catalogue free.

"U.S." Metal Polish. Indianapolis. Samples free

Yankee Notions. Waterbury Button Co., Waterb'y, Ct. Handle & Spoke Mchy. Ober Mfg. Co., 10 Bell St.,

Most durable, convenient Metal Workers' Crayon is made by D. M. Steward Mfg. Co., Chattanooga, Tenn.

Ferracute Machine Co., Bridgeton, N. J., U.S. A. Full line of Presses, Dies, and other Sheet Metal Machinery.

Automobiles built to drawings and special work done promptly. The Garvin Machine Co., Spring and Varick Streets, New York.

The celebrated "Hornsby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Refrigerating Machine Company. Foot of East 138th Street, New York.

The best book for electricians and beginners in elec tricity is "Experimental Science," by Geo. M. Hopkins By mail, \$4. Munn & Co., publishers, 361 Broadway, N. Y.

Send for new and complete catalogue of Scientific and other Books for sale by Munn & Co., 361 Broadway. New York. Free on application.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication.

References to former articles or answers should give date of paper and page or number of question.

Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to nurchase any article not advertised

or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of

Minerals sent for examination should be distinctly marked or labeled.

(7926) W. S asks: 1. Why is it that the image on the ground glass of a camera appears upside down? A. Because the rays of light cross as they pass through the opening of the lens. Take the lens of from the camera, put in its place a piece of card through which a small hole has been made and you will see the picture inverted in the same way. The rays from the top of an object pass in a straight line through the hole and must go to the bottom of the ground glass. So too rays from the bottom of an object go to the upper part of the ground glass. The picture is inverted up and down and right and left. 2. Are there any cameras on the market, that have devices so that the image appears right side up? A. No. A right angled prism could be attached to the lens so as to erect the picture, but it is not worth while. 3. What solution combined with a solution of ferric chloride will make a green solution A. Ferric chloride in solution will become green by com-bining it with any solution of a sulphate which by metathesis will produce ferric sulphate. 4. Is there any book on navel orange growing? A. The Scientific American, vol. 82, No. 21 contains an article on the navel We can send itto you for ten cents

(7927) C. D. R. asks: Can you give me a receipt for transparent etching ground, for retouching Silicate of soda is transparent, but leaves a ragged edge in the lines. Is there anything I could add to it for the purpose that would not destroy its transparency? A. Retouching varnish, Sandarc 1 oz., Castor oil 80 grains,

(7928) F. C. asks: How can I cover a pulley with paper or leather? Pulley is of cast iron 9 inches by 8 inches with an extra smooth face. A. Scratch the face of the pulley with a rough file thoroughly, so that there are no bright or smooth places. Then swab the surface with a solution of nitric acid, 1 part; water, 4 parts; for 15 minutes; then wash with boiling hot water. Having prepared a pot of the best tough glue that you can get, stir into the glue a half ounce of a strong solution of tannic acid, oak bark or gall nuts, as convenient to obtain, to a quart of thick glue; stir quickly while hot and apply to the paper or pulley as convenient, and draw the paper as tightly as possible to the pulley, overlapping as many folds as may be required. By a little management and moistening of the paper, it will bind very hard on pulley when dry, and will not come off or get loose until it is worn out. Use strong hardware wrapping paper.

(7829) DeF. H. asks: 1. How many scribed in "Experimental Science" give? A. Each cell gives an average of 1.8 volts, so that .in series you would have 1.8×8 or about 14 volts. In parallel it give 1'8 volts. The amperes depend upon the external resistance principally, since the internal resistance is very small. You can safely take 4 amperes. 2. How long can this battery be used without decreasing in strength? A. Any battery begins to be exhausted as soon as it begins to do work, of course. You will obtain about 60 ampere hours from the battery, before renewing the solution. The zincs will last a long time. the carbons indefinitely. 3. What would the materials for this battery cost (approximately)? A. If you can make the case, windlass, etc., the cost is much reduced. The jars, plates, and other materials, will cost about \$15. 4. Directions for making a small and inexpensive Ruhmkorff induction coil giving a 1 inch spark, for use with the two chromic acid cells? A. You will find the directions, full instructions with drawings, in Bonney's "Induction Coils." Price by mail, \$1. The coil described in "Experimental Science" is a good one, and gives a longer spark. It will cost but a little more than one giving an inch spark.

(7930) L. E. T. writes: Steel being a conductor of electricity, why is it that the steel balls used in the coherer of a wireless telegraph system, being in contact with one another as they are, do not make a continuous circuit in the receiving apparatus. A. Steel balls in the ordinary sense of the word have not been used in the coherer of the wireless telegraph so far as we are informed. 'The coherer contains a powder, composed of metal filings. Various metals have been employed simple or mixed. Any powder, even of a conductor, is a very poor conductor. The principal reason is that the particles are not in close contact with one another. When an electric wave strikes this powder, its electrical resistance is very greatly reduced, as if the particles had cohered. This state continues till a jar is given to the powder, when the high resistance is restored. See Fahie's "History of Wireless Telegraphy." Price \$2 by

TO INVENTORS.

An experience of over fifty years, and the preparation of more than one hundred thousand applications for patents at home and abroad, enable us to understand the laws and practice on both continents, and to possess unequaled facilities for procuring patents everywhere A synopsis of the patent laws of the United States and all foreign countries may be had on application, and persons contemplating the securing of patents, either at home or abroad, are invited to write to this office for prices, which are low, in accordance with the times and our extensive facilities for conducting the business. Address MUNN & CO., office Scientific American, 361 Broadway, New York.

Corn removing device, B. Wagner... Corset, apparel, D. Kops.....

AMERICAN PATENTS. - AN INTER-AMBRICAN FAIENTS.— AN UNIEST esting and valuable table showing the number of patents granted for the various subjects upon which petitions have been filed from the beginning down to December 31, 1834. Contained in SCIENTIFIC AMERICAN SUPPLEMENT, No. 1402. Price 10 cents. To be had at this office and from all newsdealers.

ATHES. SEBASTIAN LATHE CO. 12 OCCUPENTS.

Foot and Power and Turret Lathes, Plan-SHEPARD LATHE CO., 133 W. 2d St., Cincinnati, O.

Water Emery Tool Grinder

Has no pumps, no valves. No piping required to supply it with water. Always ready for use. Simplestin construction, nostefficient n operation.

Bernd for catalogue and prices.

W. F. & JNO. BARNES CO. 1999 Ruby St., Rockford, III.

THE EUREKA CLIP The most useful article ever invented for the purpose. Indispensable to Lawyers, Editors, Students, Bankers, Insurance Companies and business men generally. Book marker and paper clip. Does not mutilate the paper. Can be used repeatedly. In boxes of 100 for 25c. To be bad of all booksellers, stationers and notion dealers, or by mail on receipt of price. Sample card, by mail, free. Manufactured by Consolidated Safety Pin Co., Box 121, Bloomfield, N. J.

PATENT TROLLEY

Parlor, Barn and Fire Door Hangers All Styles.

Latest Improvements. Coburn Trolley Track Mfg. Co. Holyoke, Mass.

Physical and School Apparatus

GALVANOMETERS STANDARD, SINE, TANGENT,

REFLECTING and WIEDEMANN GALVANOMETERS . .

12-inch Pipe cut off and Threaded with ease by one

> FORBES PATENT DIE STOCK,

Smaller sizes proportionately easy. Send for Catalogue.
THE CURTIS & CURTIS CO.,
Garden Street. Bridgeport, Conn.

Adjustable Scriber. A knurled and nickeled hollow sleeve, eled hollow sleeve, elamping demand and market states and ma clamping de different vice at each end tools. Made in 8 in. and 12 in. lengths. Price of either size, 50c. Knife point for pattern makers, 15c. extra. 15 Catalogue of Fine Tools free. The STARRETT co. 15. Athol. U.S. .

Can be attached to bench or post. Desiened for threading the smaller sizes of pipe, iron or brass, also bolts. Hast wo speeds, one for pipe ½ to 1 inch; the other for pipe 1½ to 2 inches, inclusive. Uses the regular Armstrong adjustable dies. Other attractive features. Send for particulars. The Armstrong Migs. Co., 139 Centre Street, New York. Bridgeport, Conn.

If You Want the Best Lathe and Drill GHUCKS = Strongest Grip, Great-est Capacity and Durabil-ip and Accurate. Westcott Chuck Co., Oneida, N. Y., U. S. A Ask for catalogue in English. French, Spanish or German FIRST PRIZE AT COLUMBIAN EXPOSITION, 1893.

san attach
ment to our 8-inch Precision

Lathe is exceedingly useful in
cases where it is necessary to put a
key-seat in as small a hole as
a cutter may be made to stand
the work. From 40seconds to
2 minutes suffices to put a keyseat in a hole ¼ in, diameter
and ¼ in. long-it depends on
the metal. This is acknowlsable in all up-to-date shops throughout the country.
